更多关于快速排序法

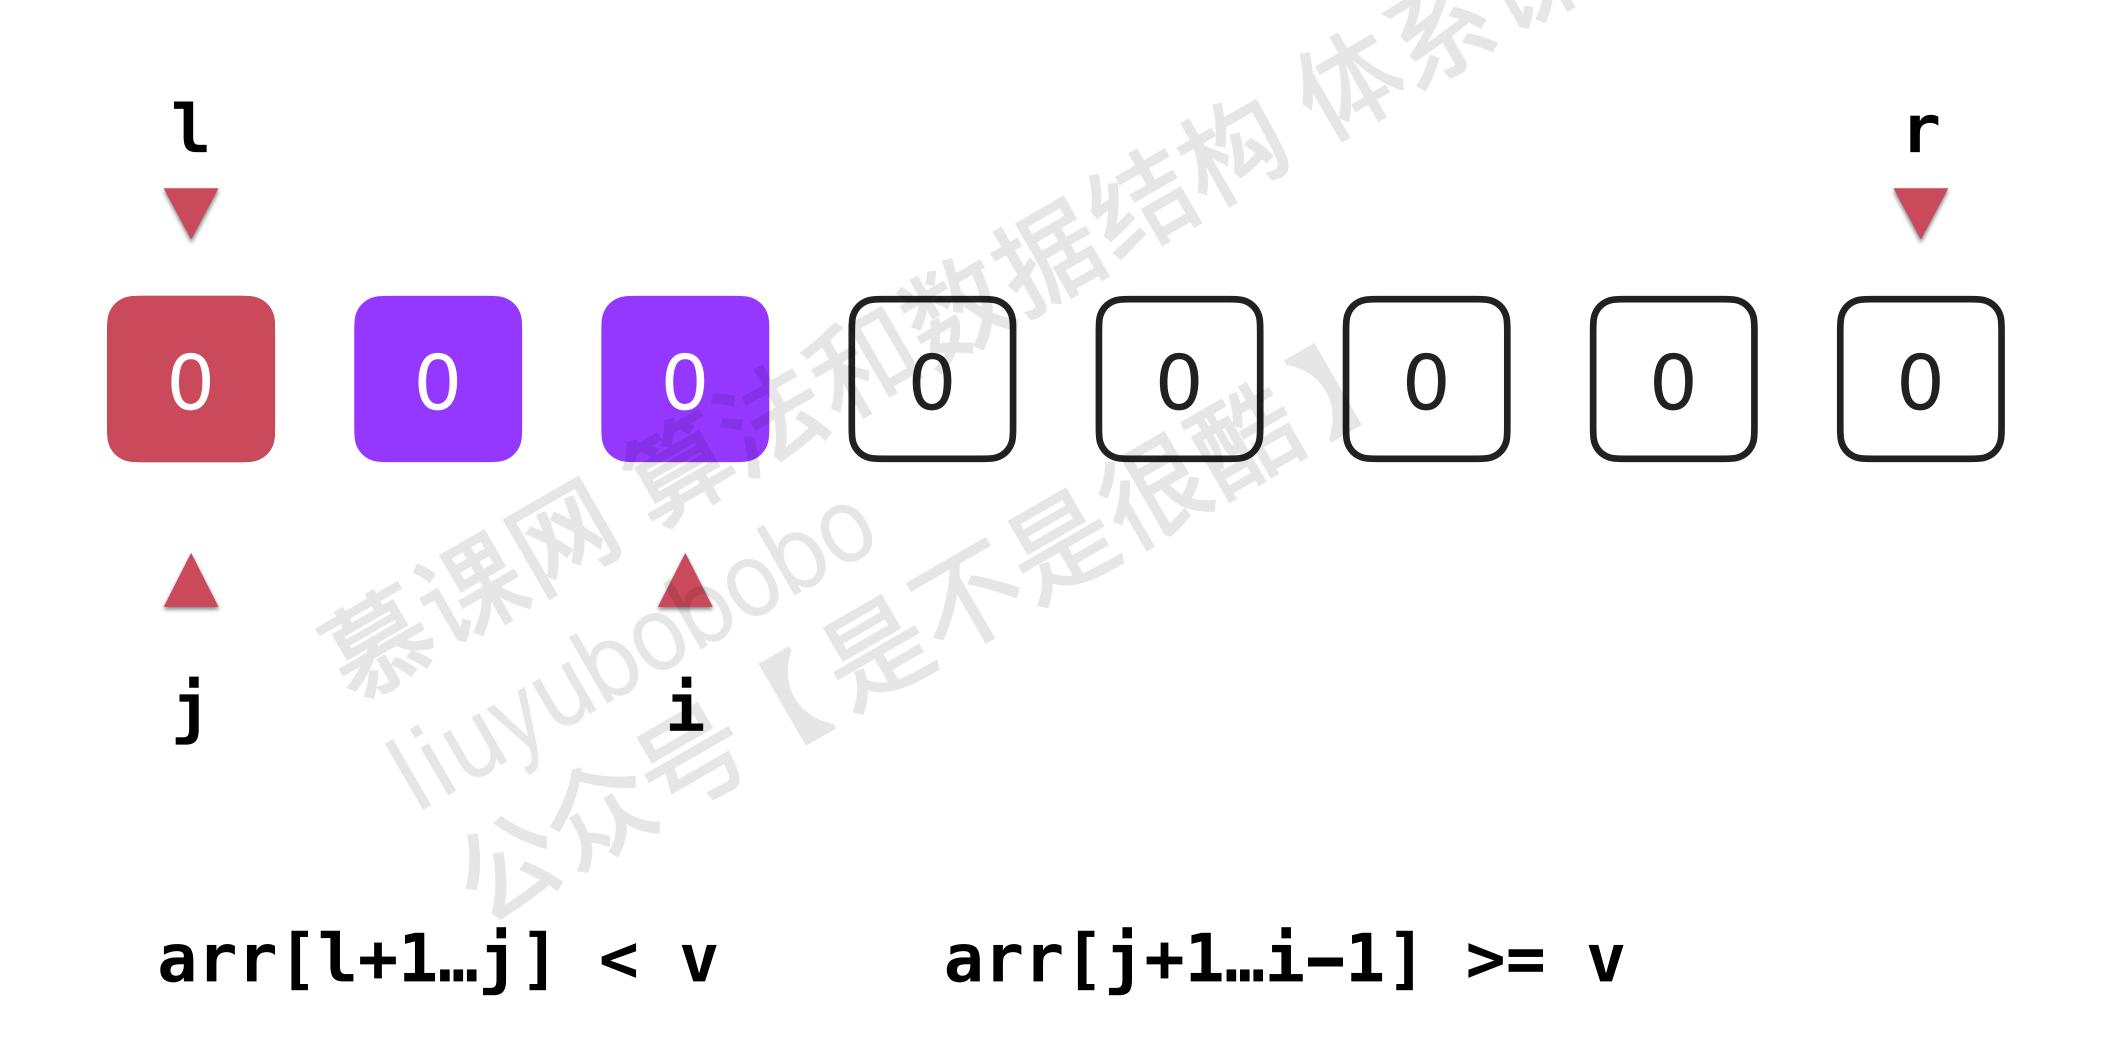

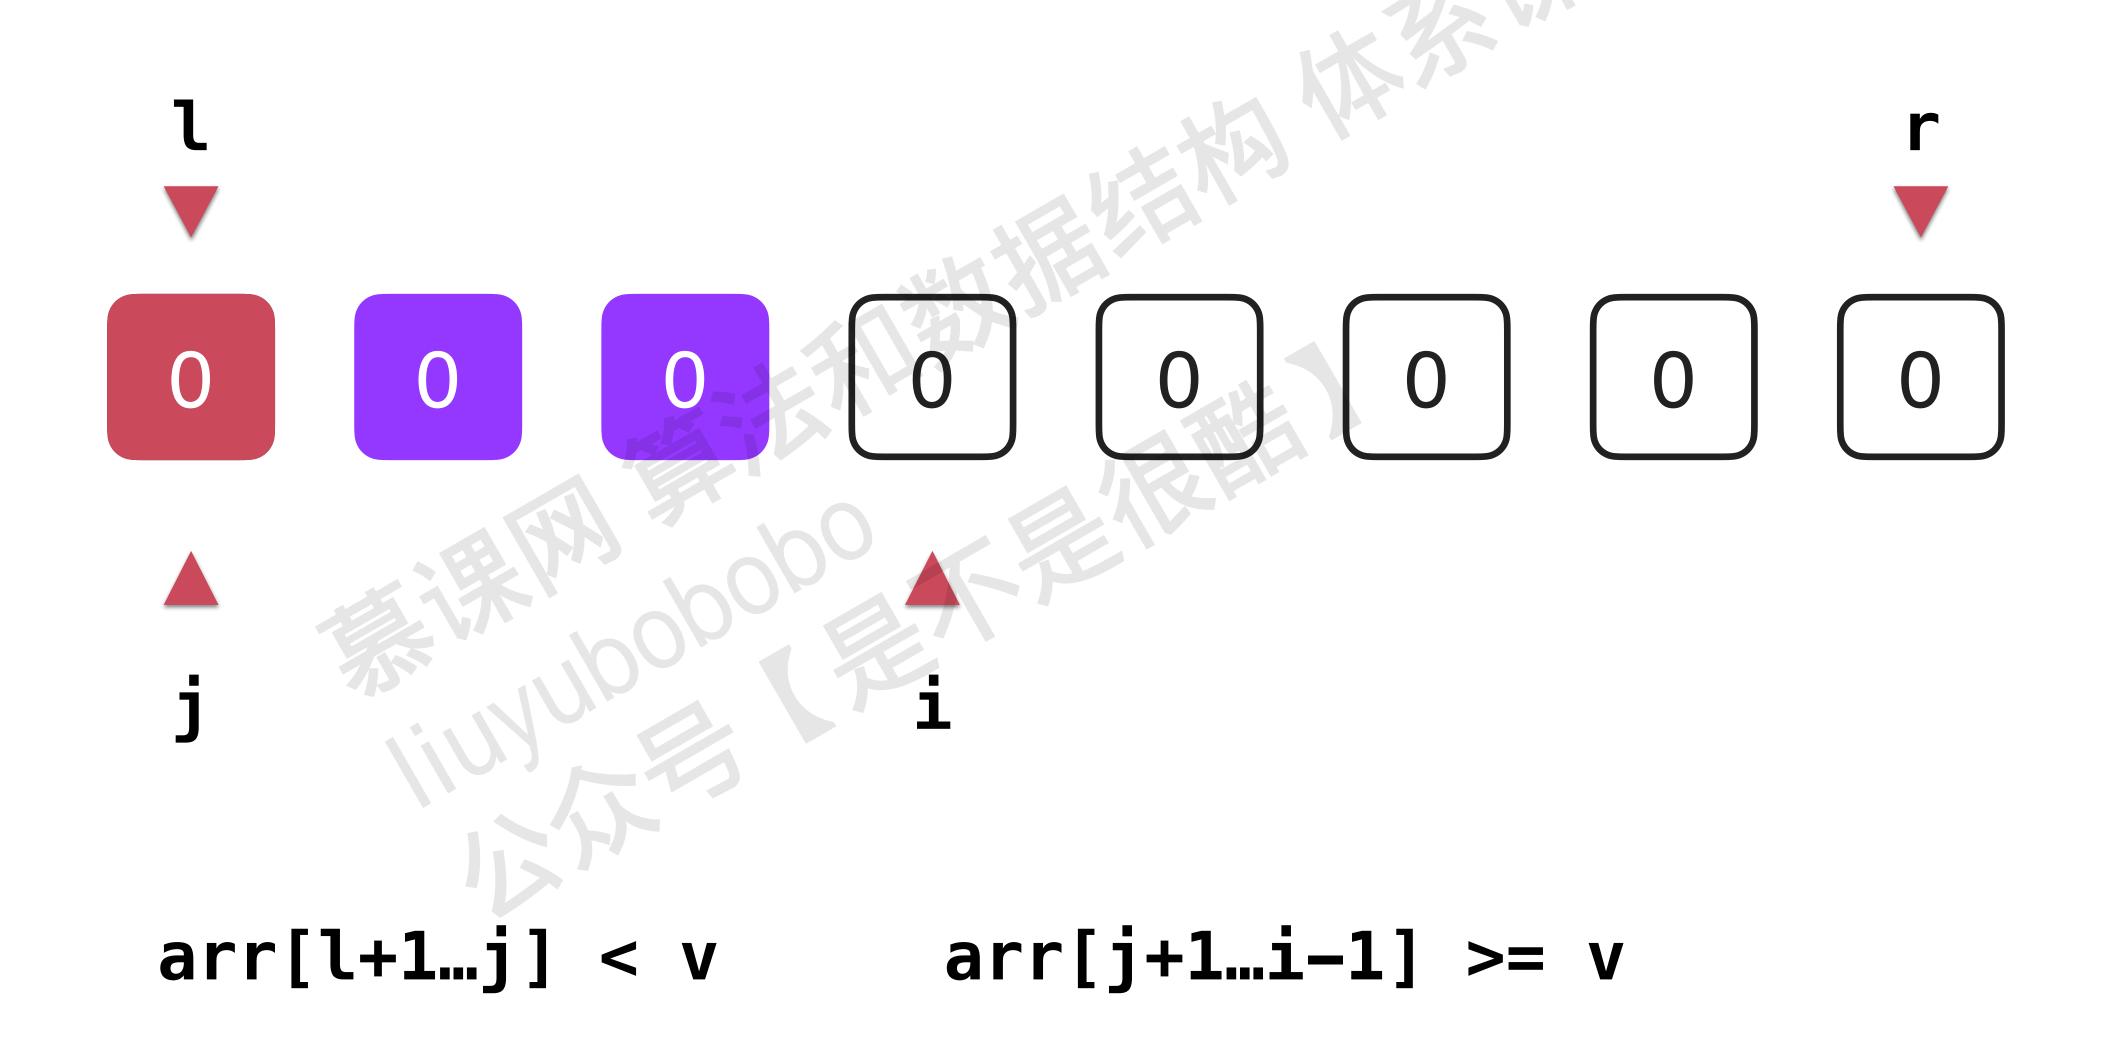

实践:展示快速排序法的问题

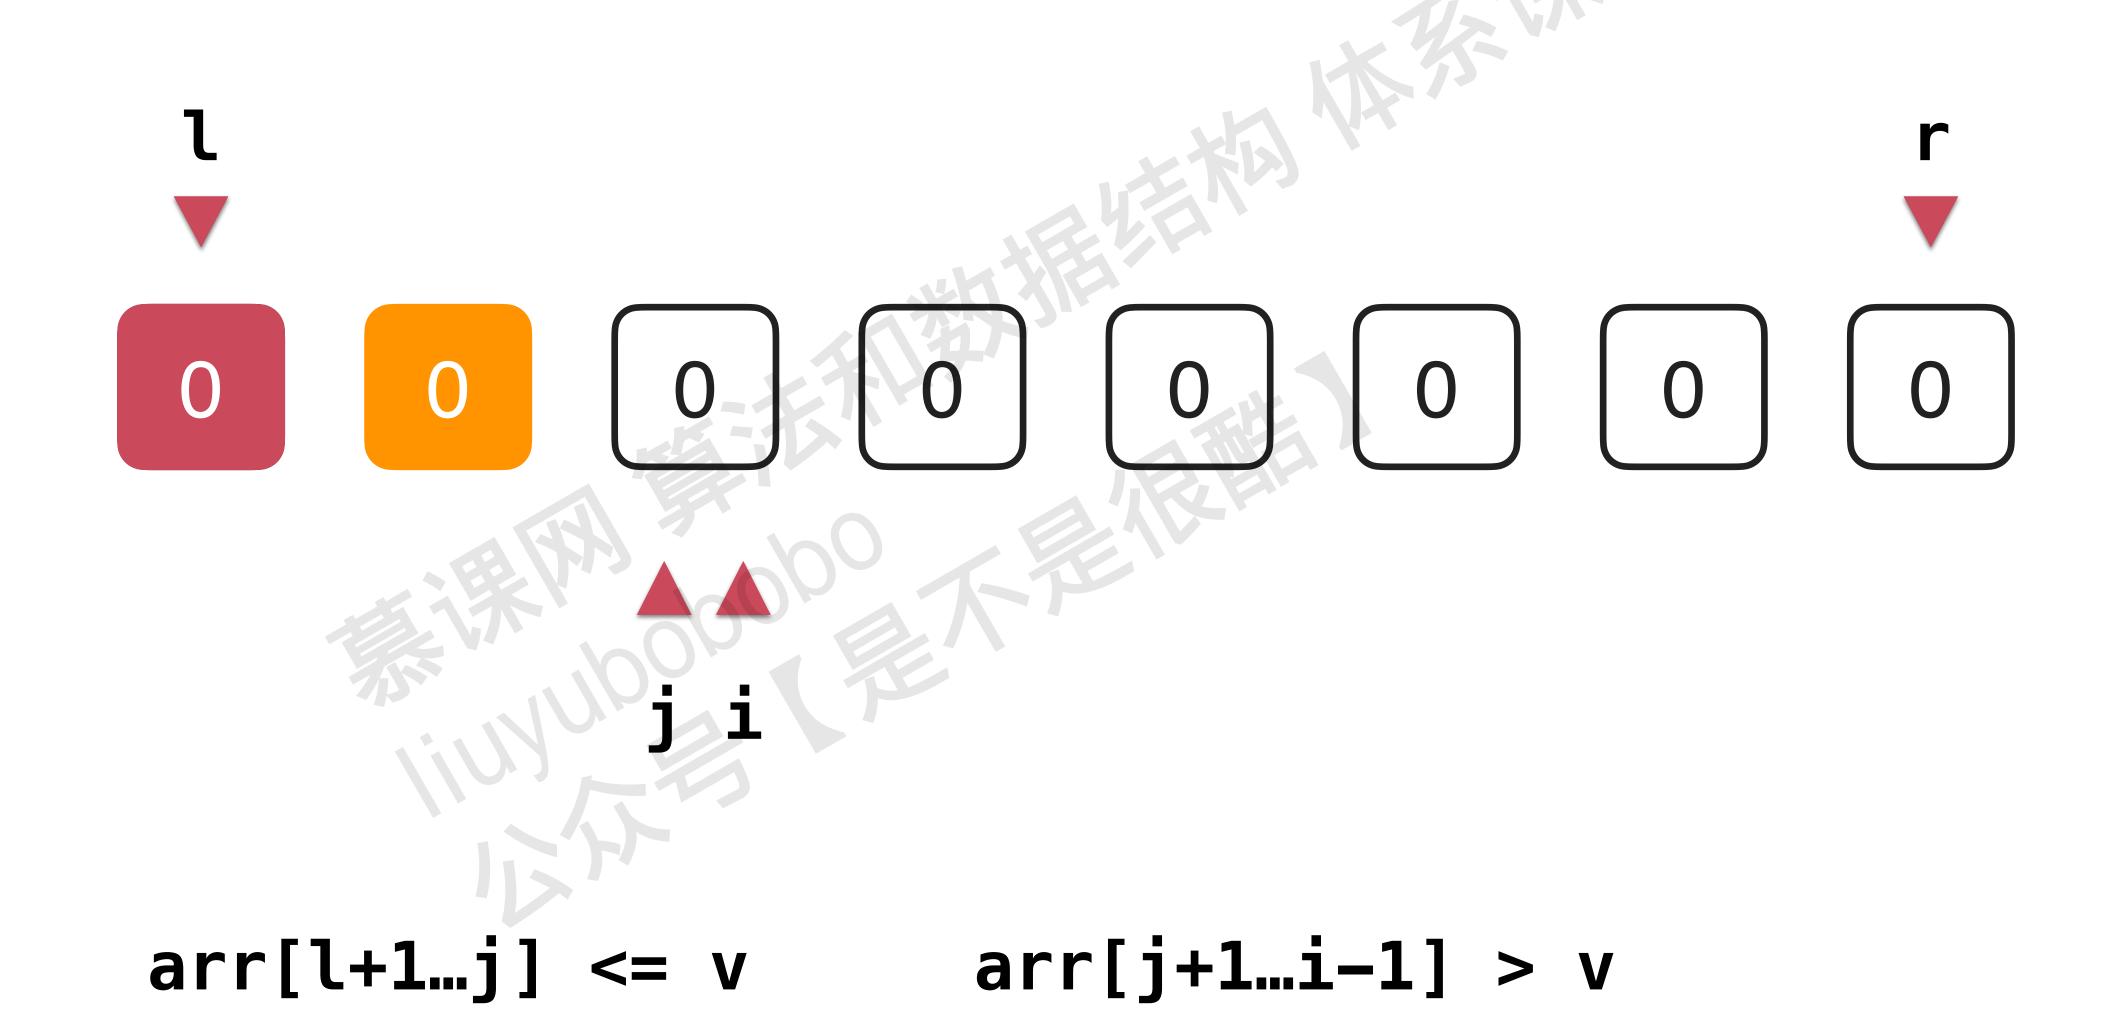

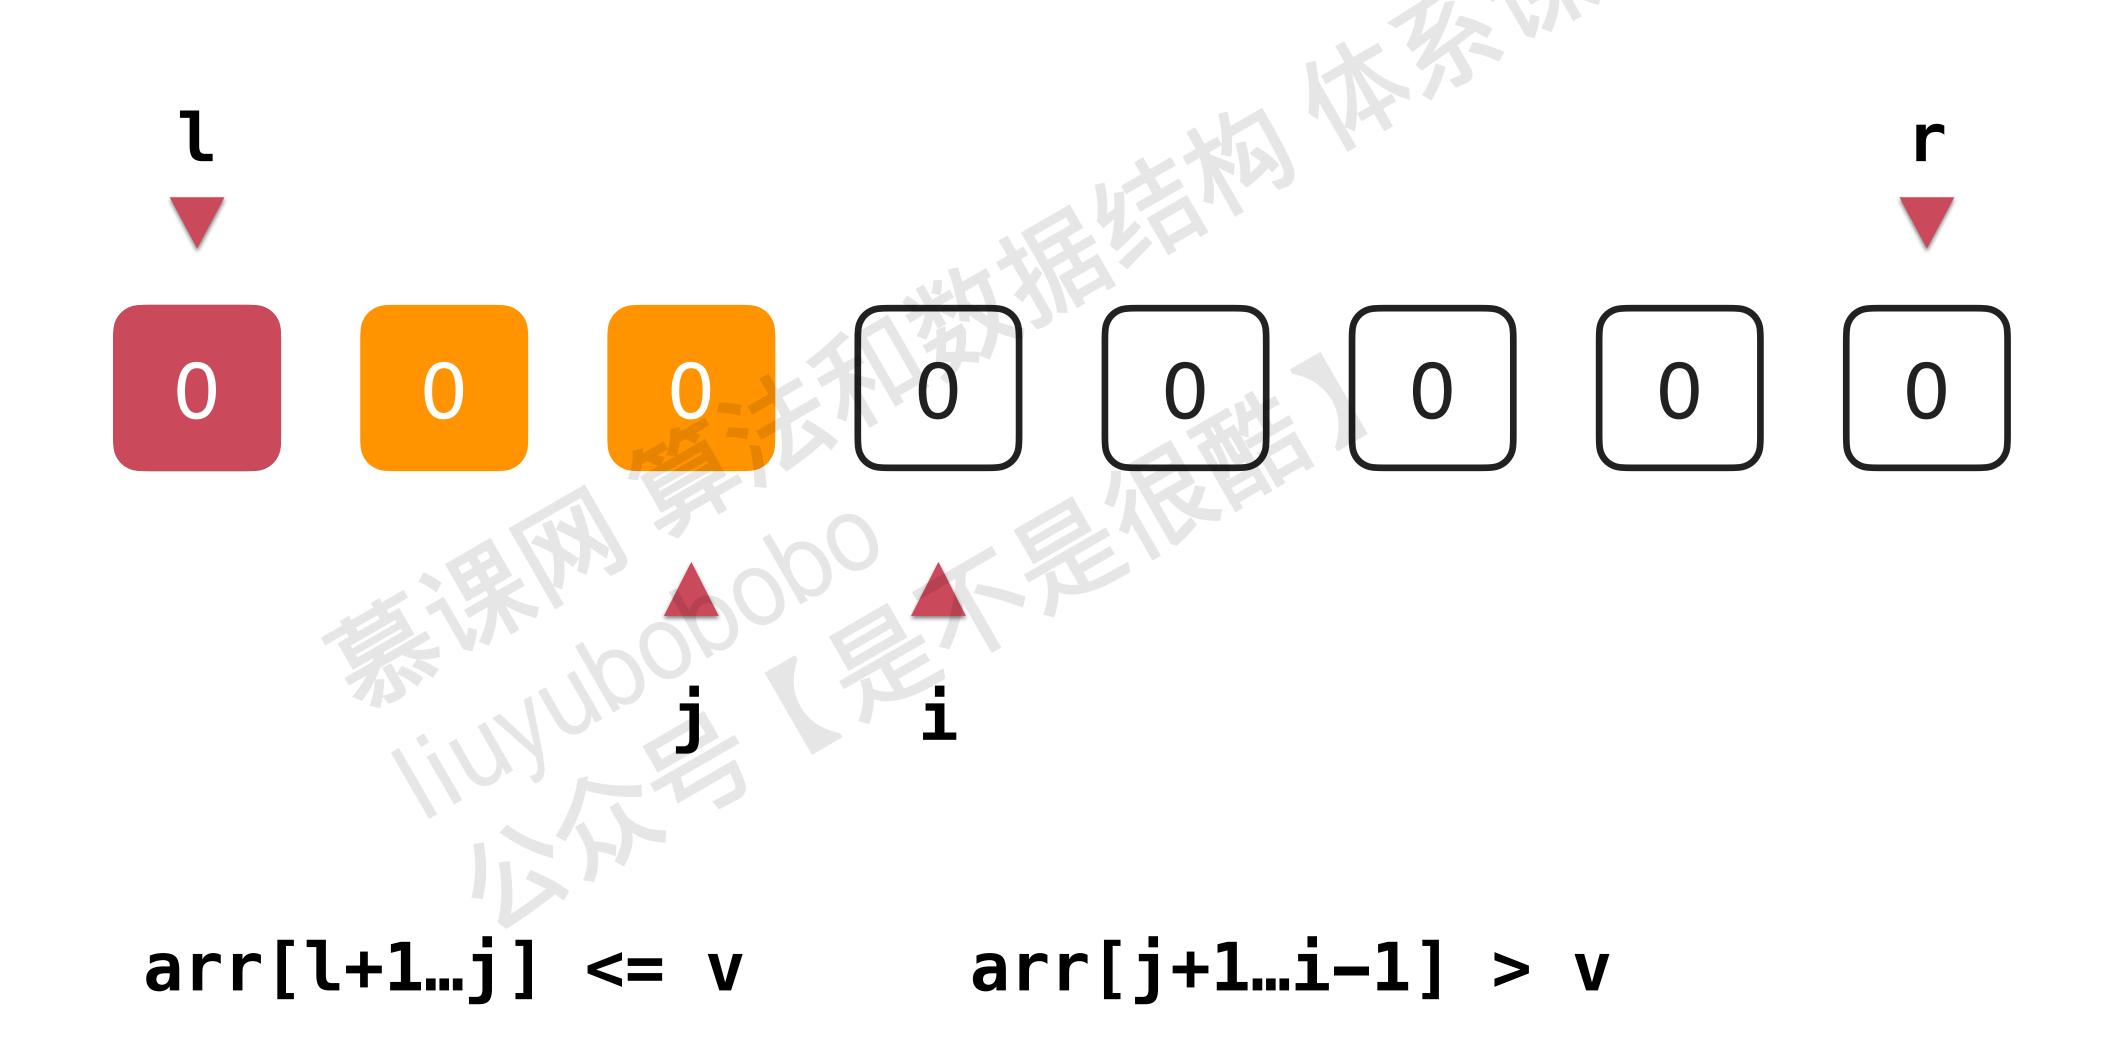

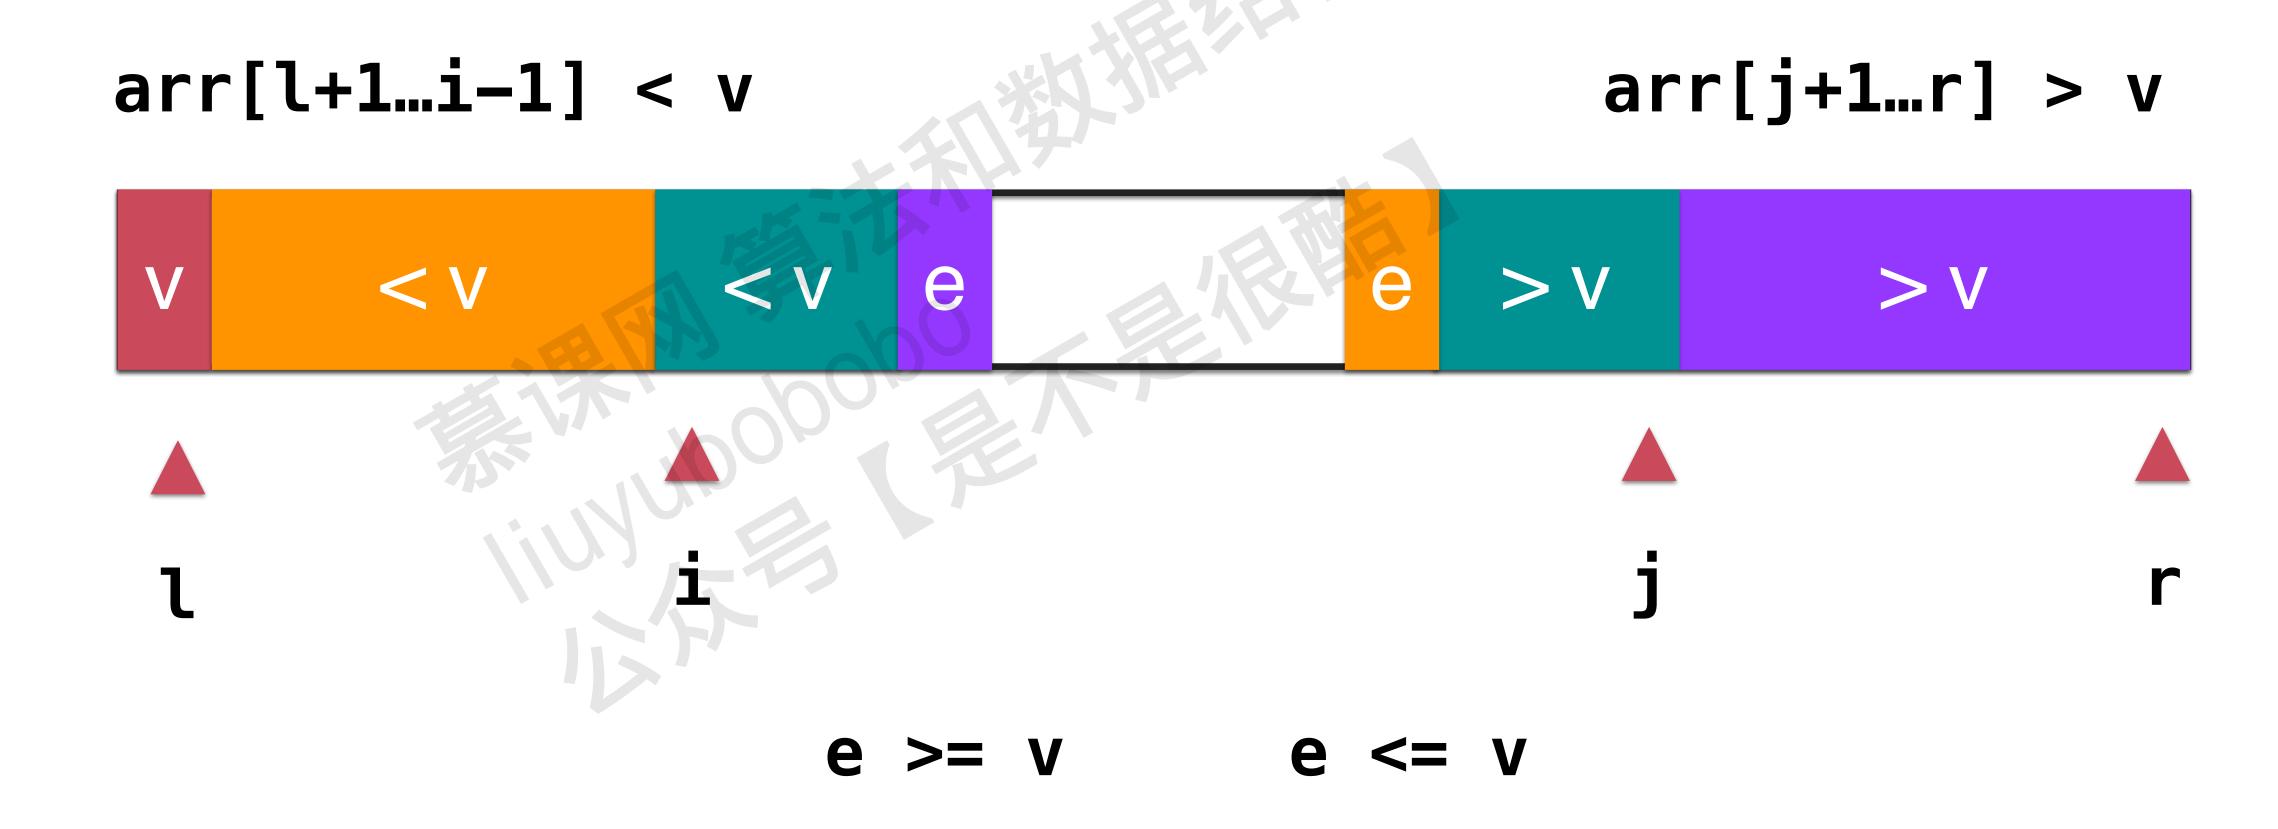

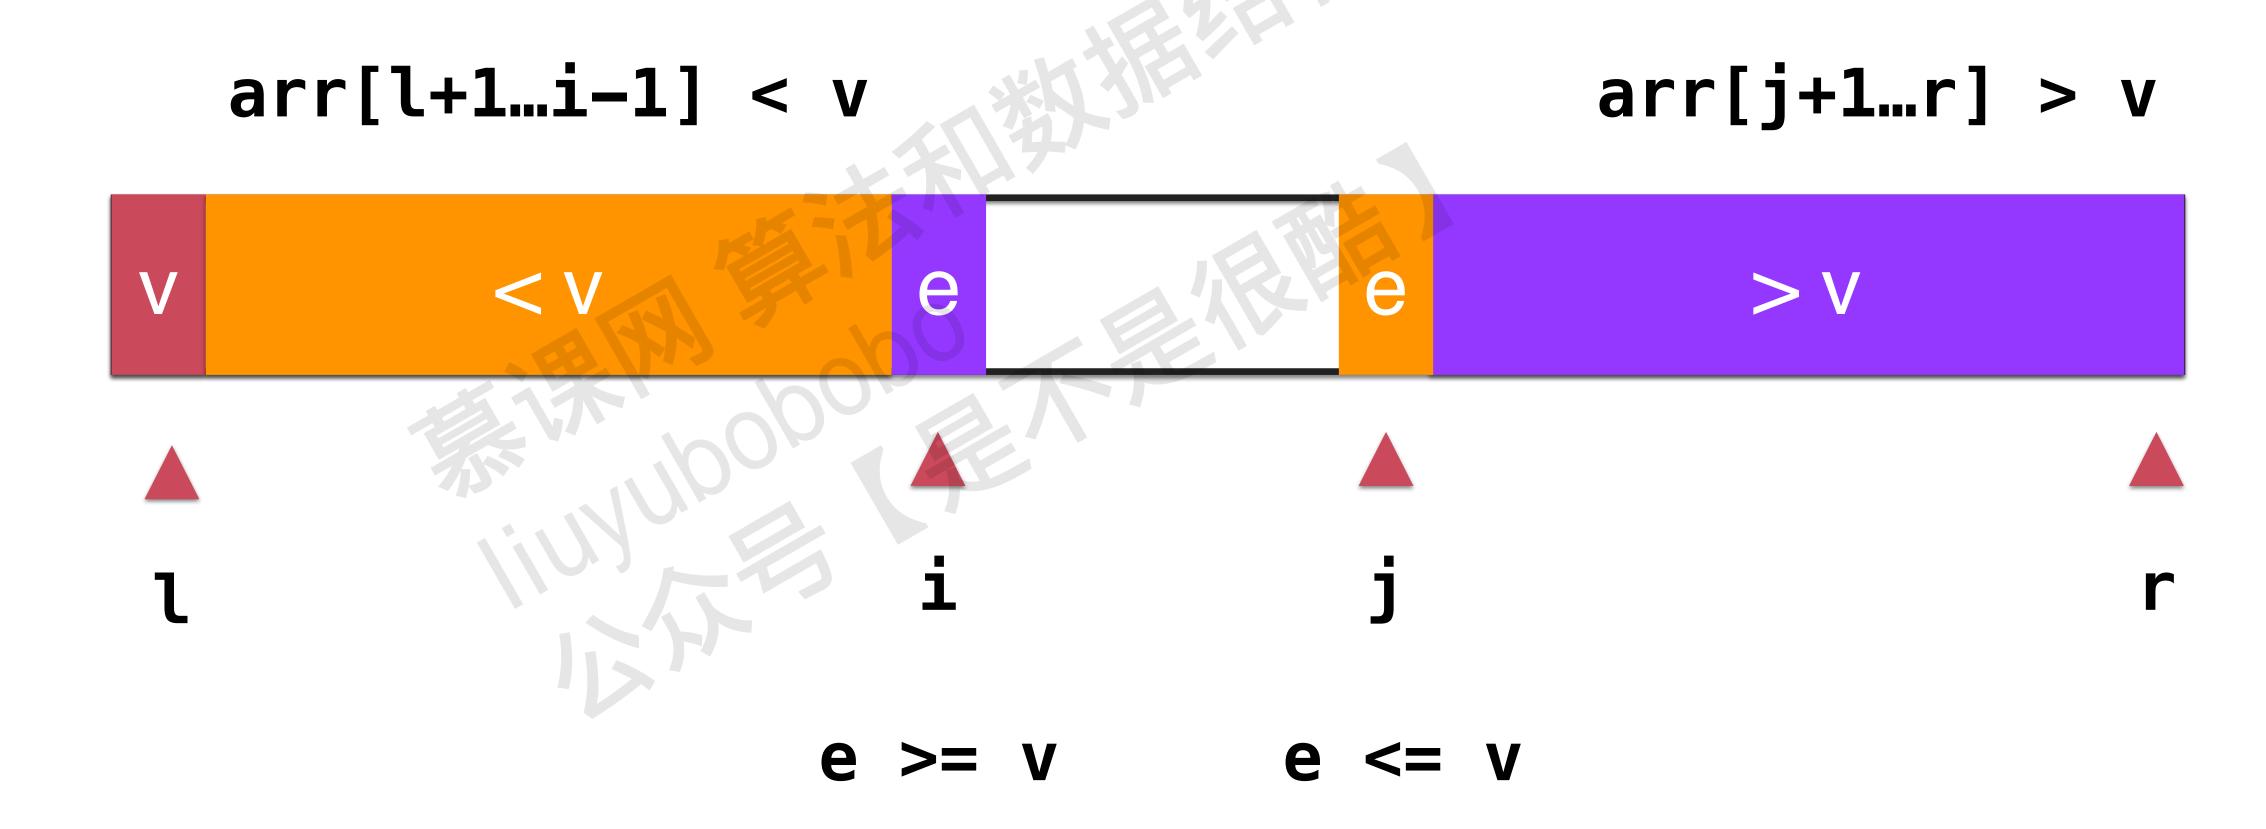

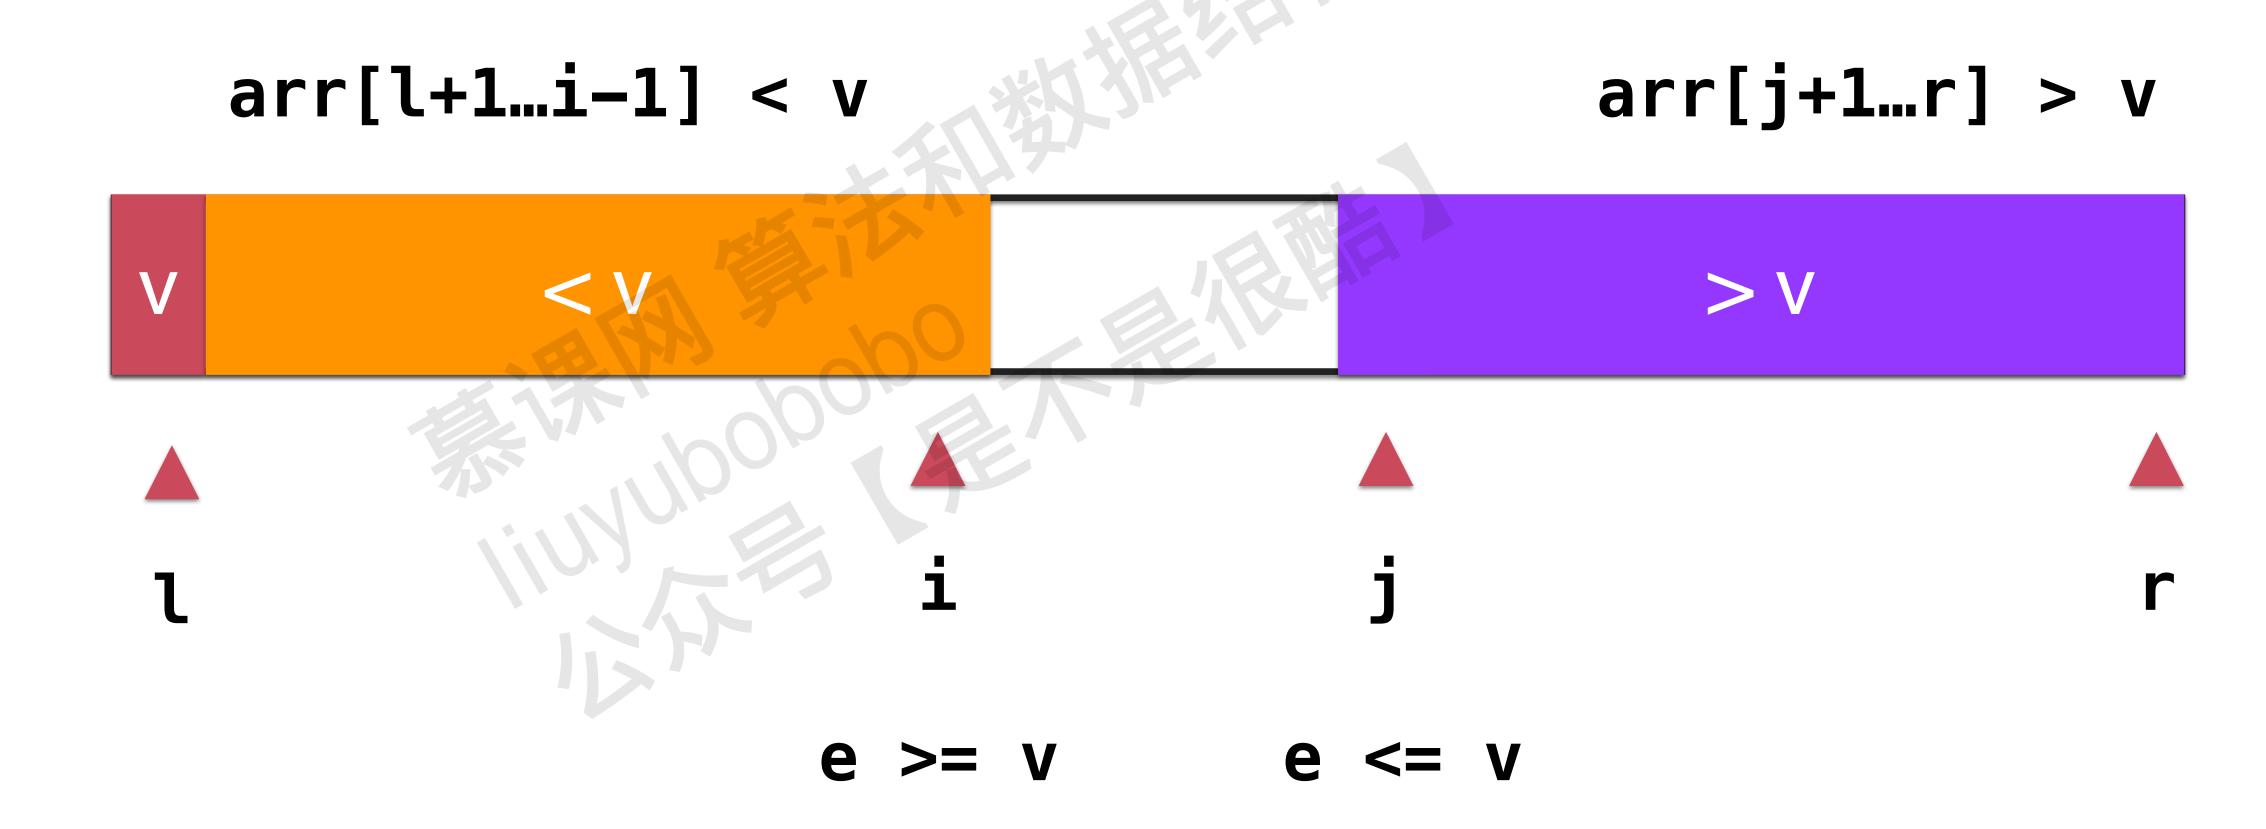

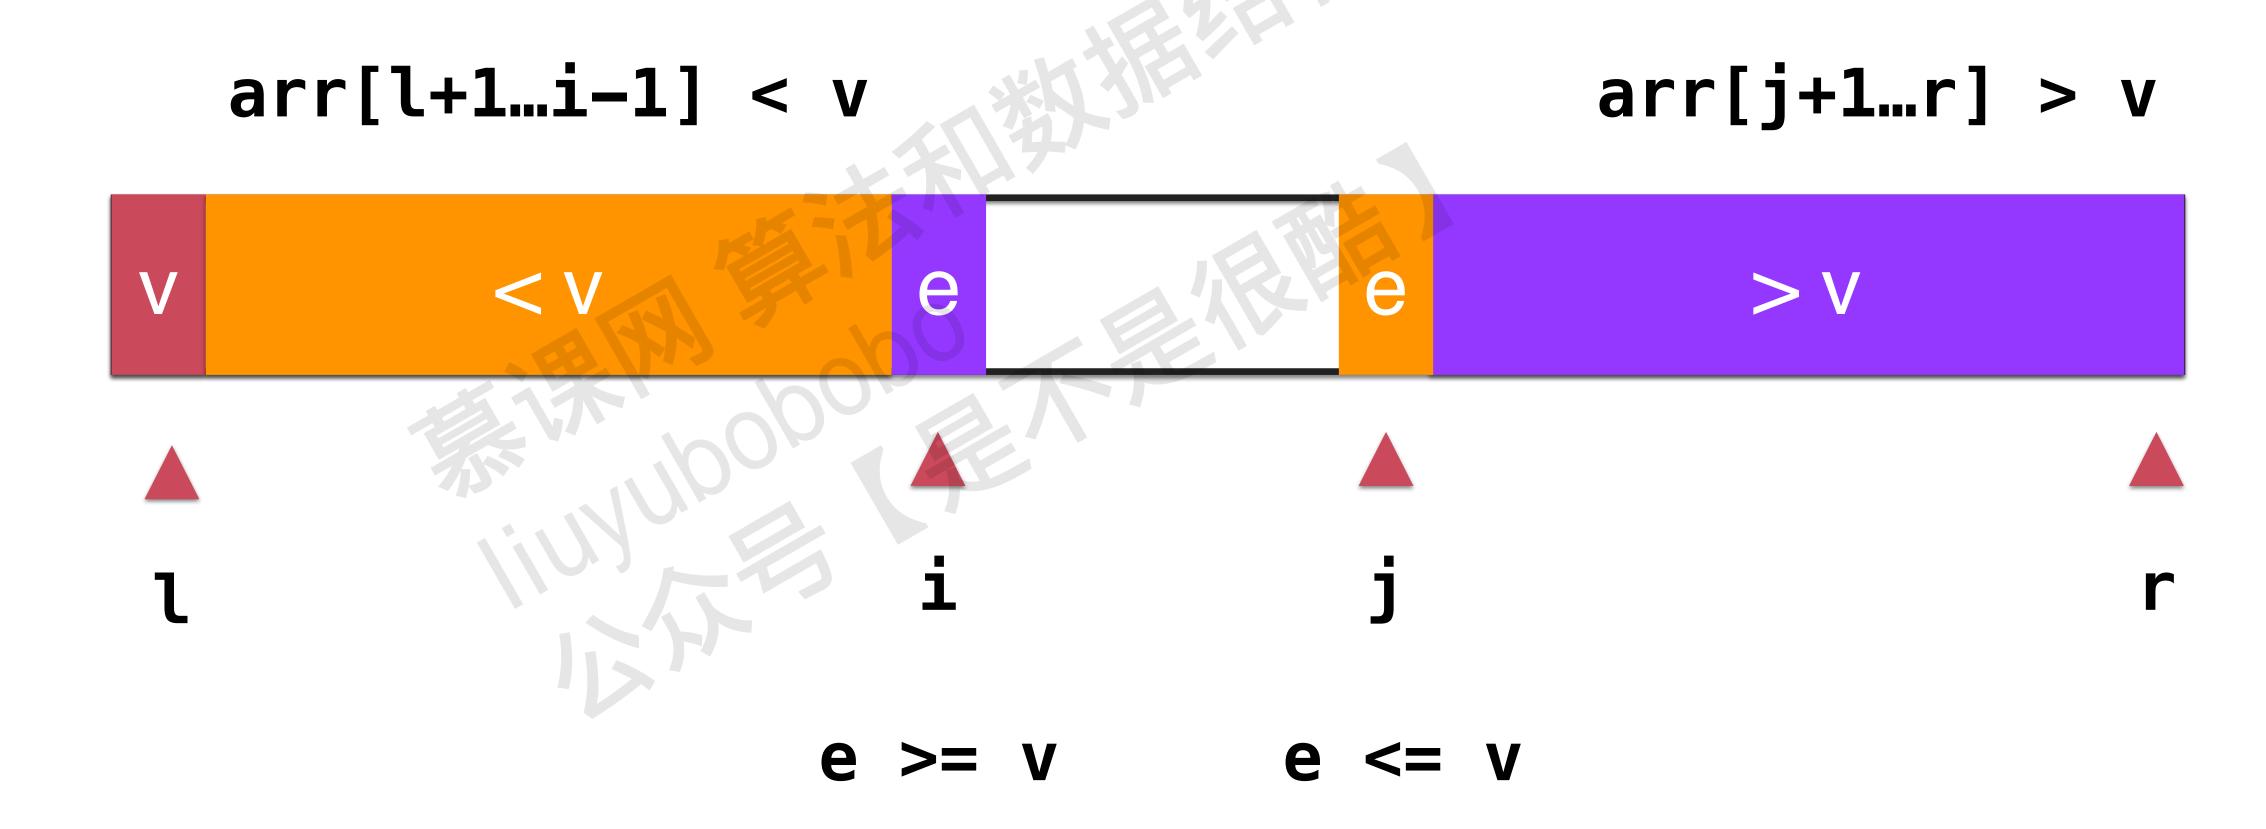

解决方案

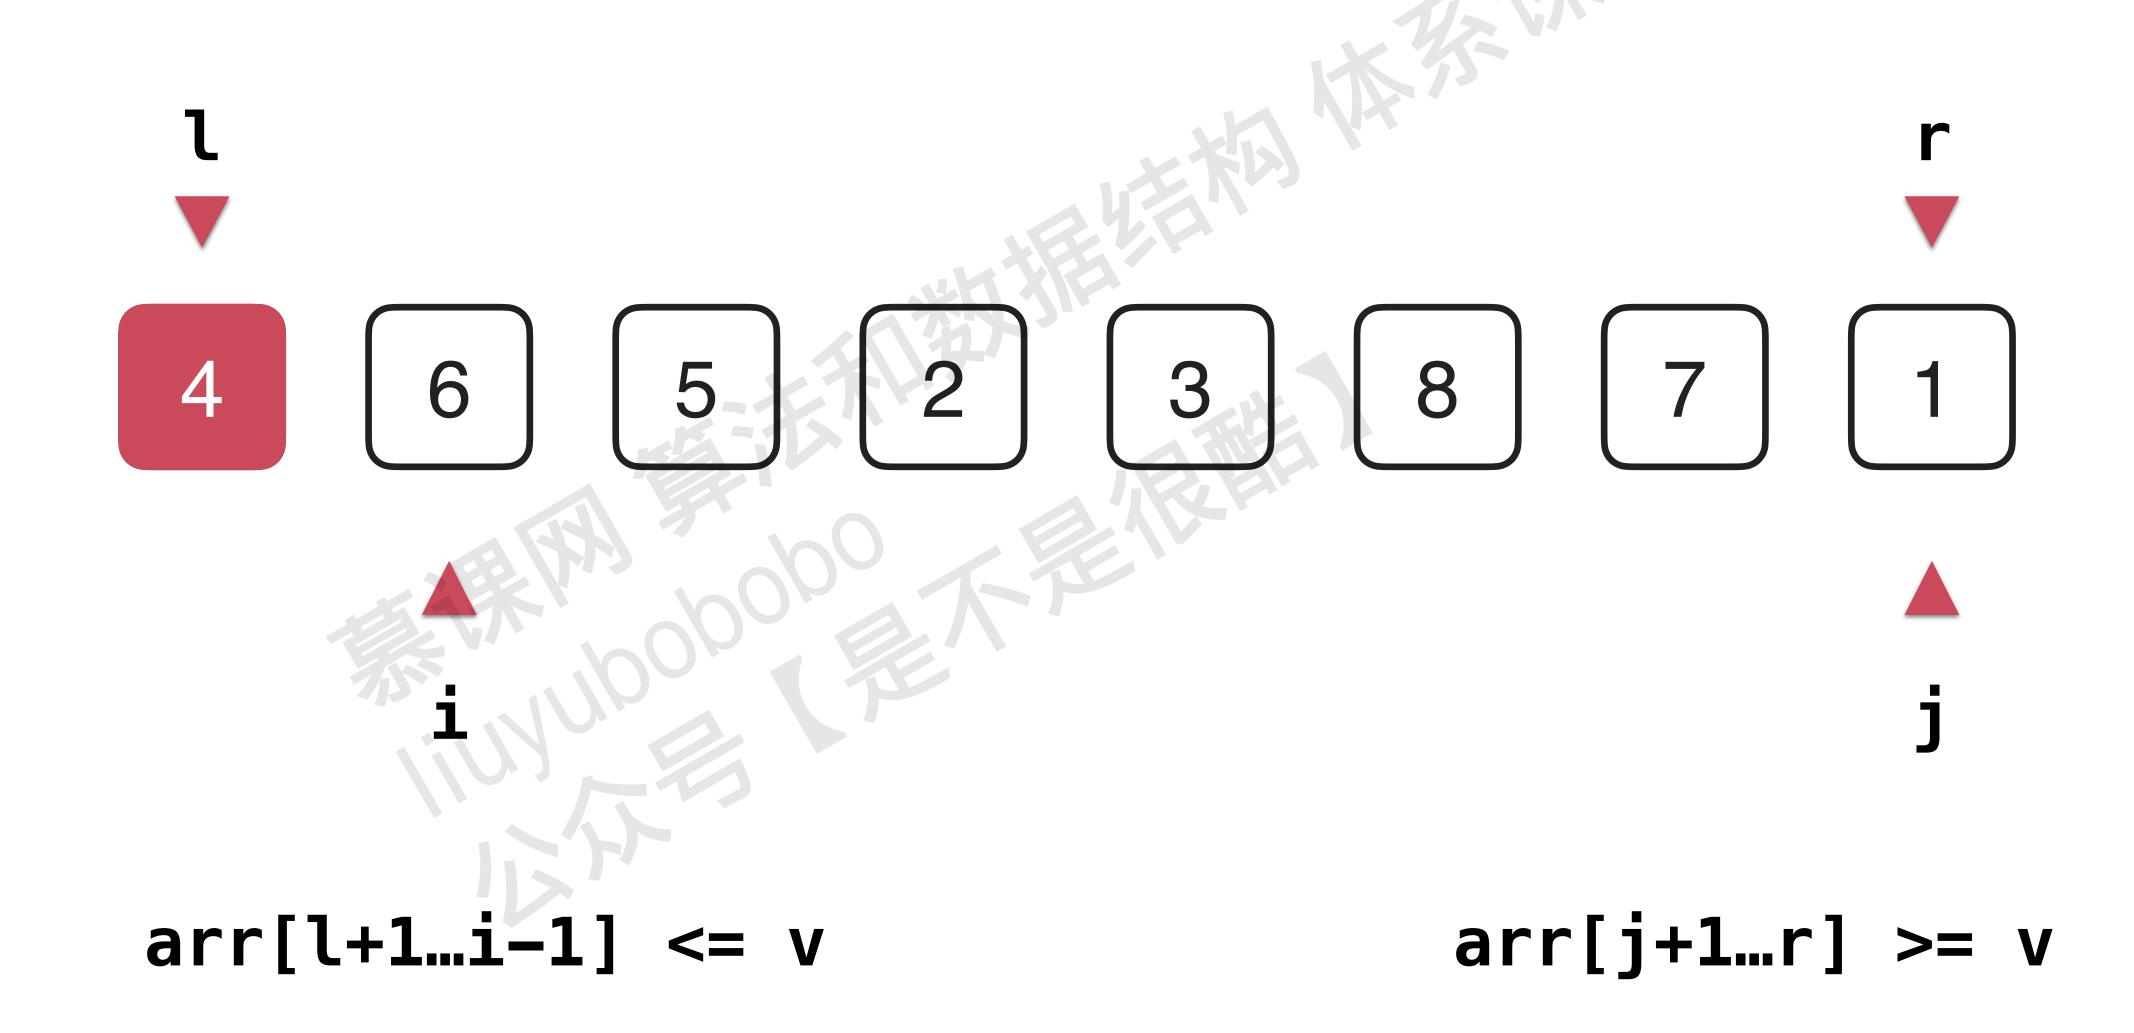

双路快速排序法

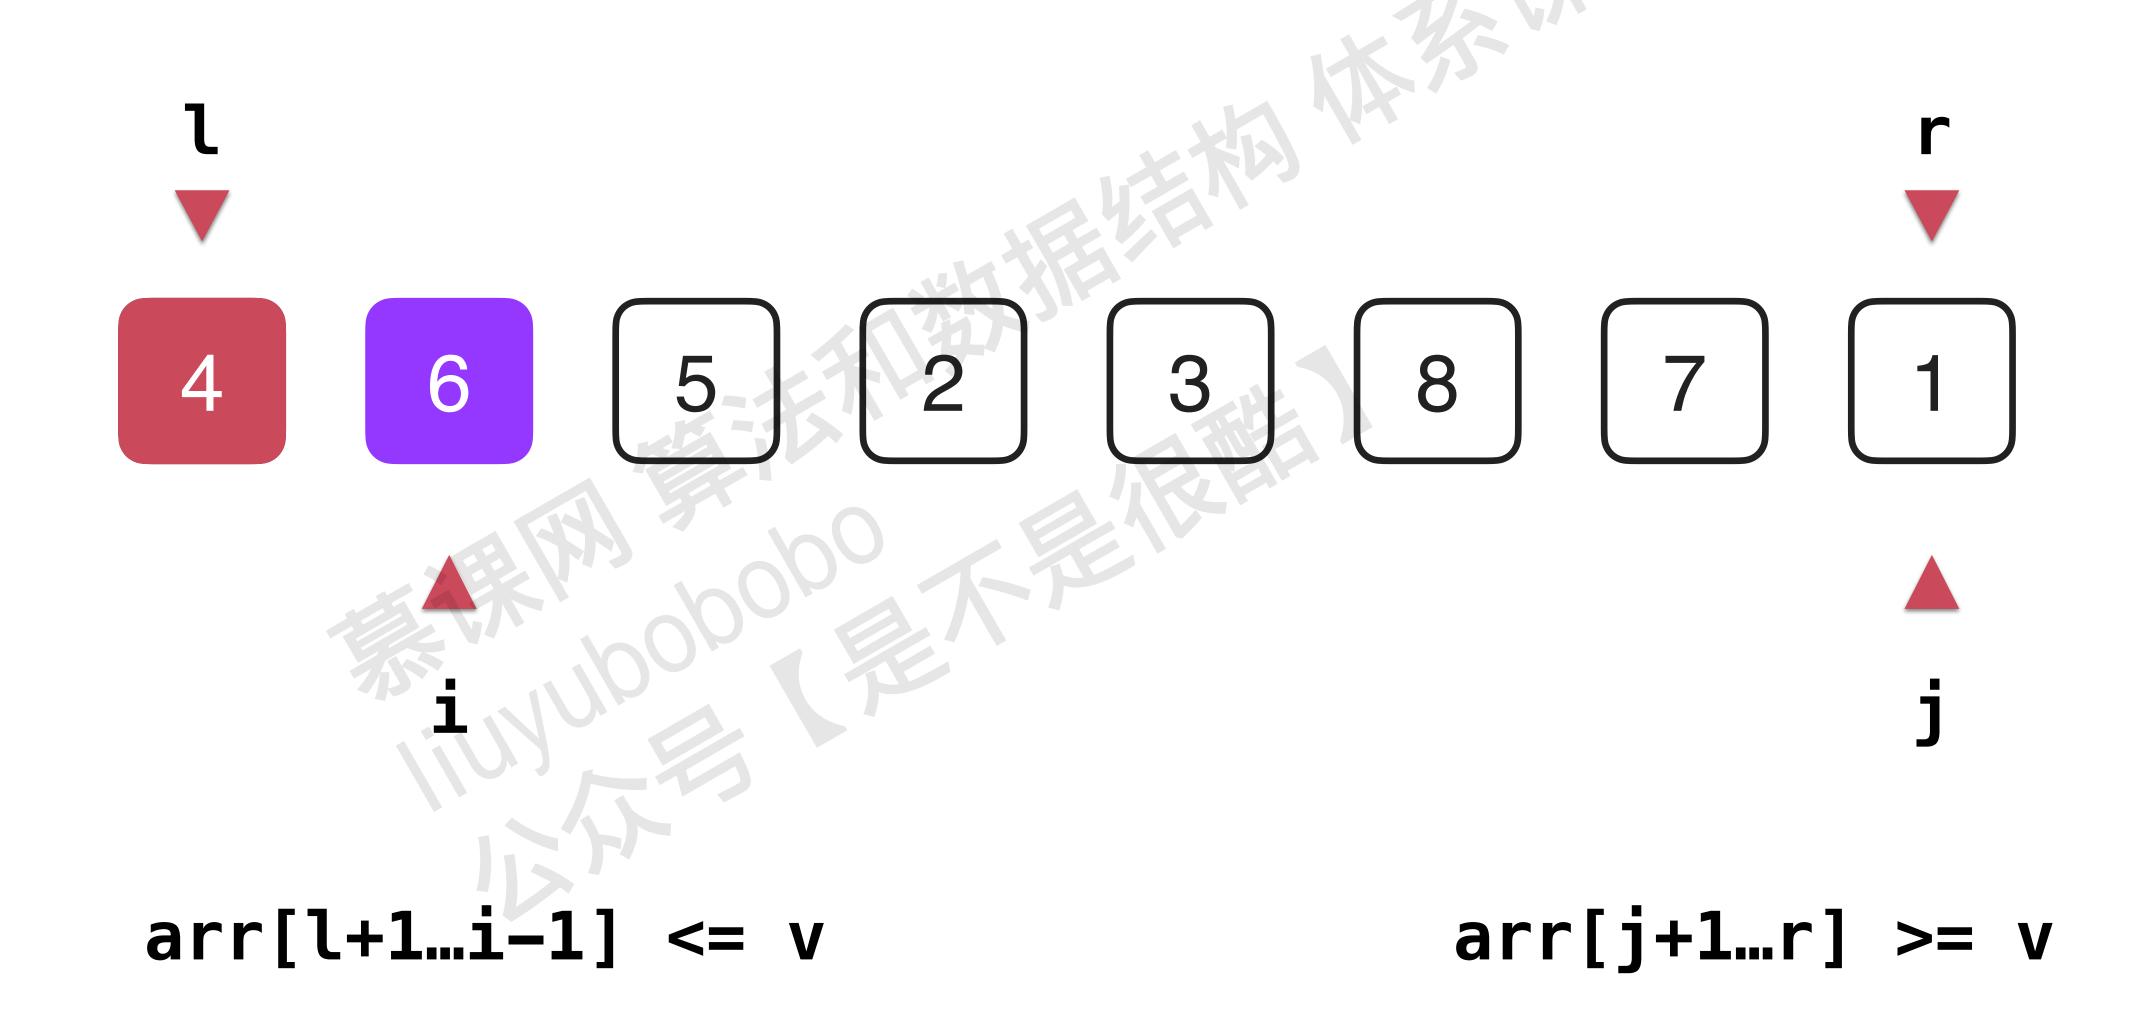

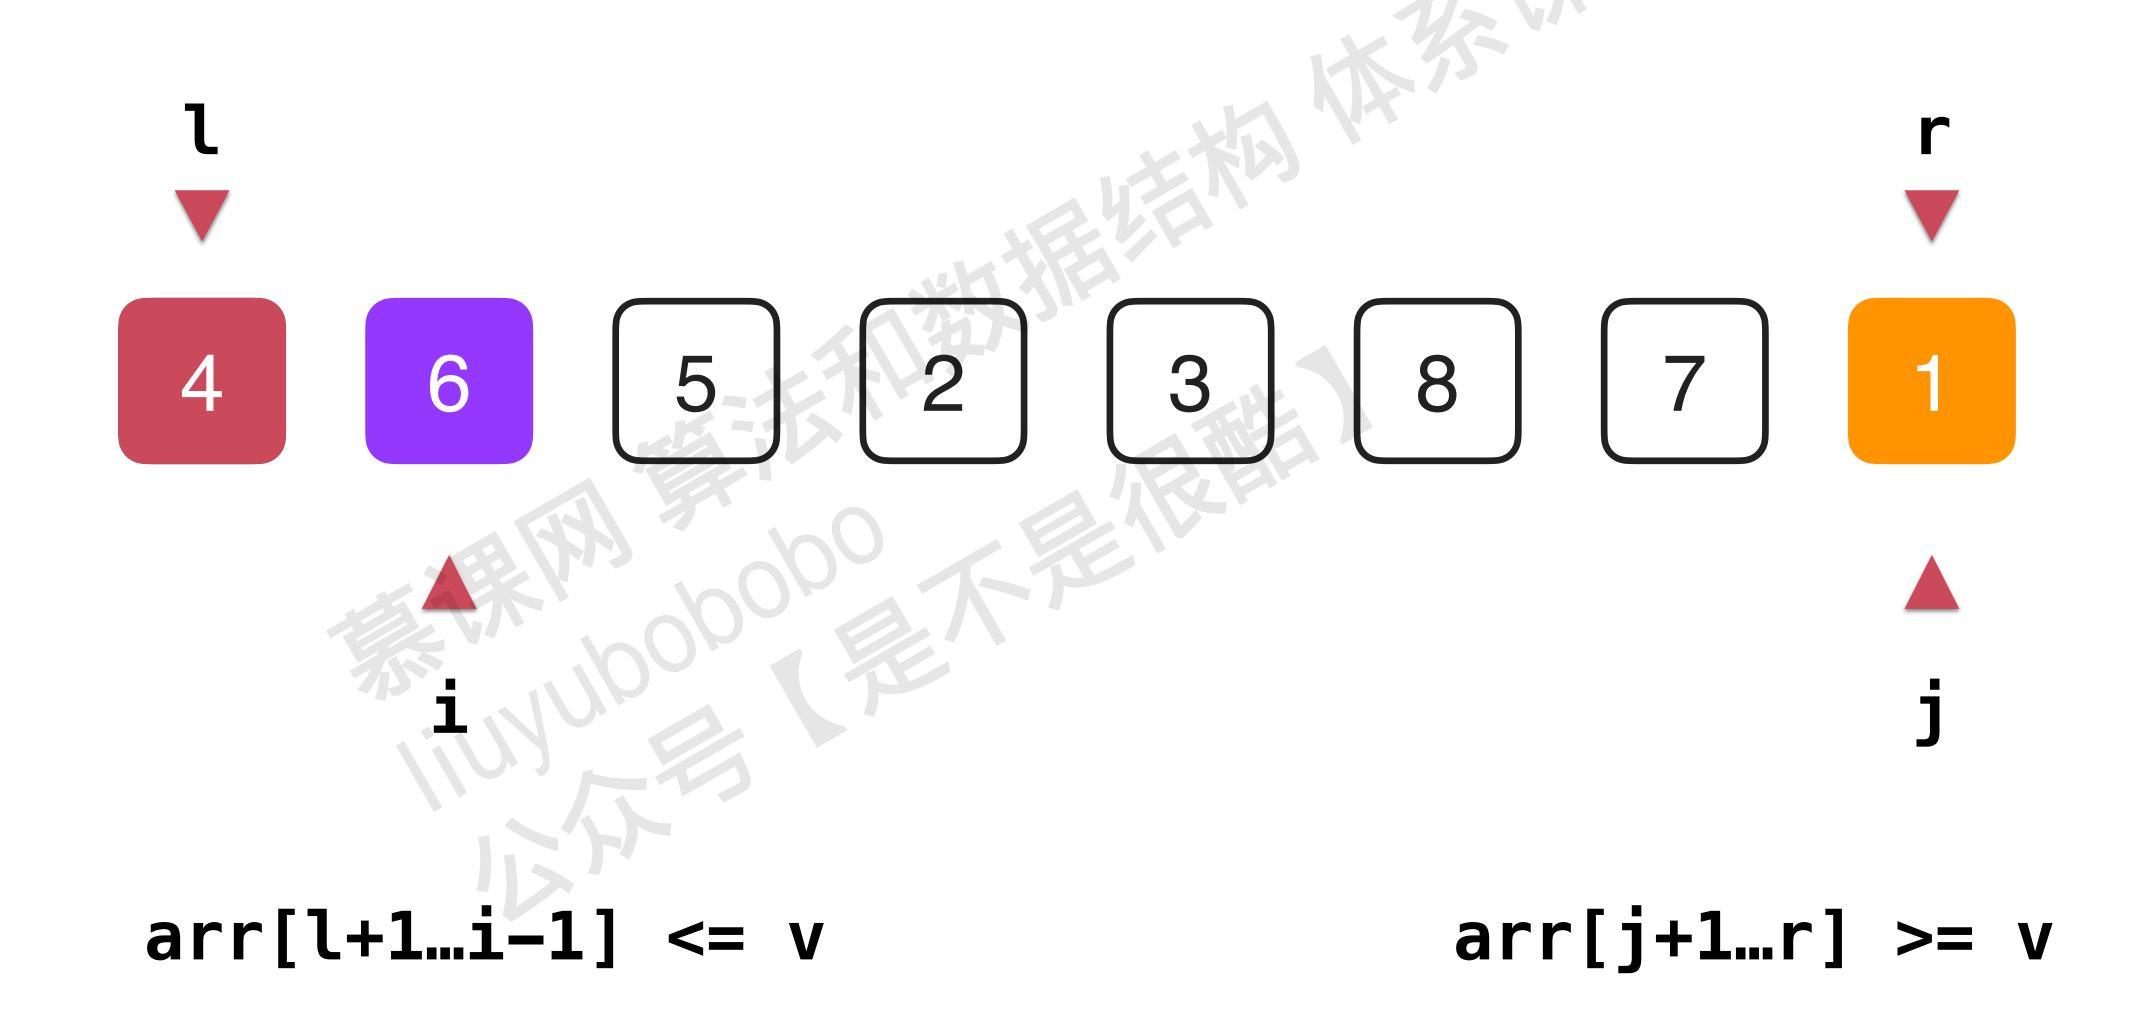

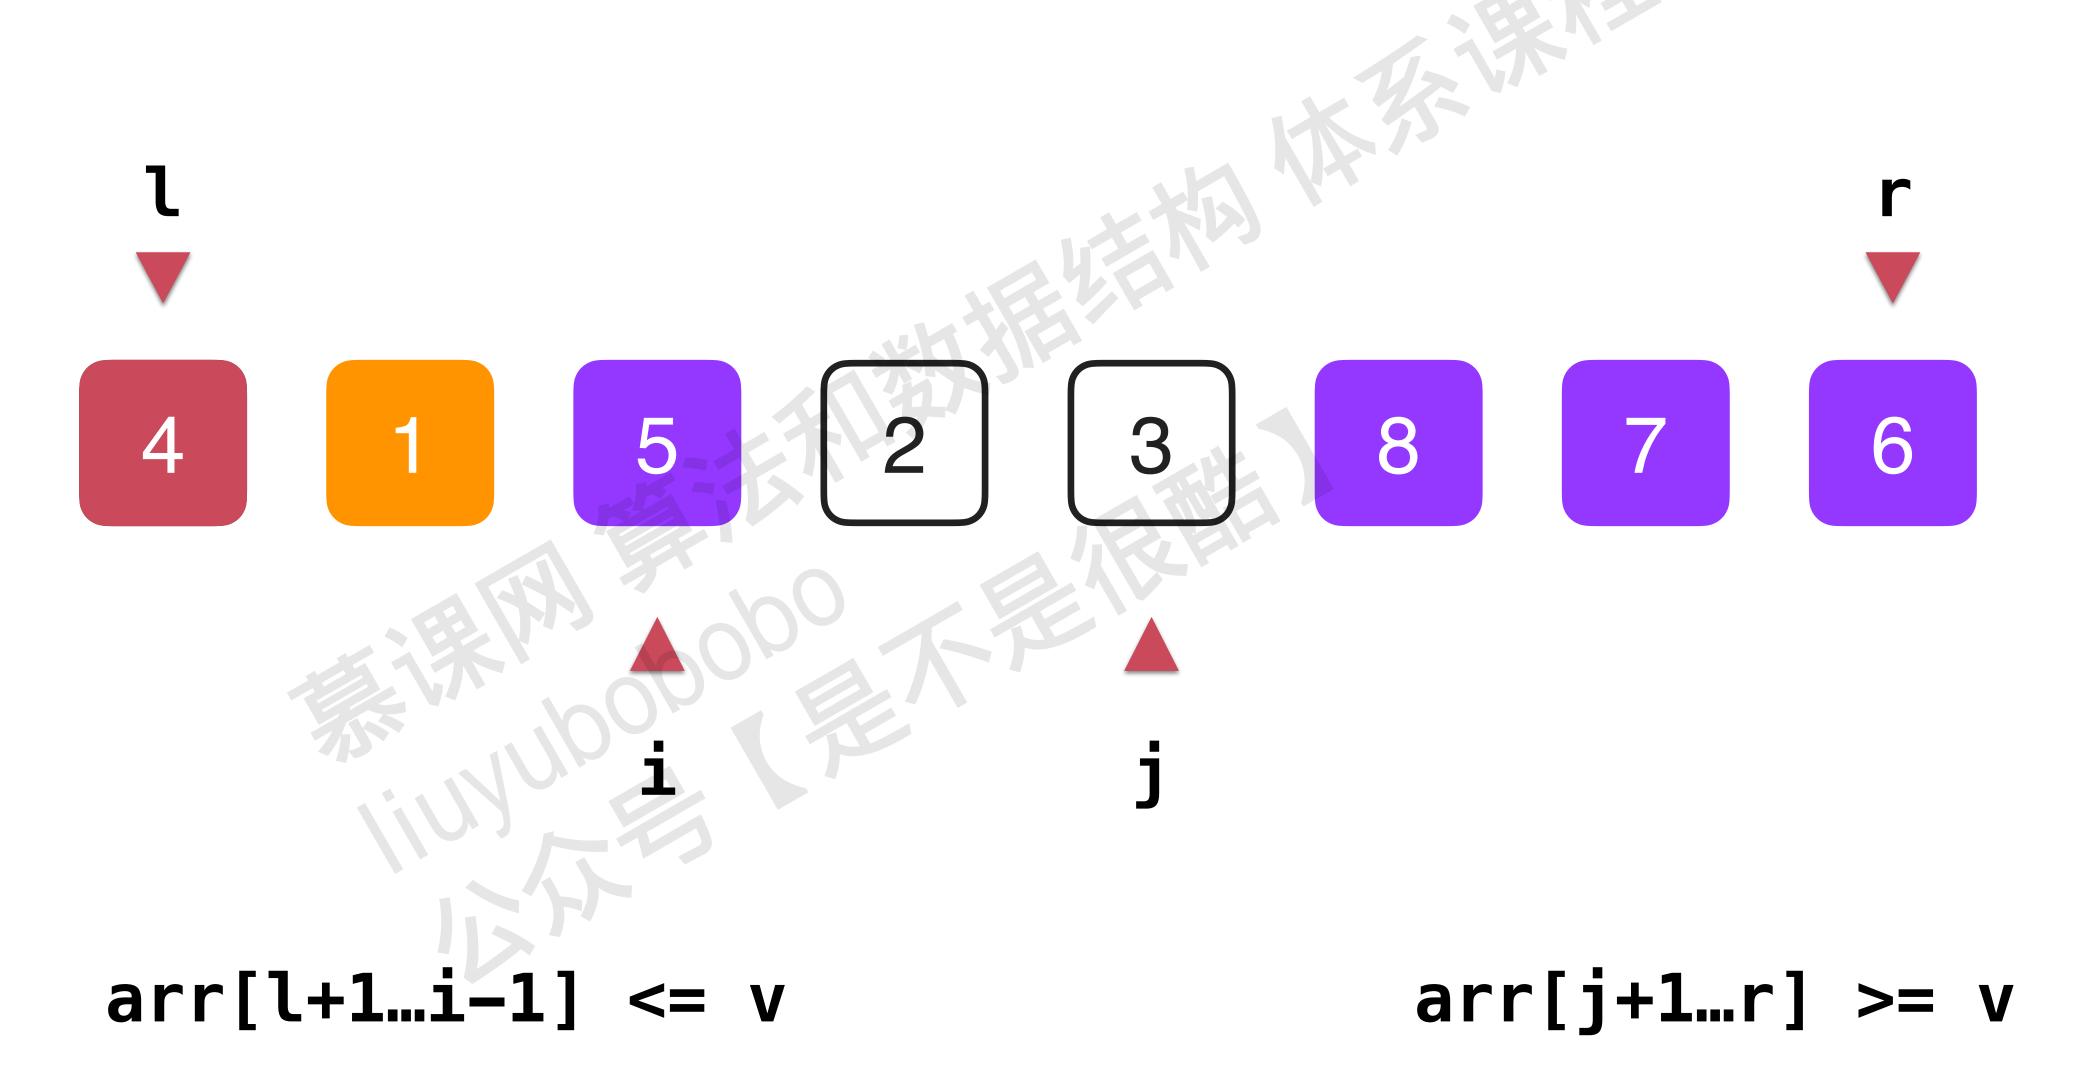

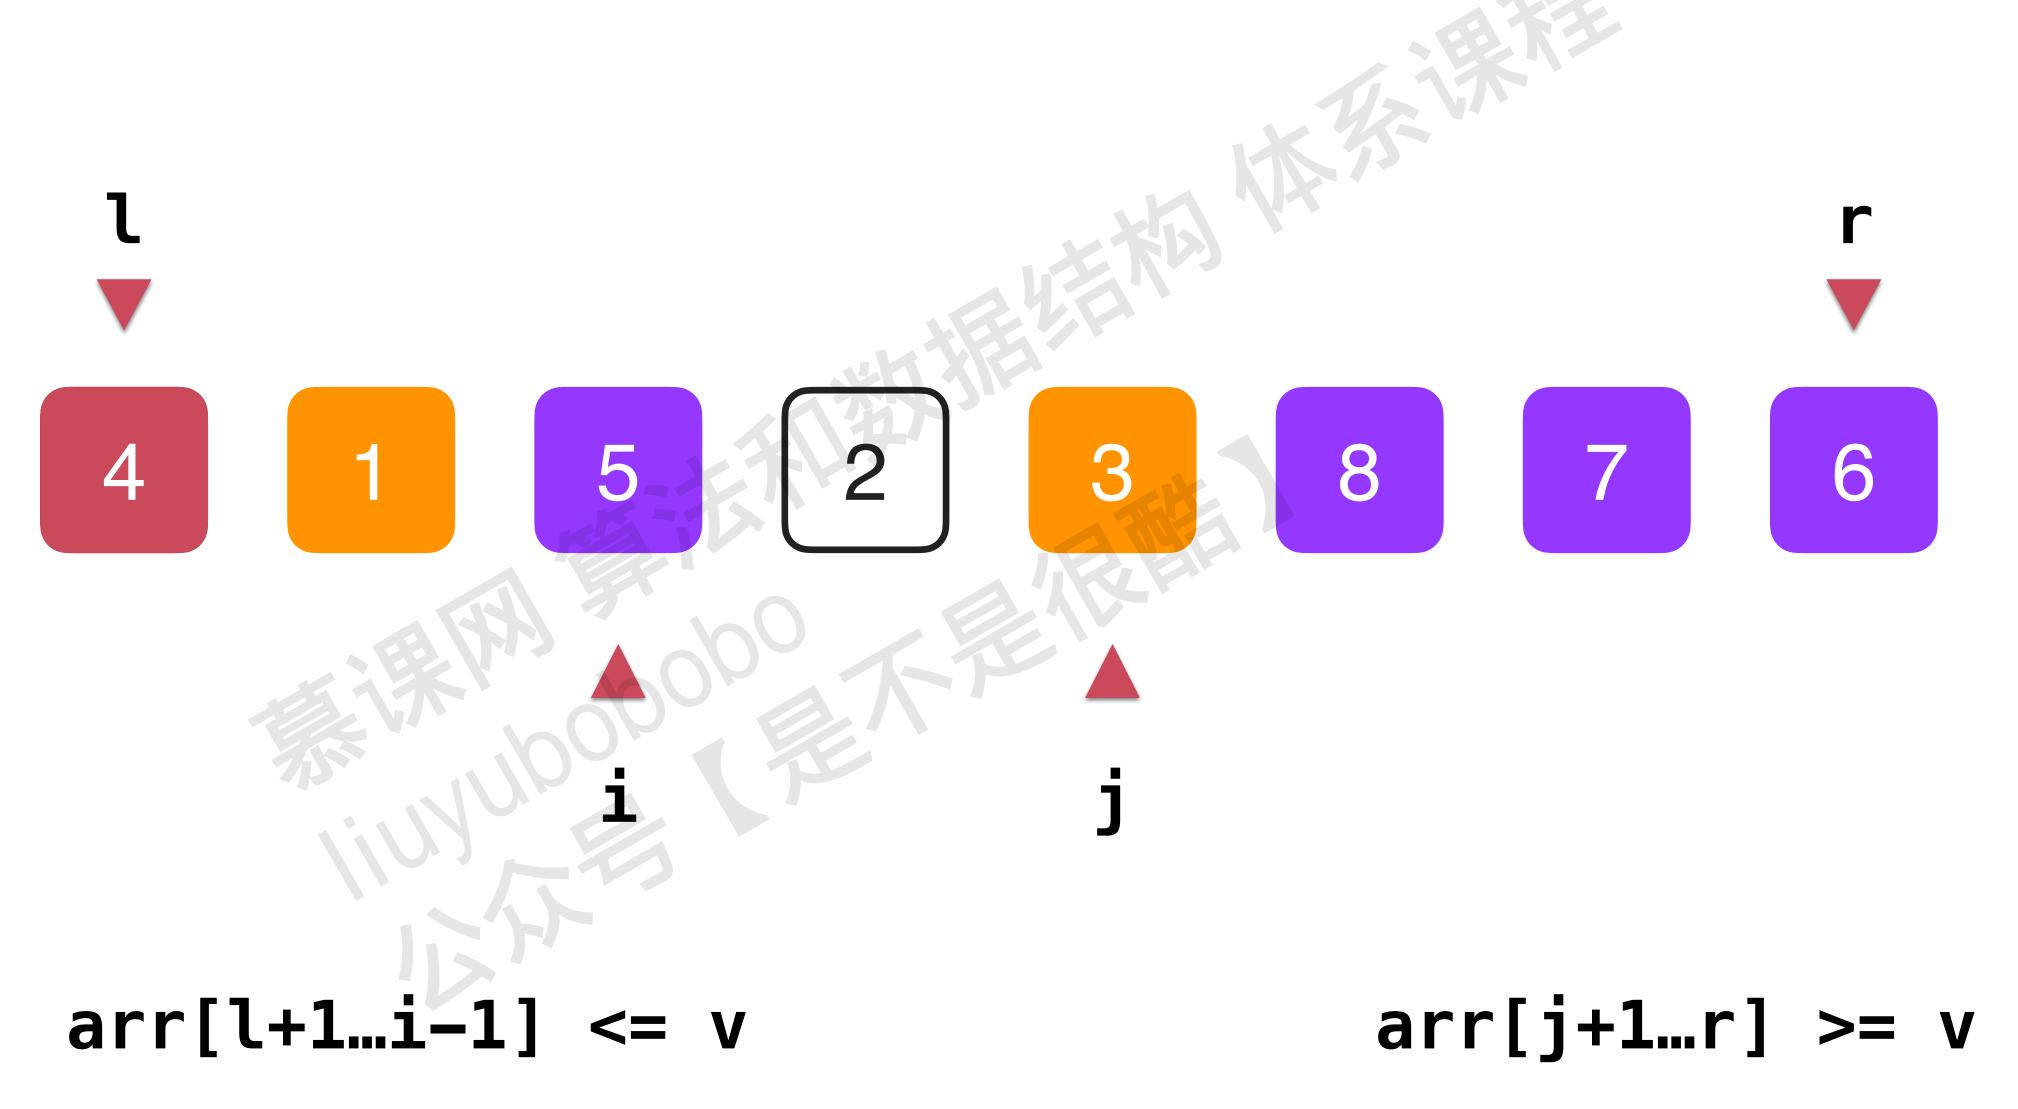

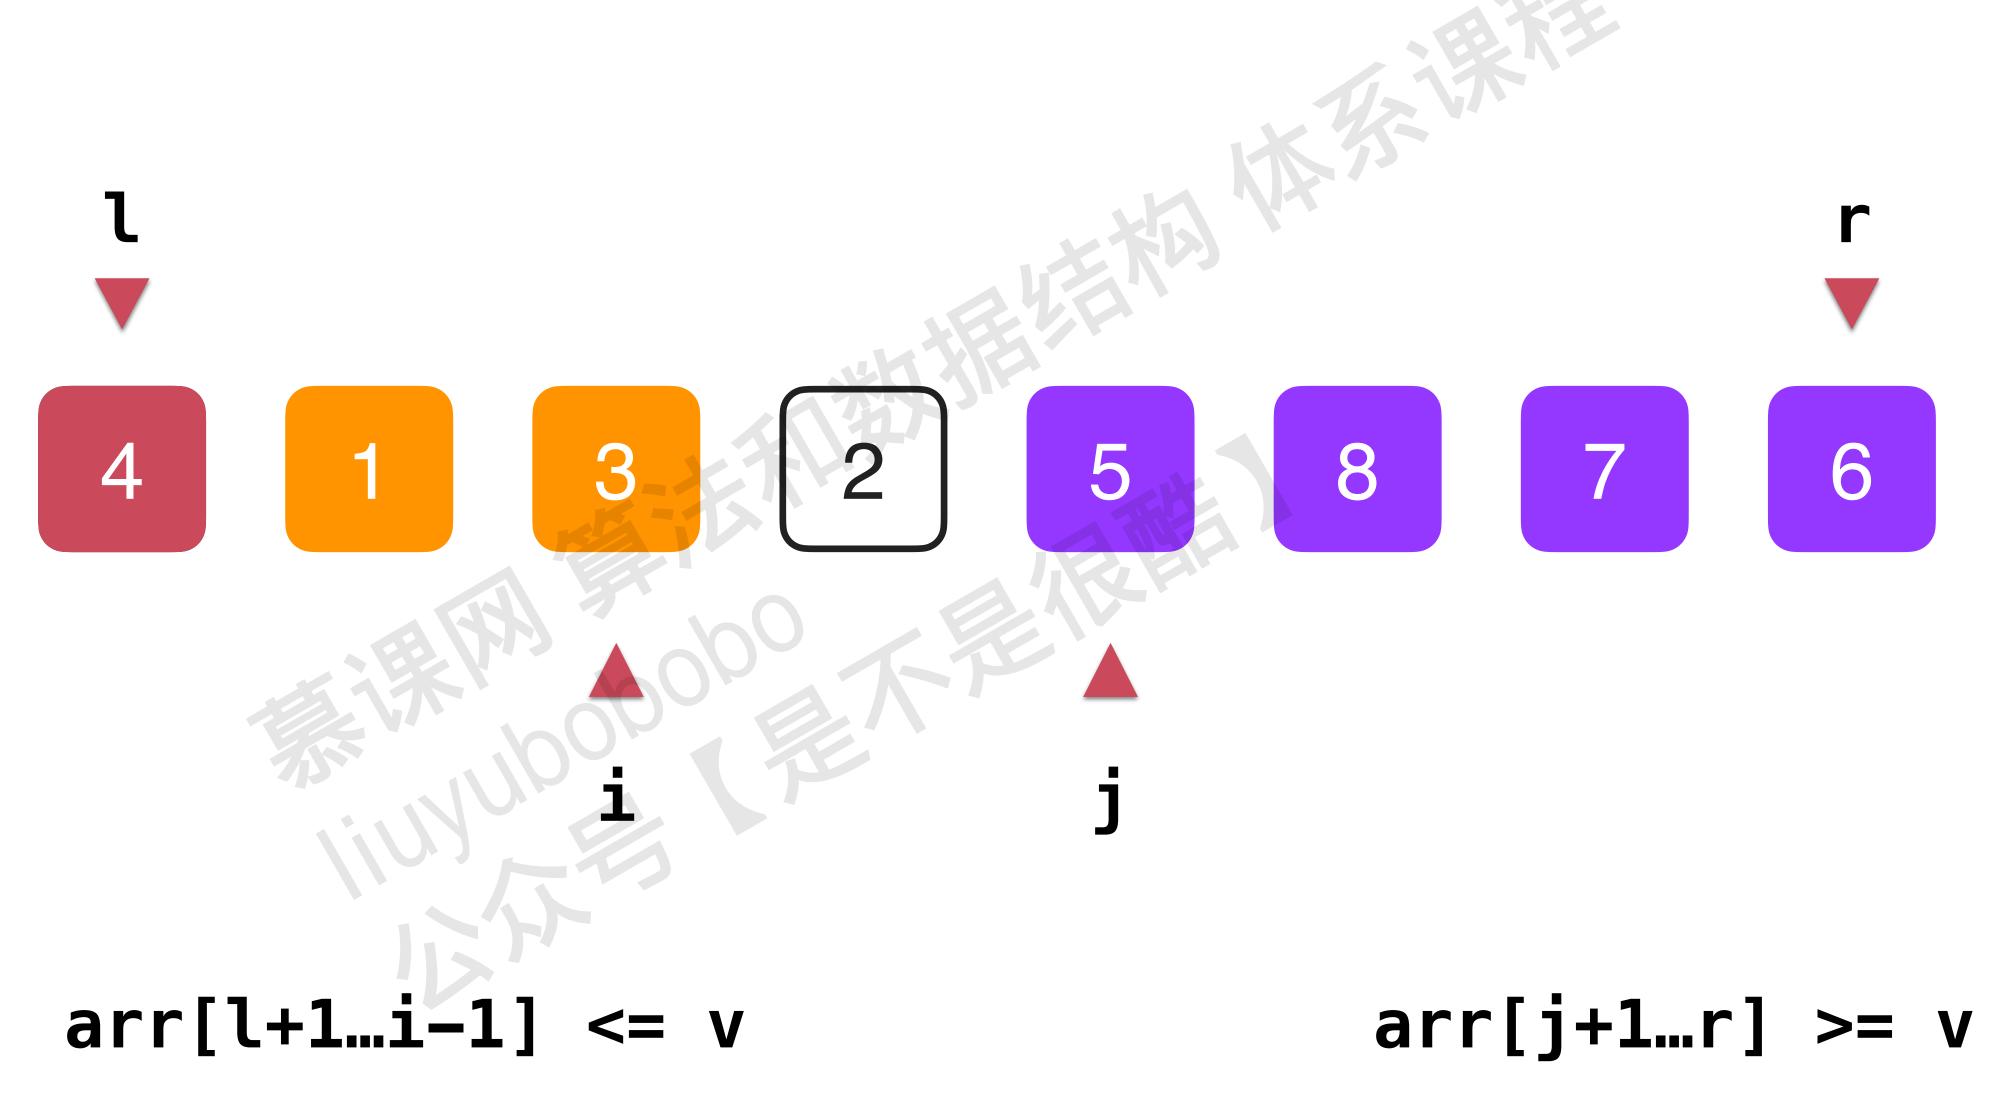

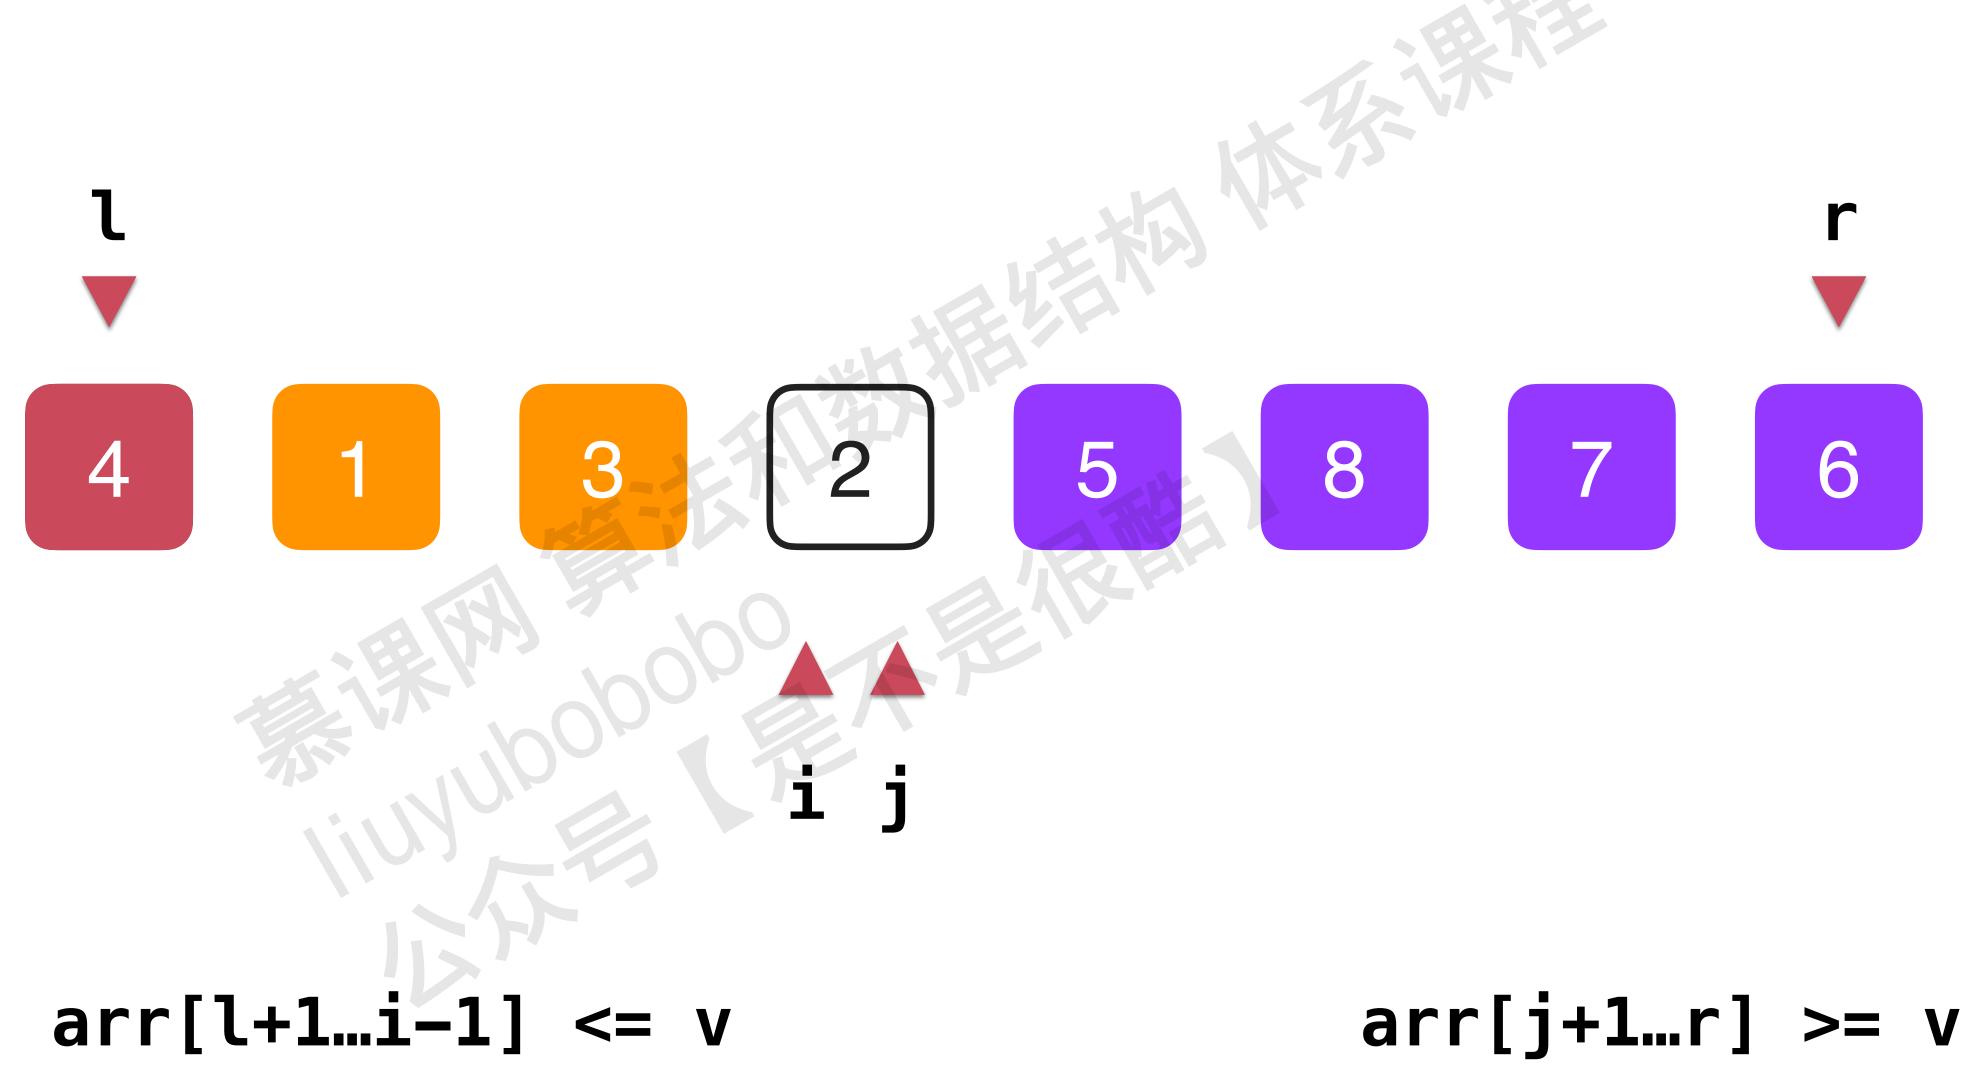

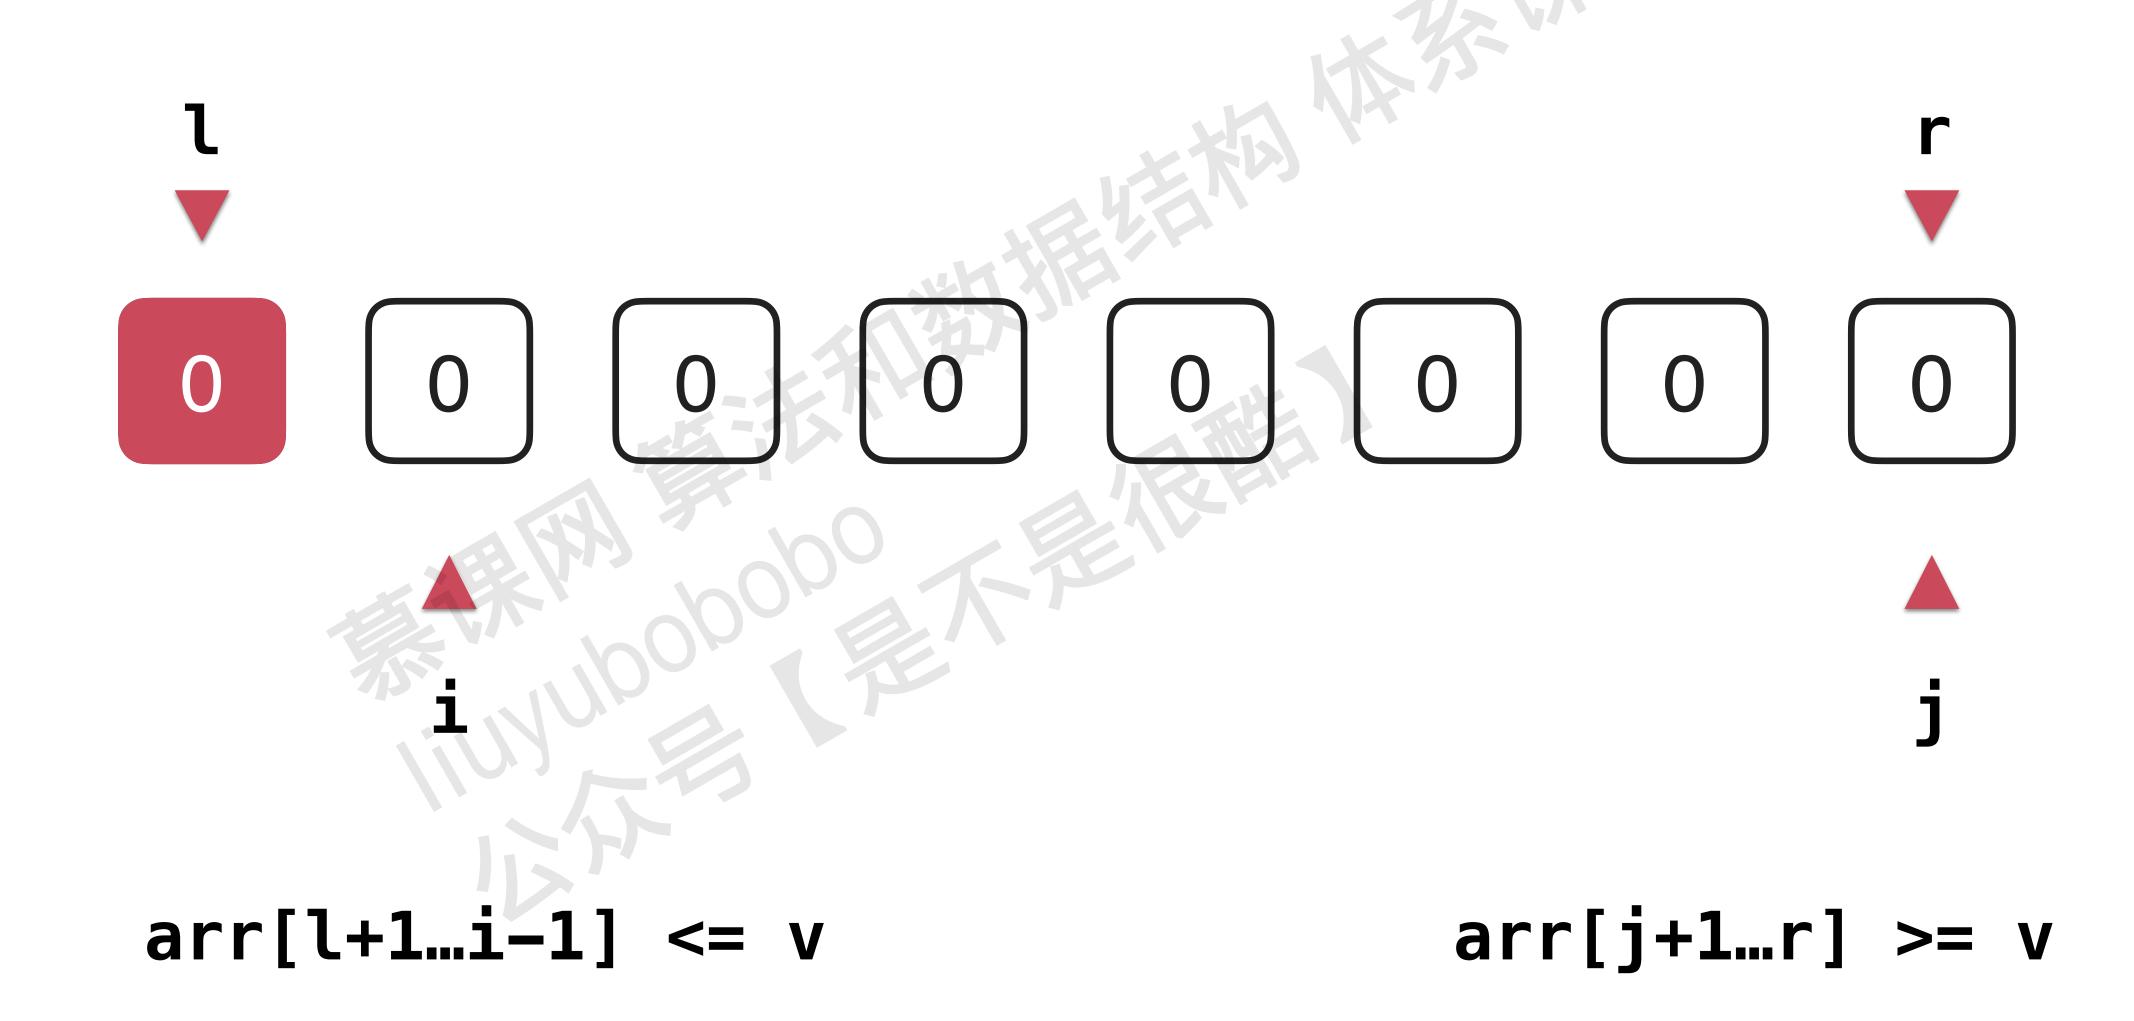

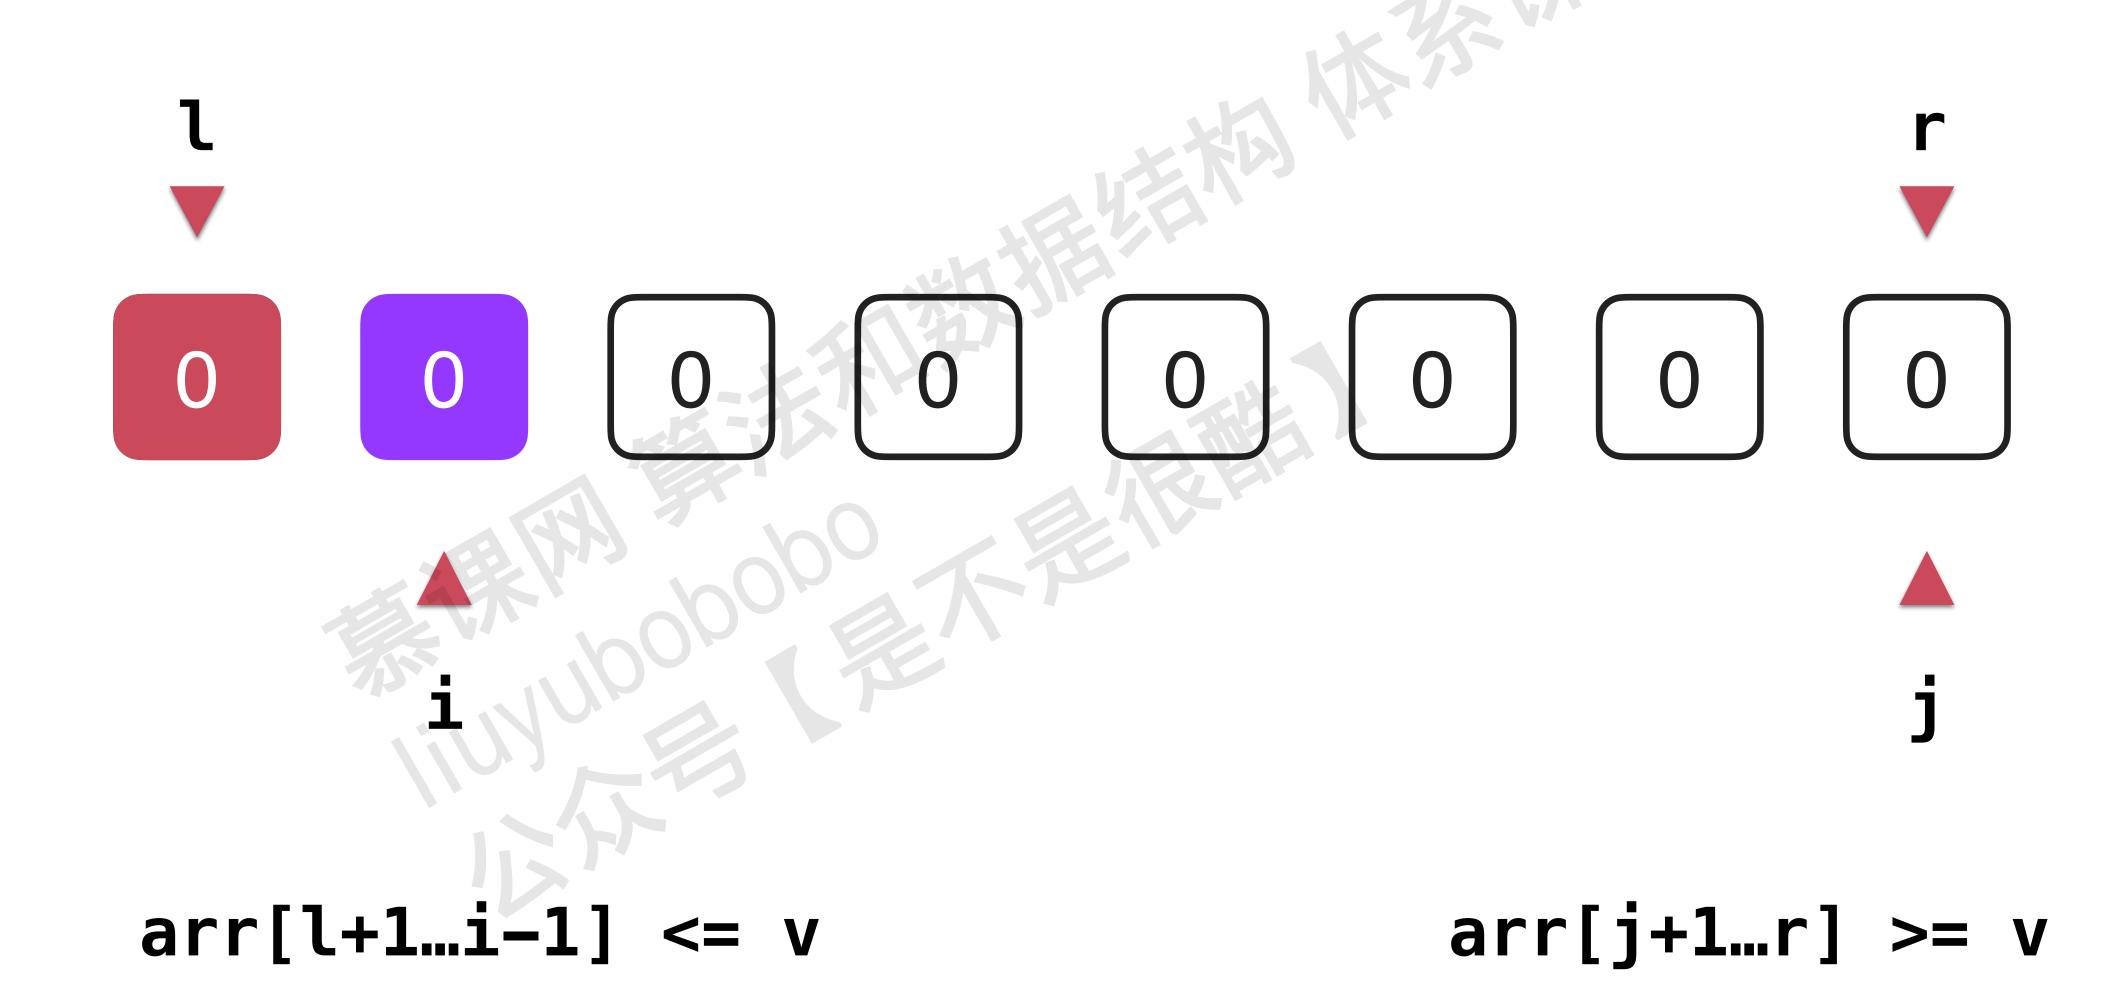

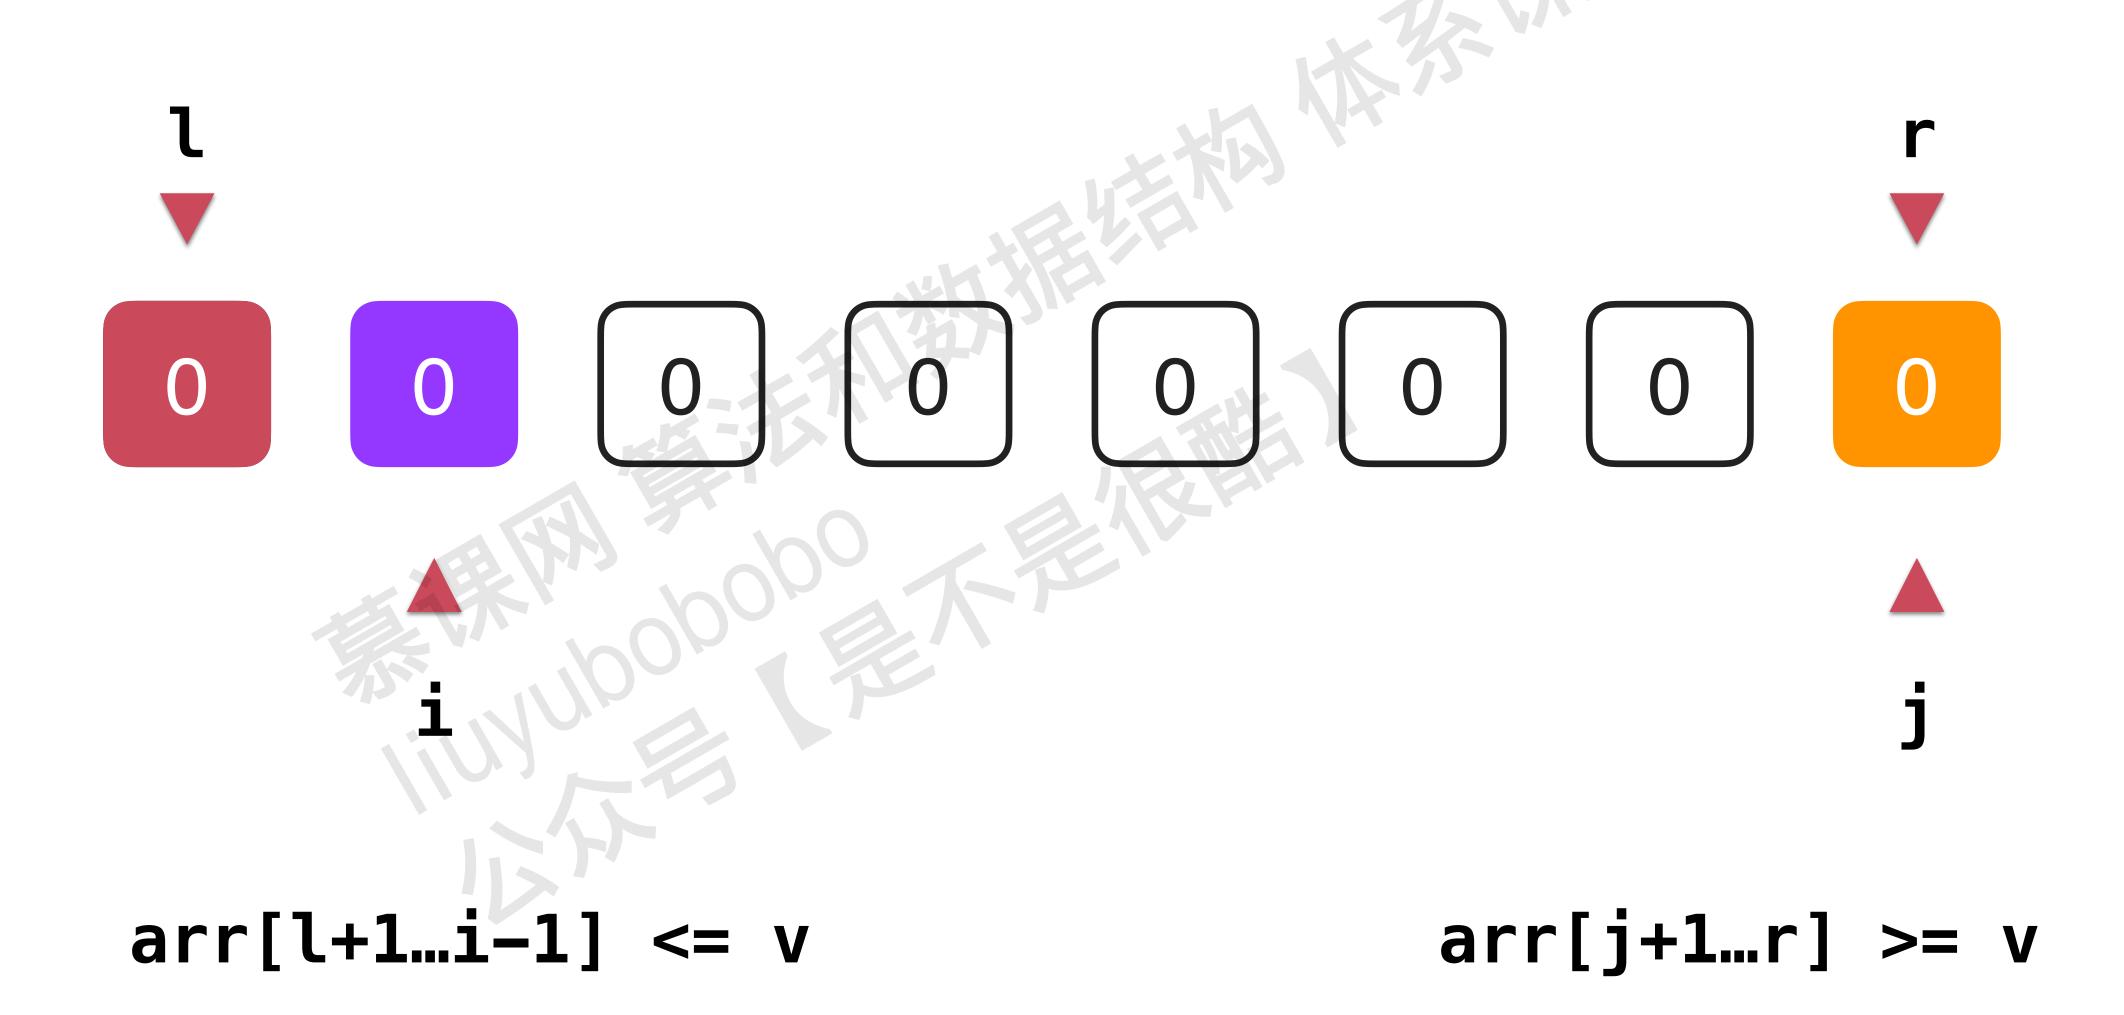

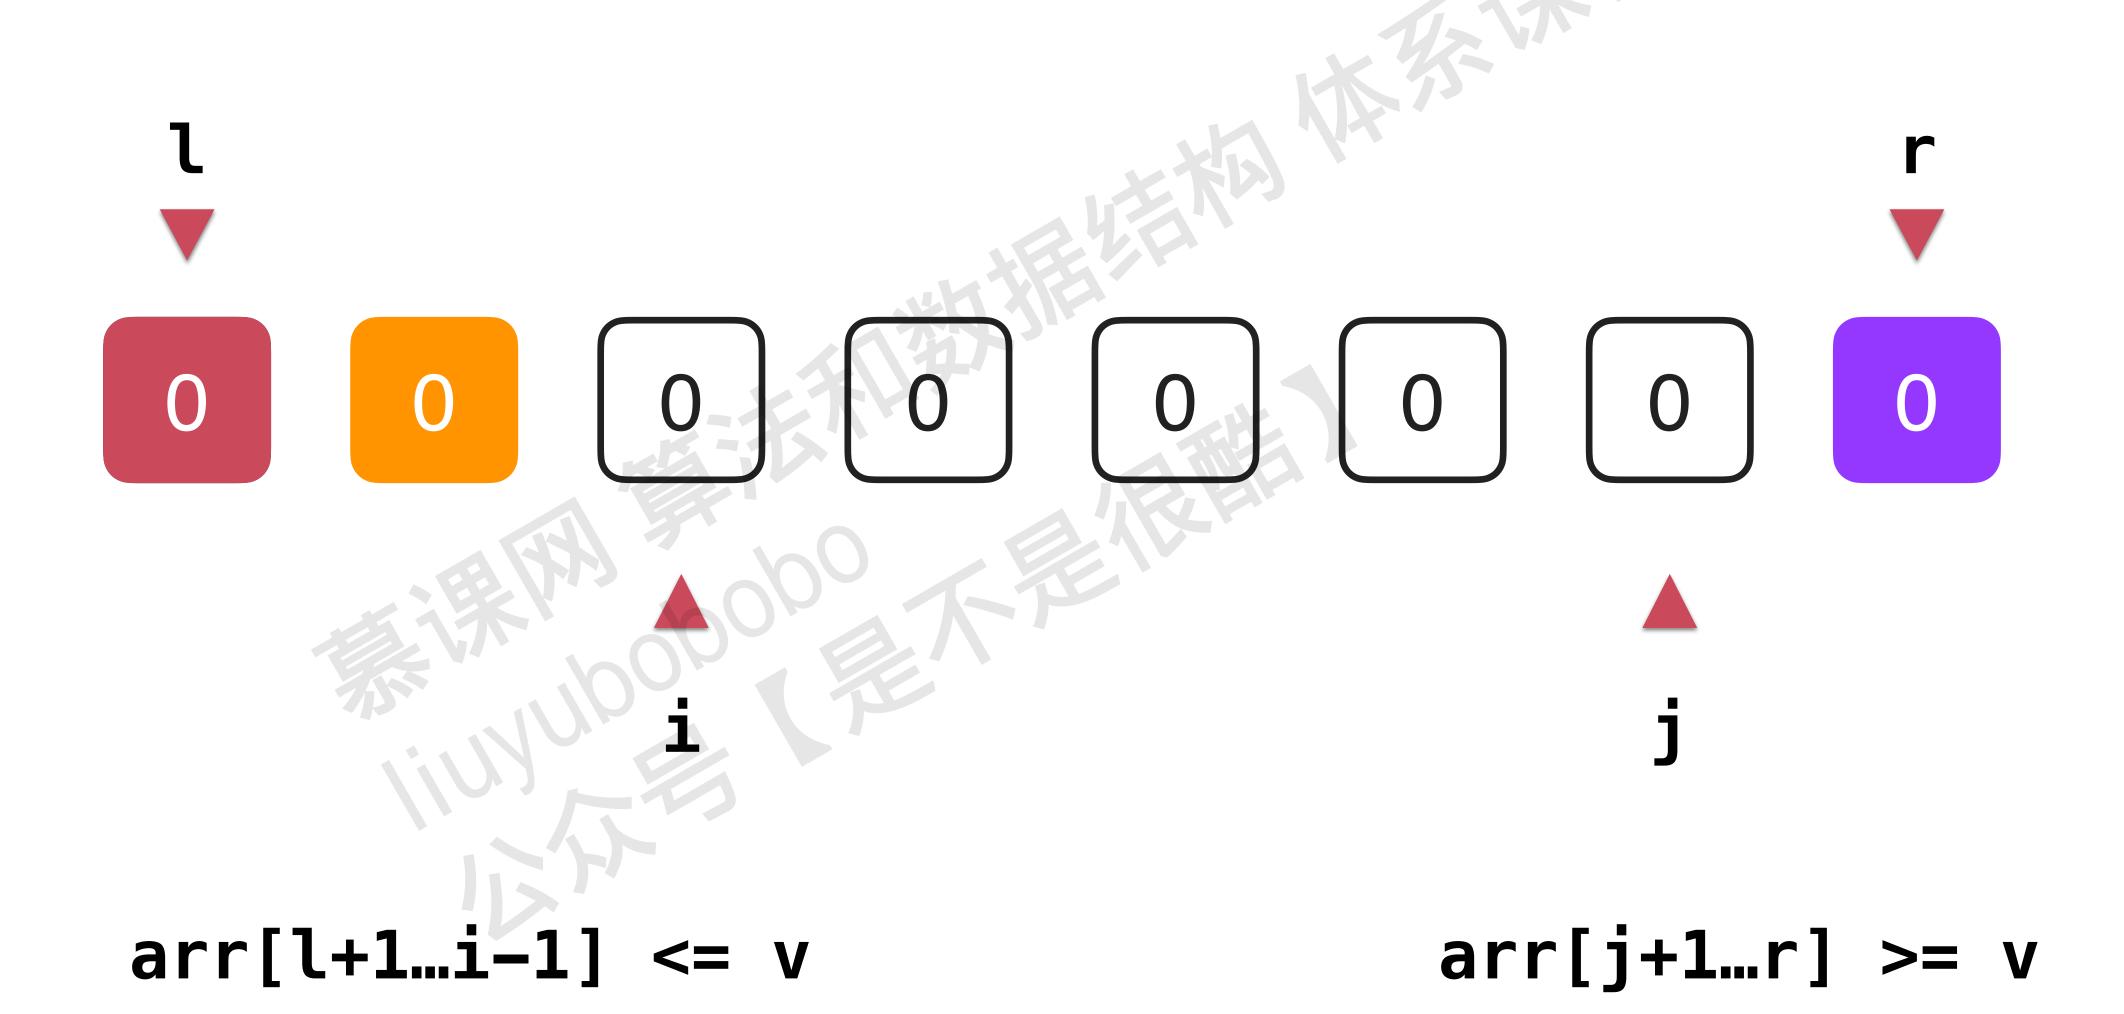

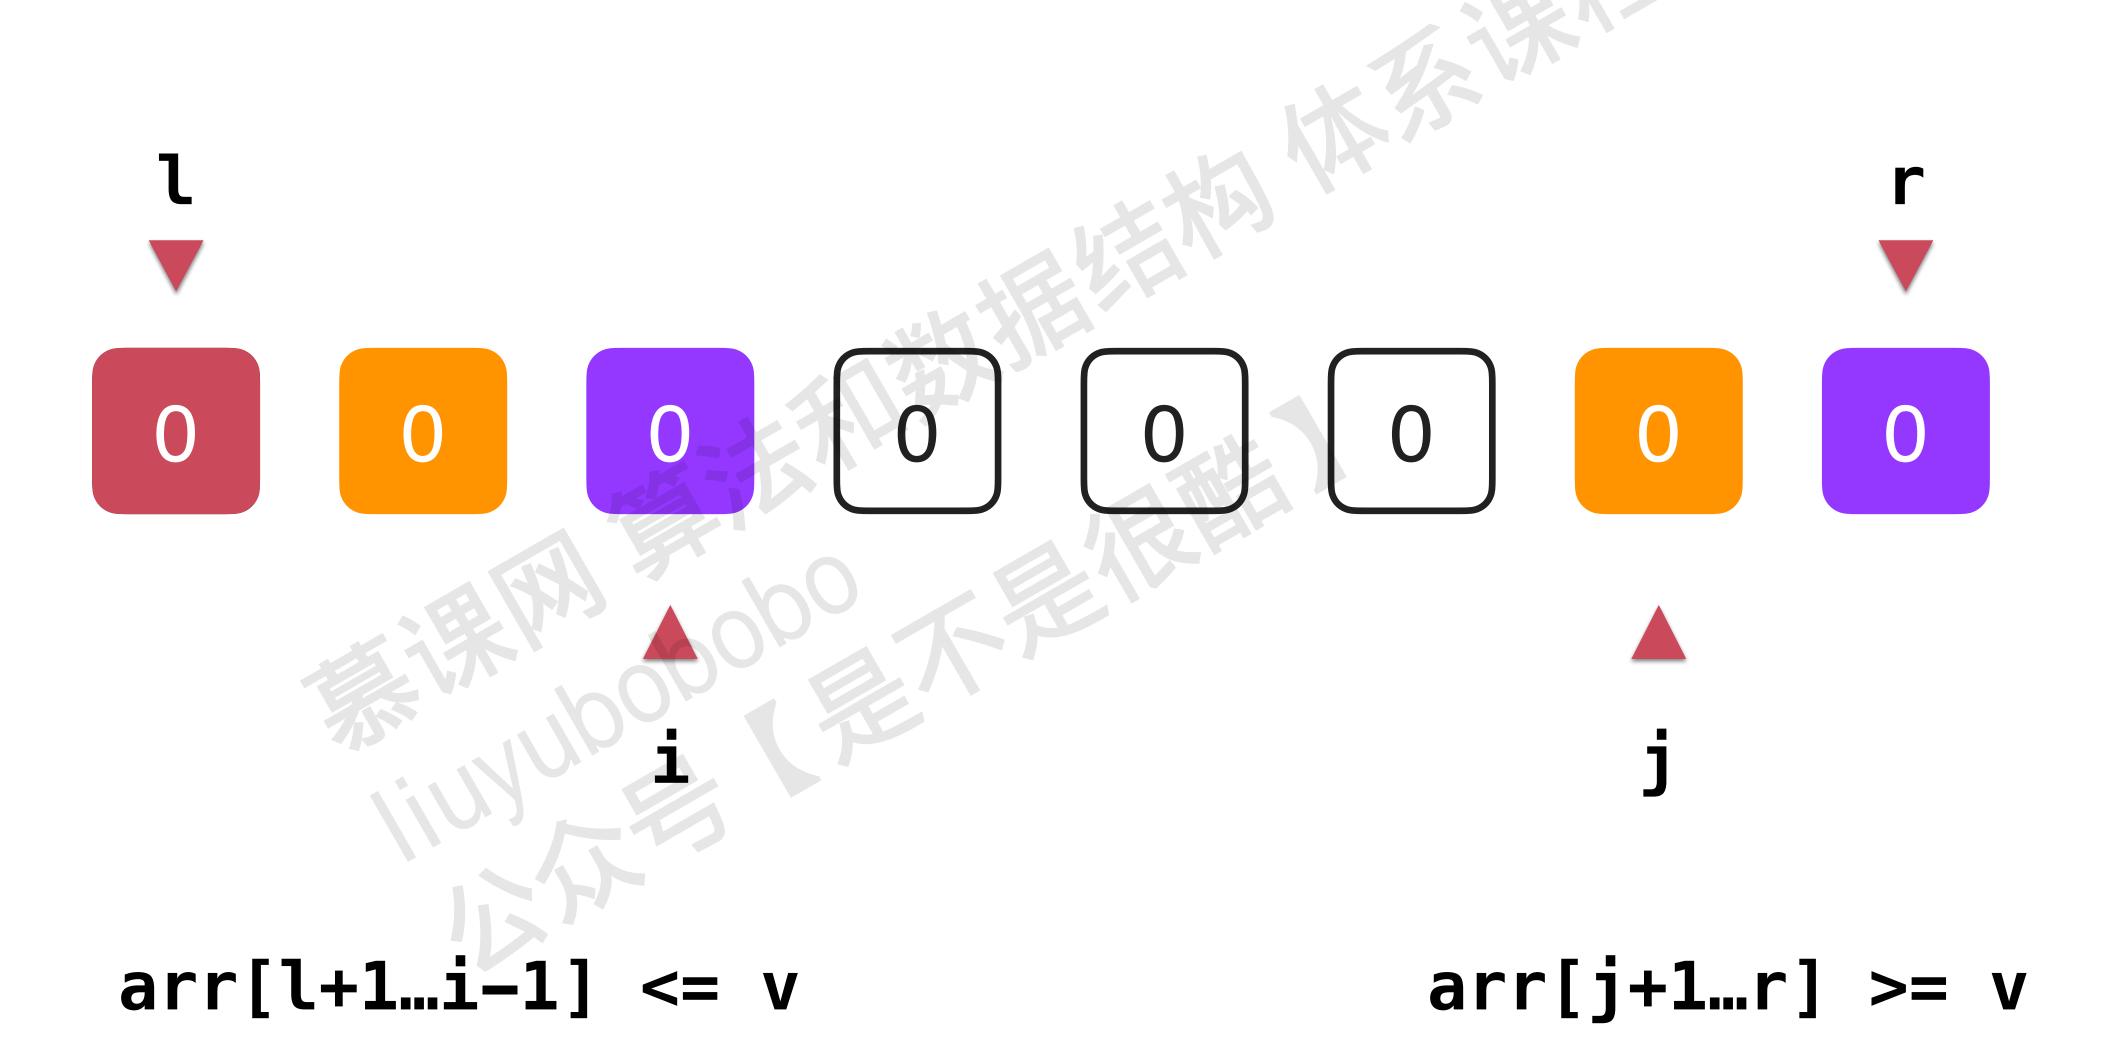

Partition2 arr[l+1...i-1] <= v arr[j+1...r] >= v

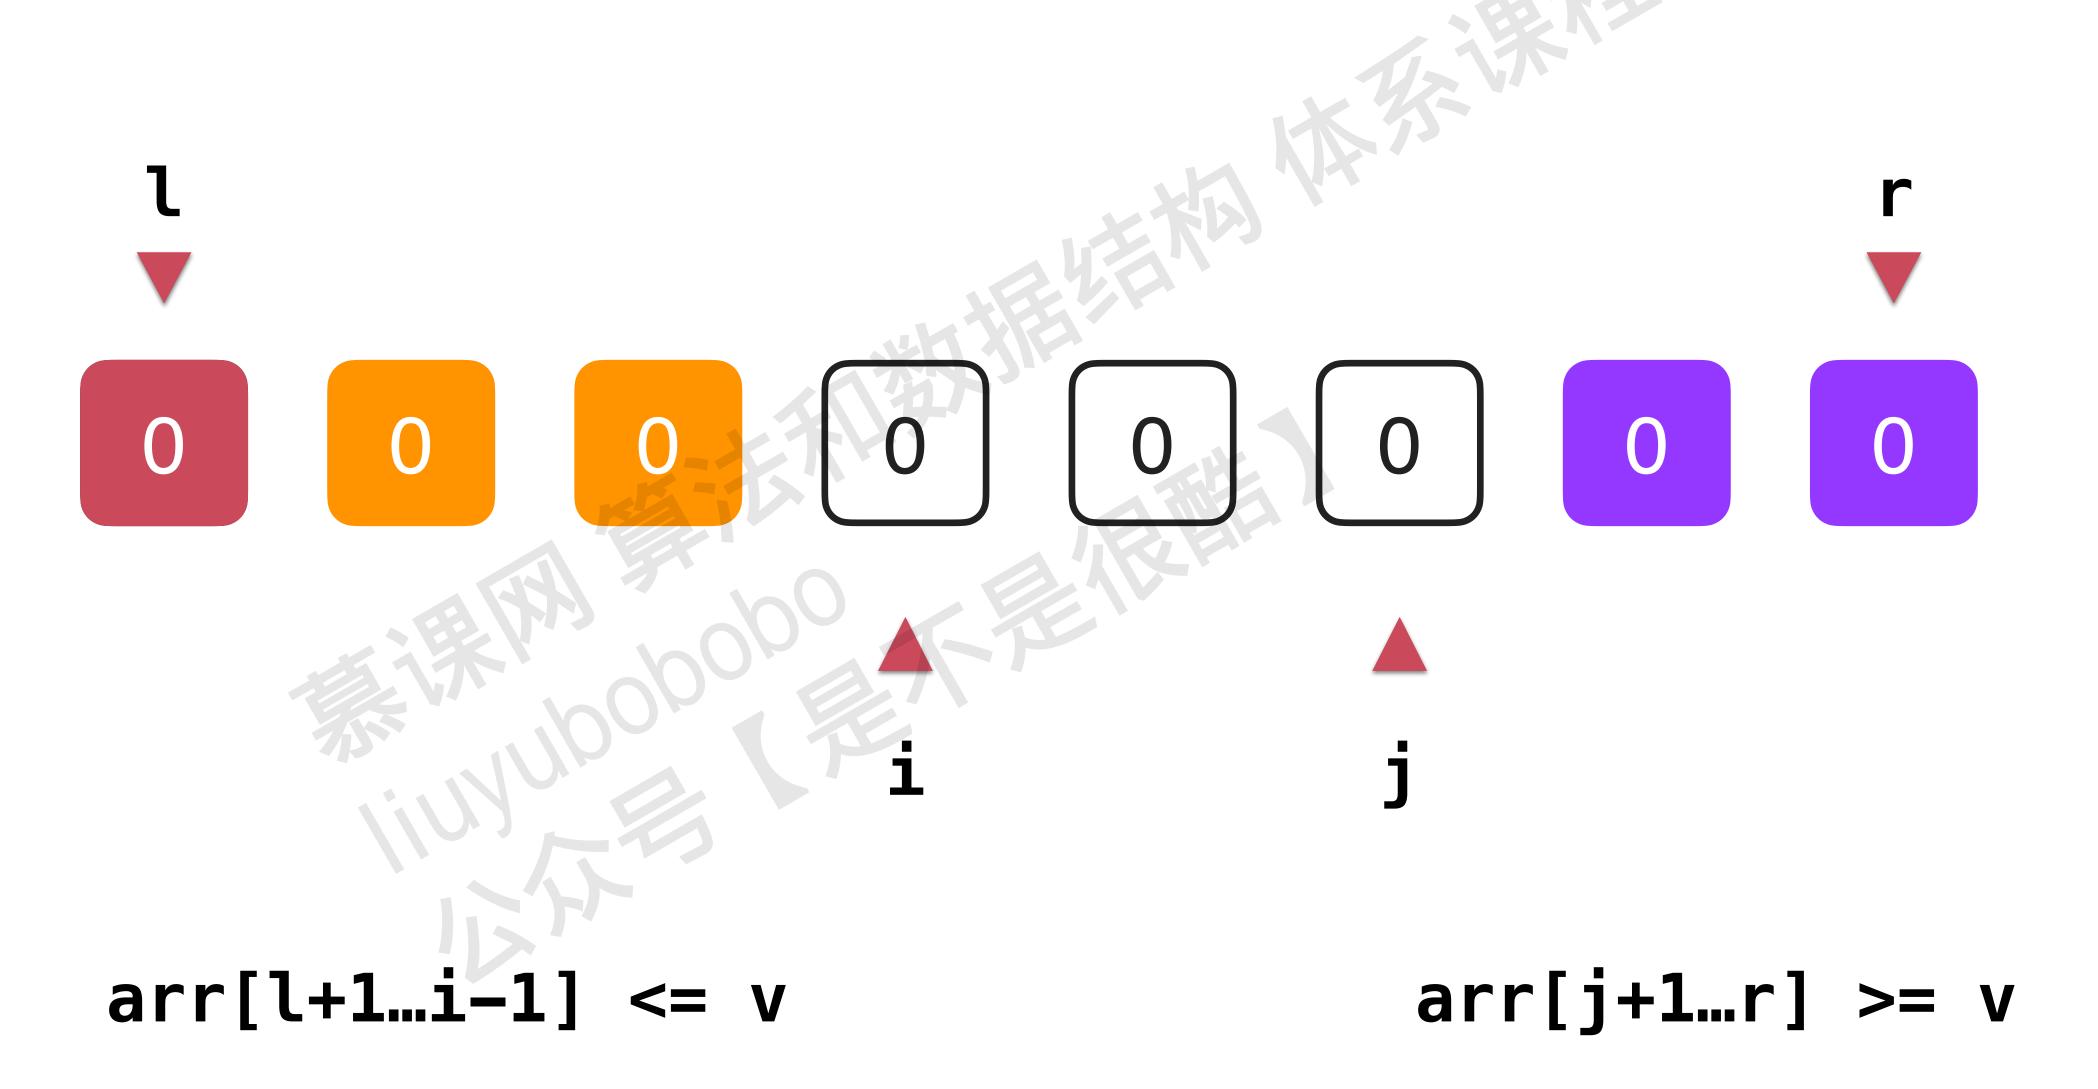

Partition2 arr[l+1...i-1] <= v arr[j+1...r] >= v

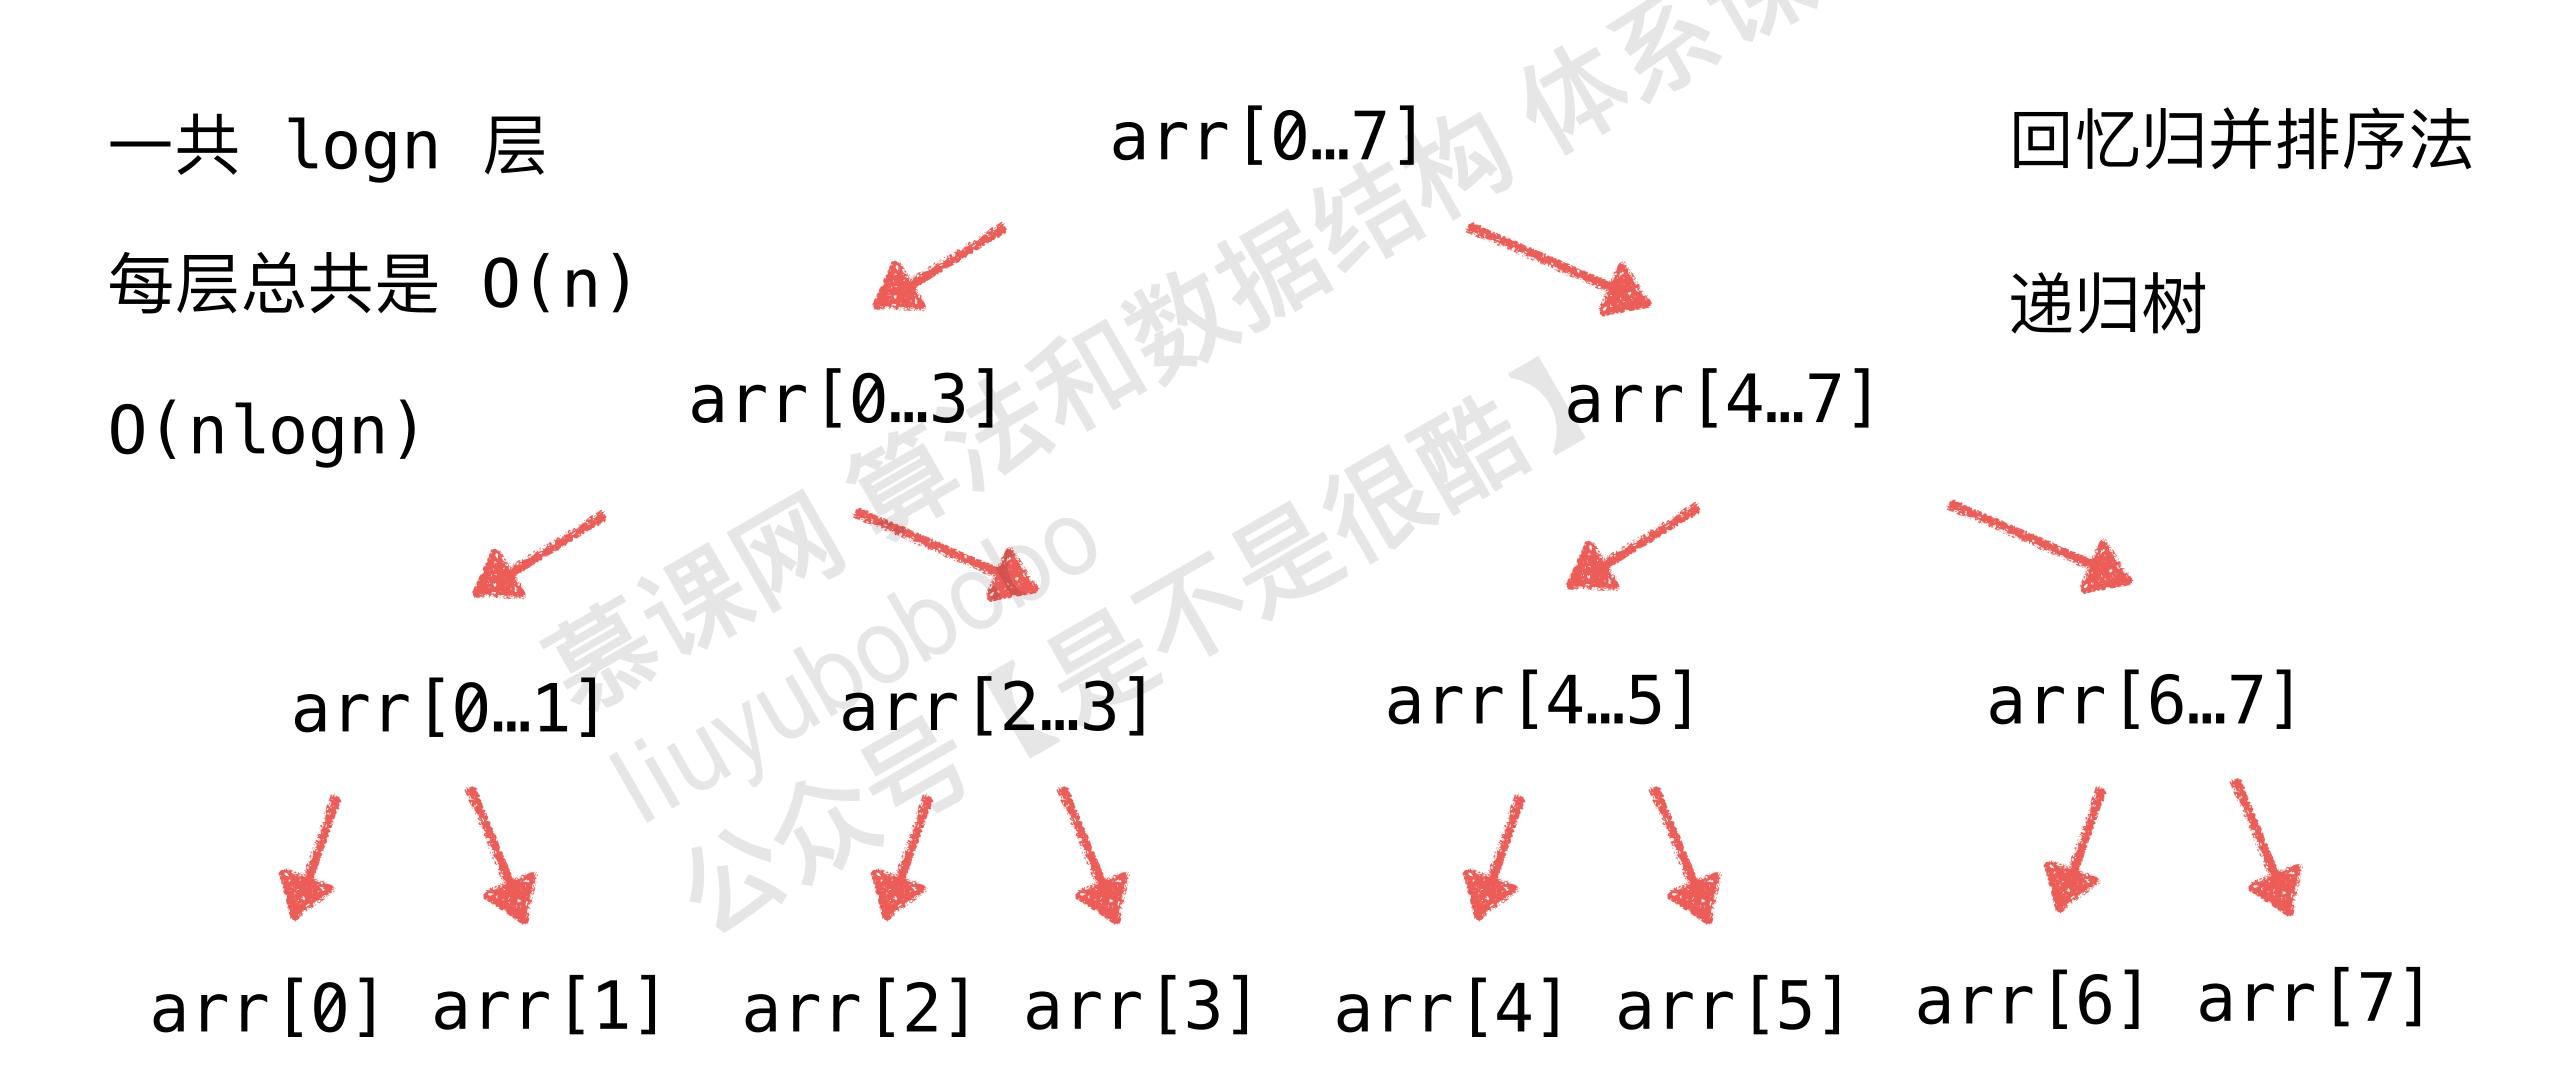

Partition2 arr[l+1...i-1] <= v arr[j+1...r] >= v

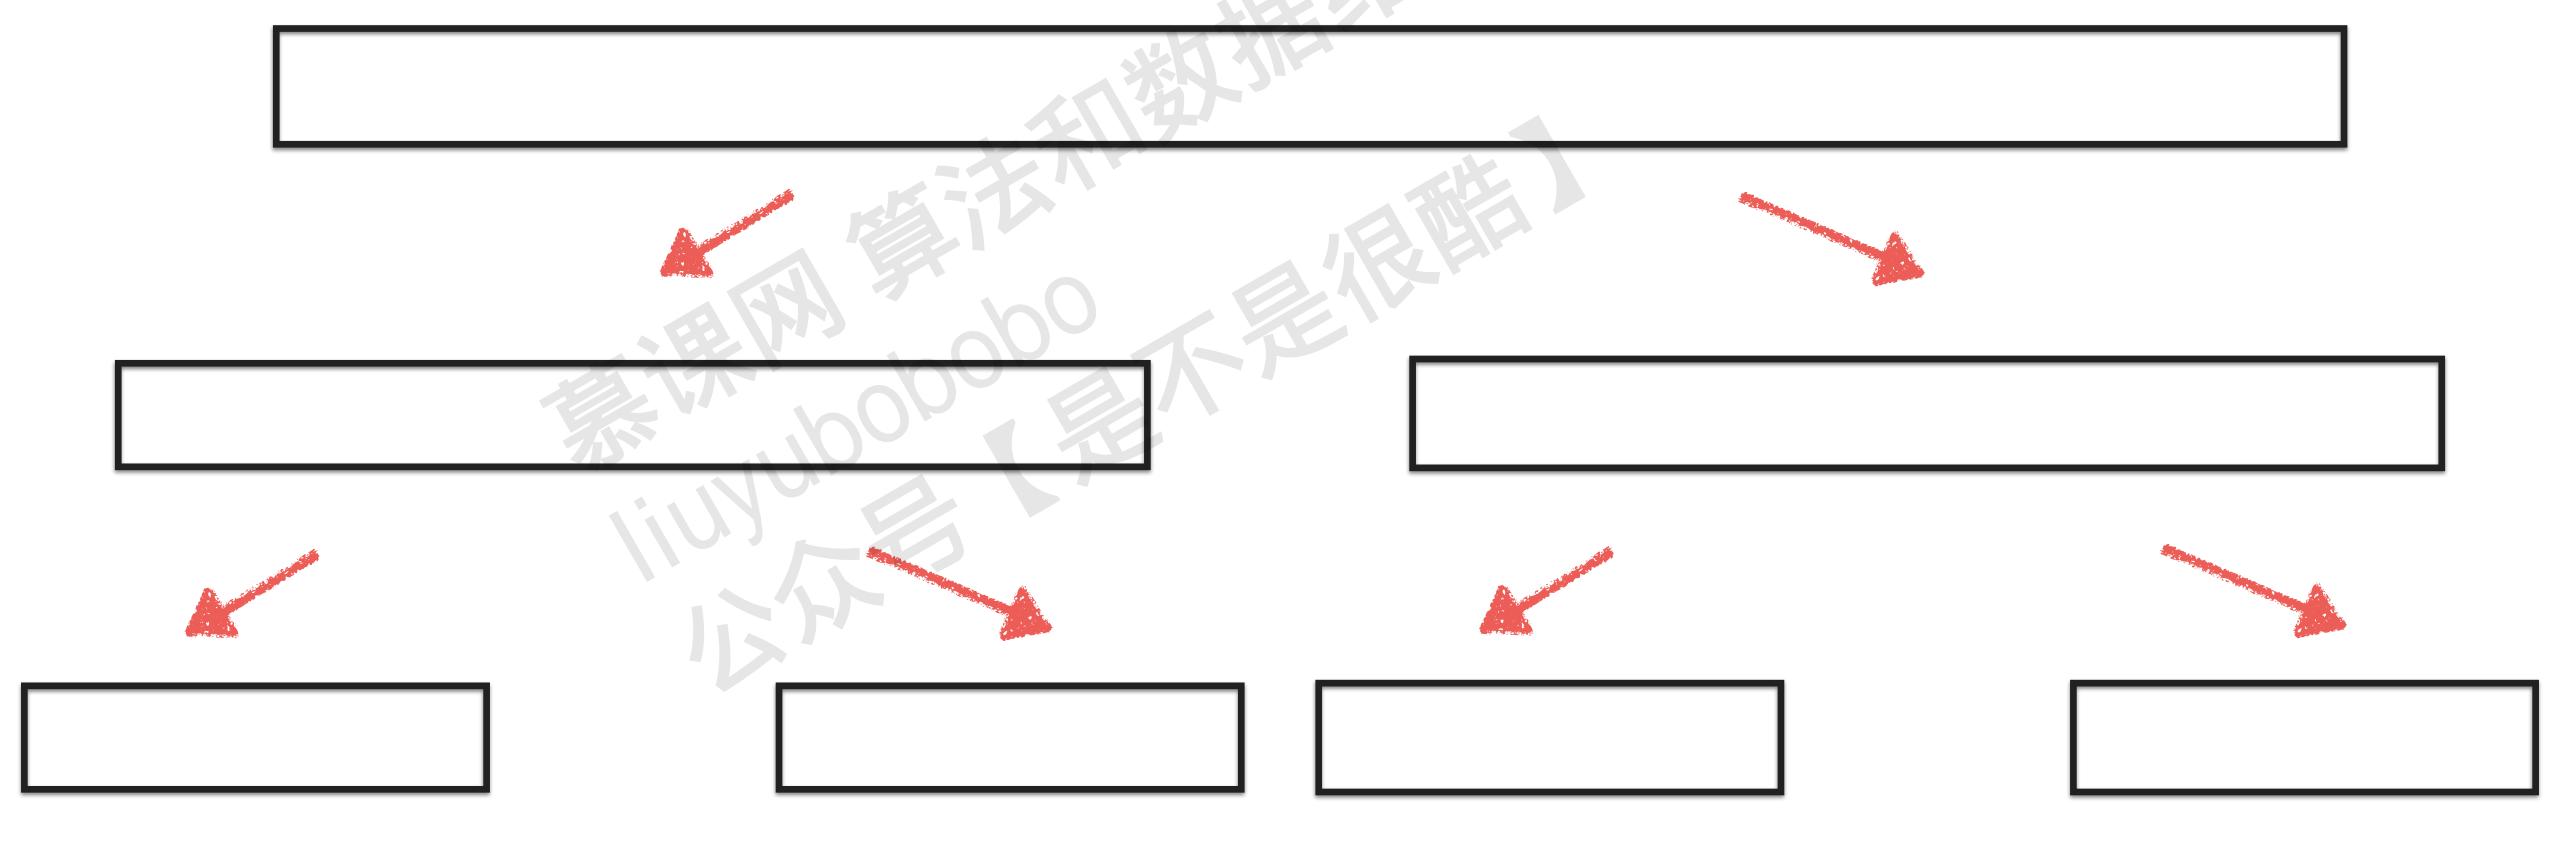

Partition2 arr[l+1...i-1] <= v arr[j+1...r] >= v

实现双路快速排序法

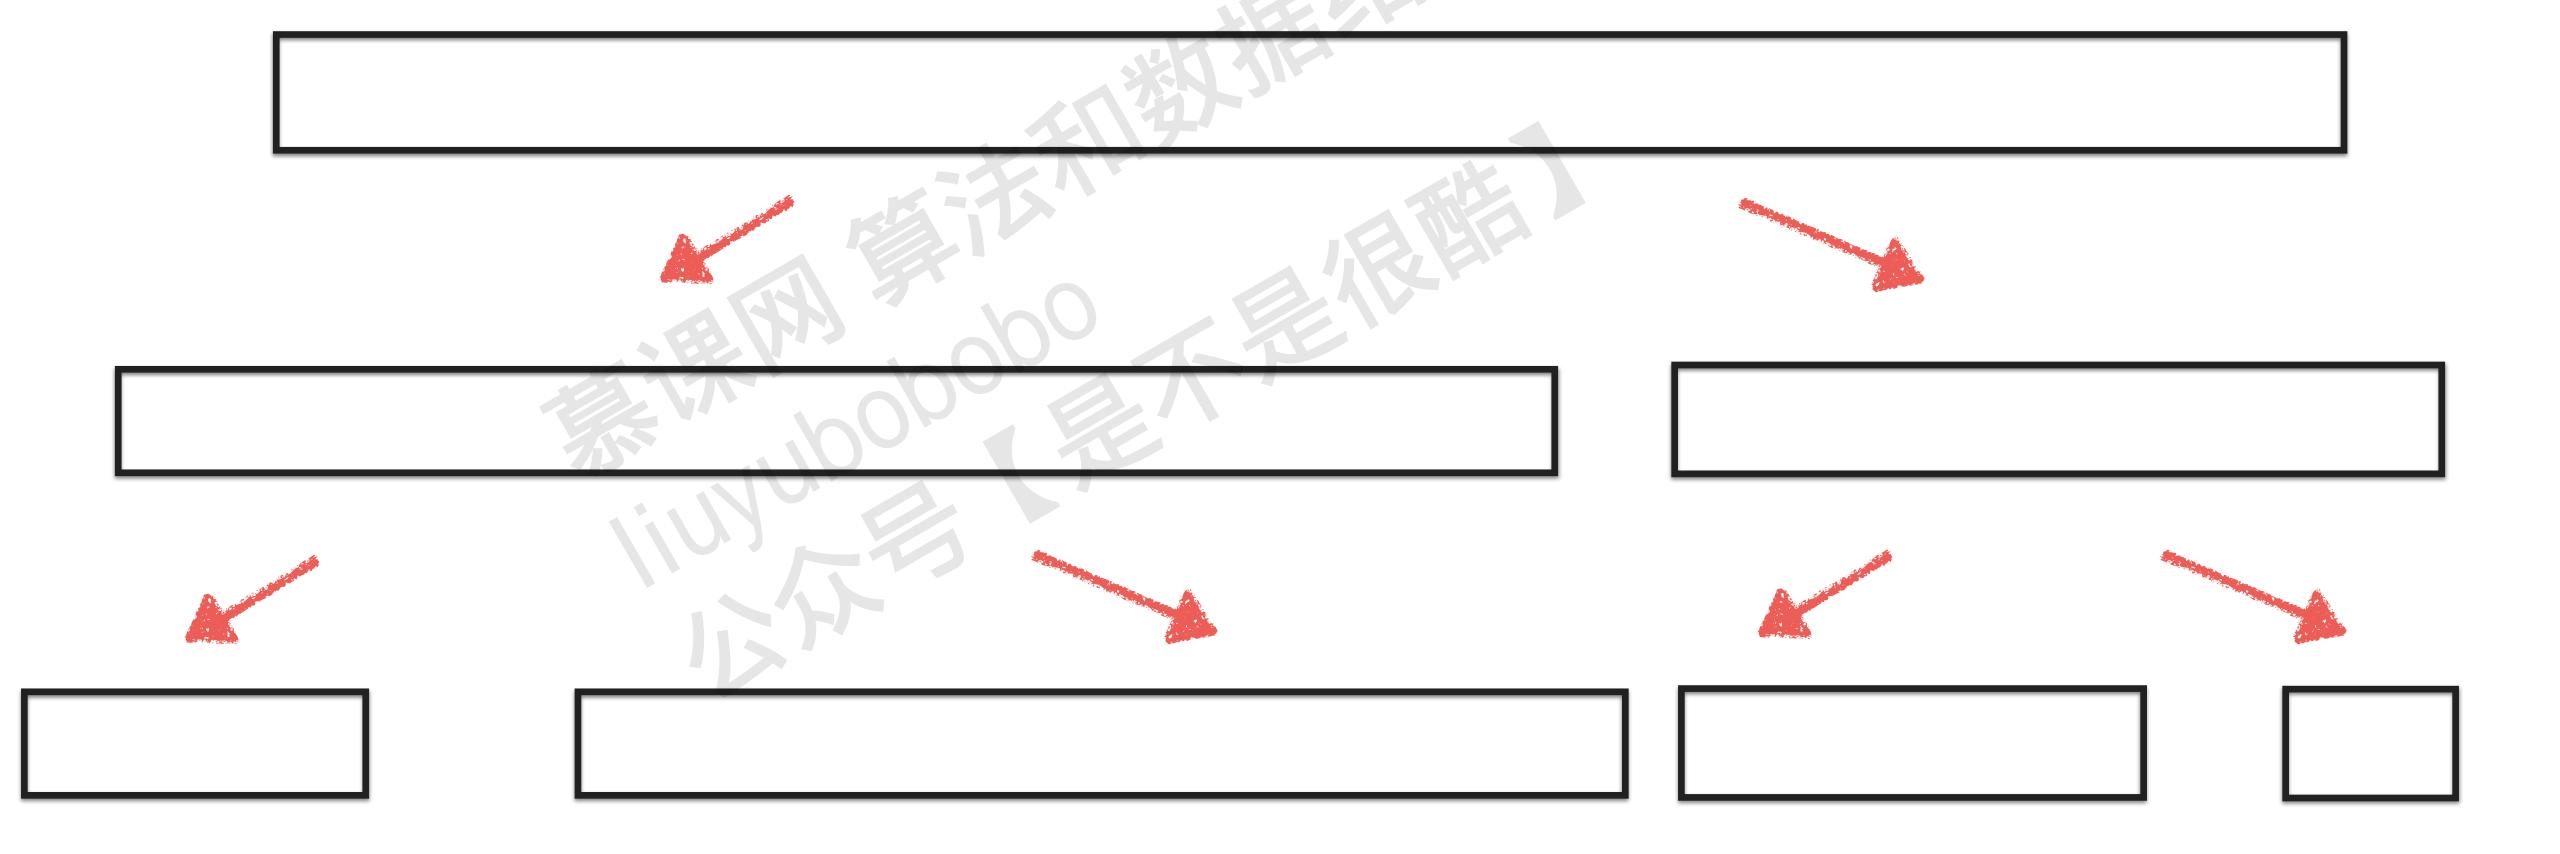

实践:双路快速排序法

归并排序法

快速排序法

快速排序法

最坏复杂度

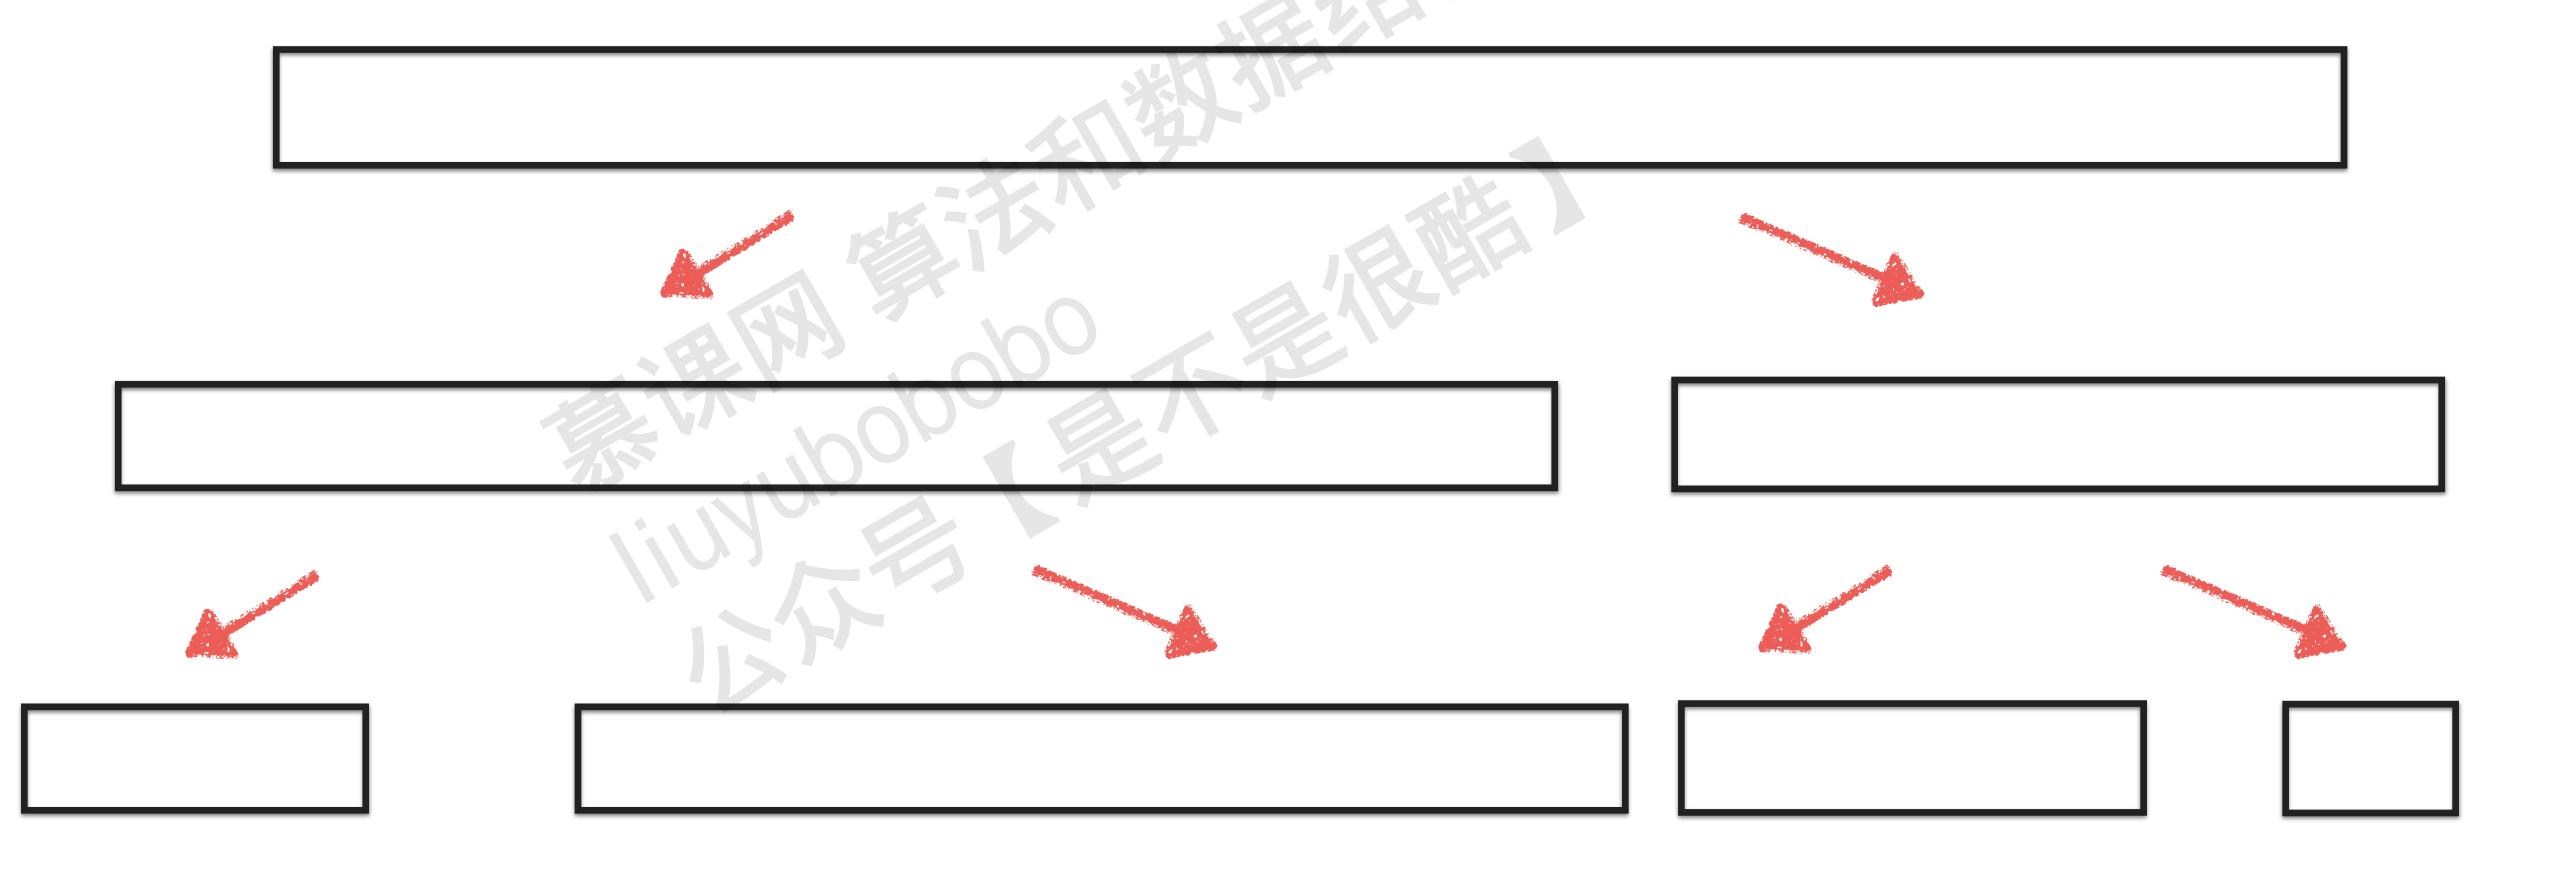

0(n²)

概率非常低

是一个随机算法

使用期望

数学期望的角度看:平分 层数的期望值: 0(logn) 复杂度期望值: 0(nlogn)

更严谨的数学推导:参考《算法导论》

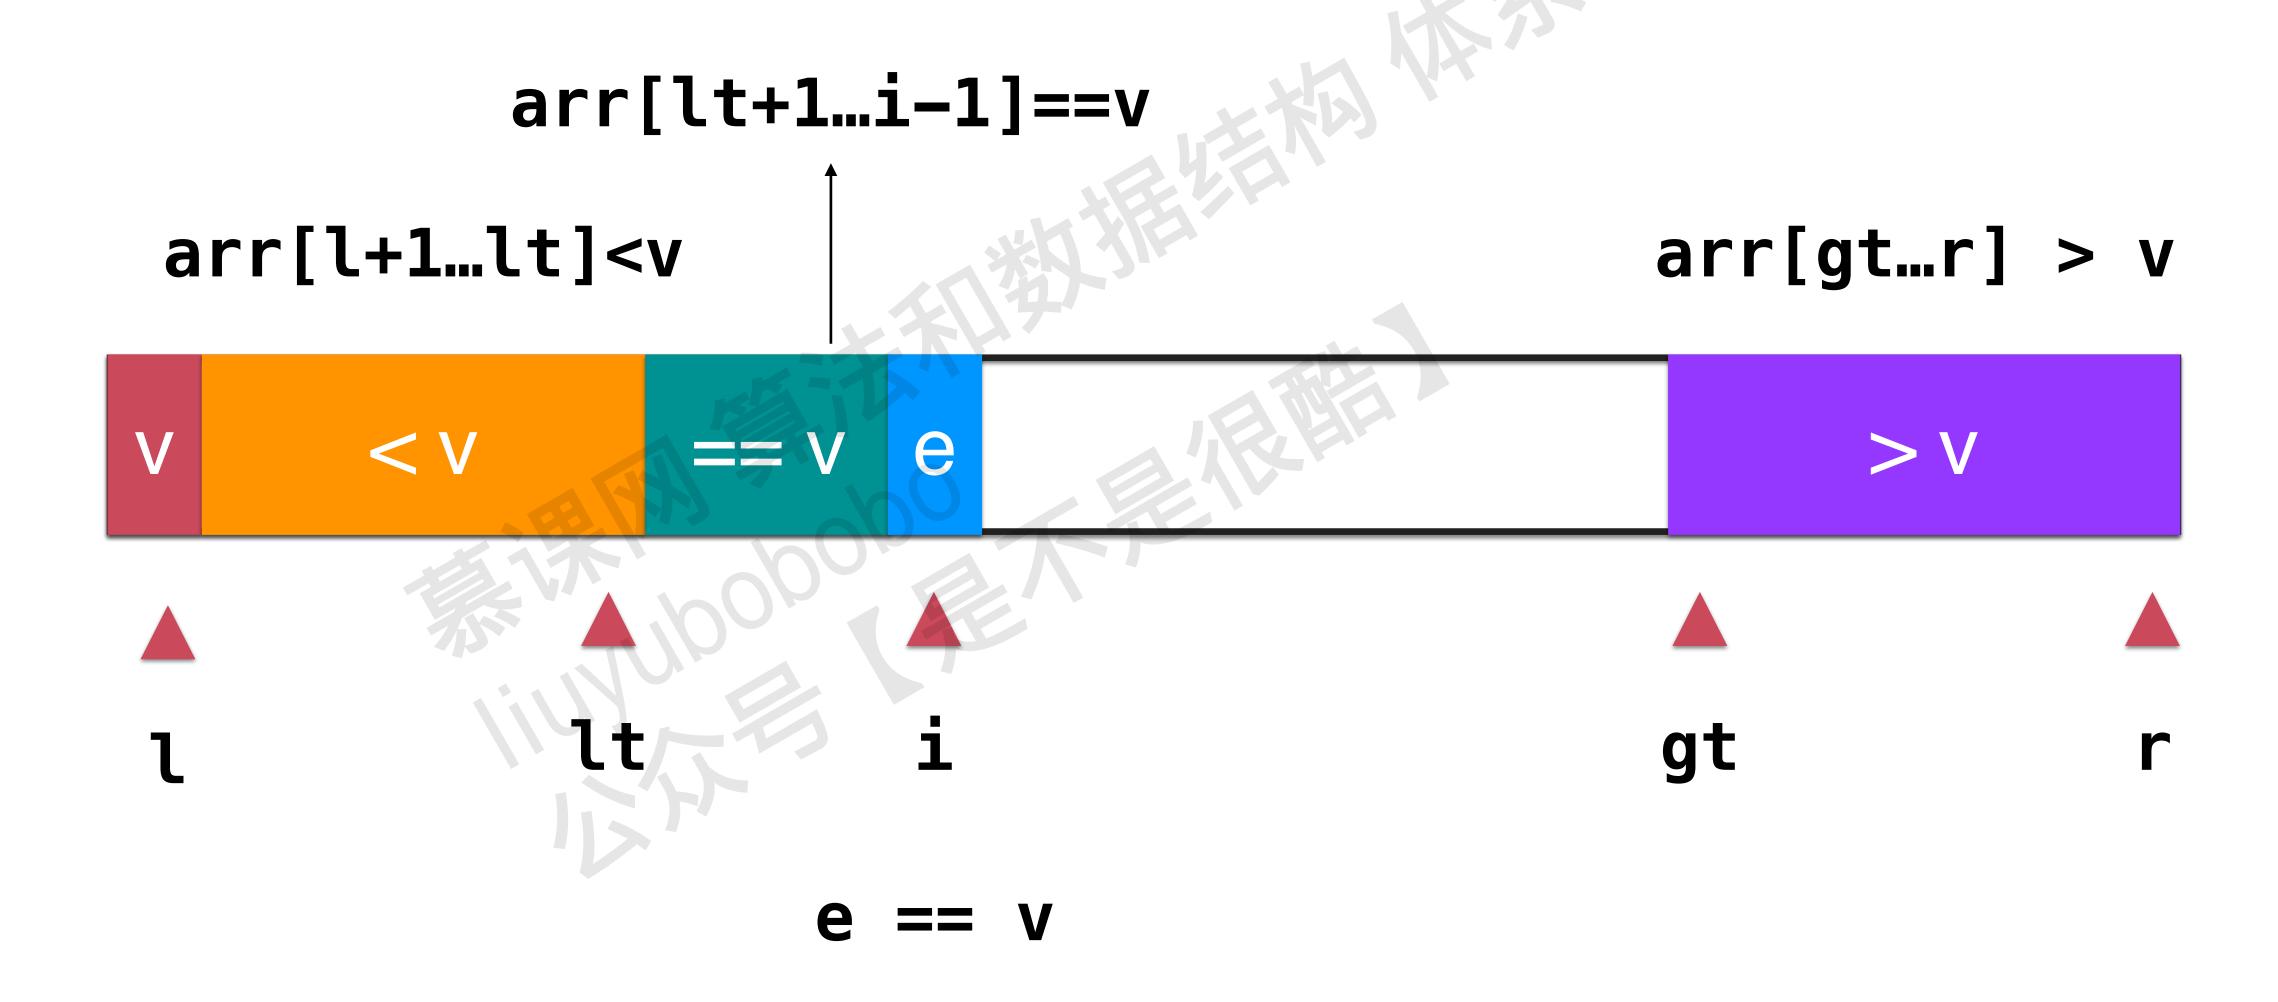

普通算法: 看最差 能找到一组数据 100% 恶化

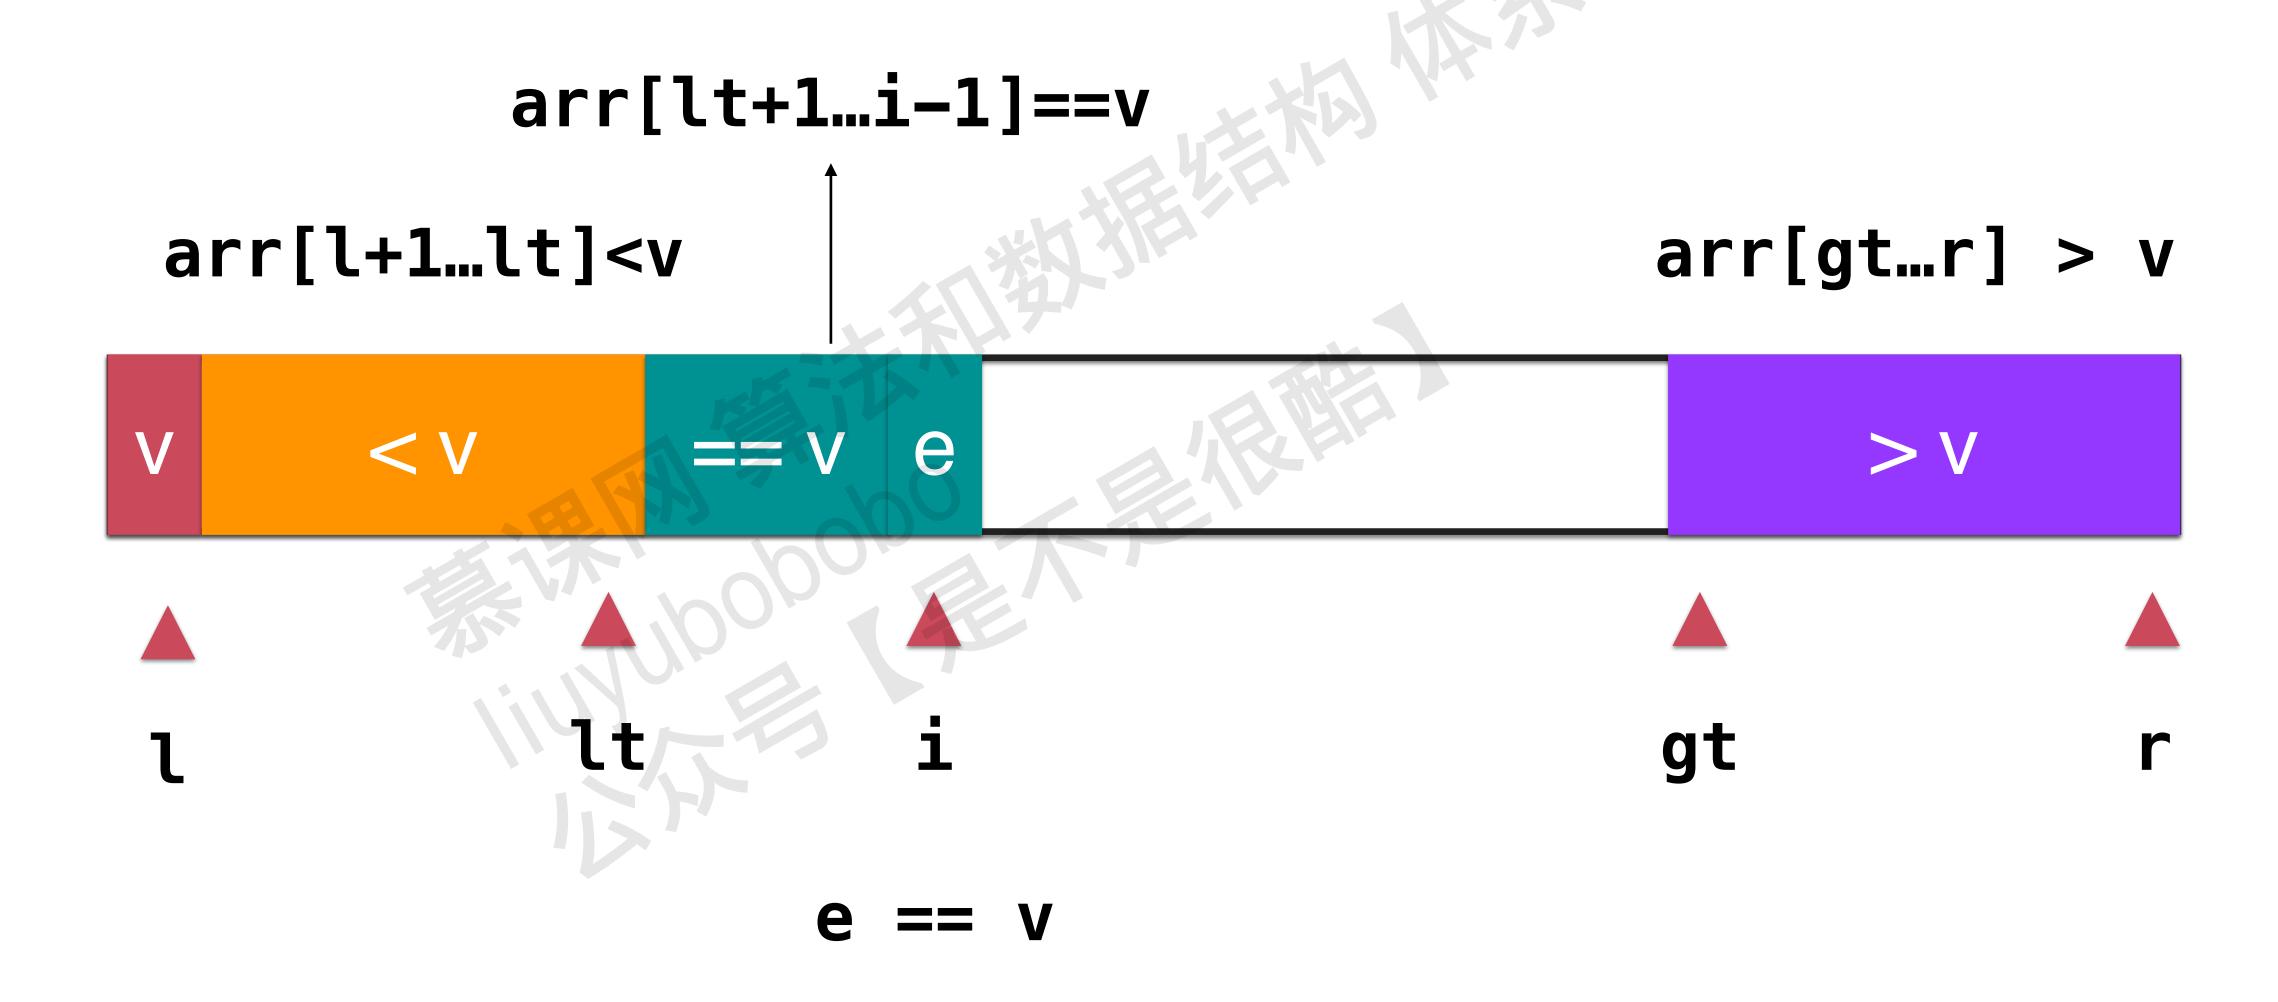

随机算法: 看期望 没有一组数据能 100% 恶化

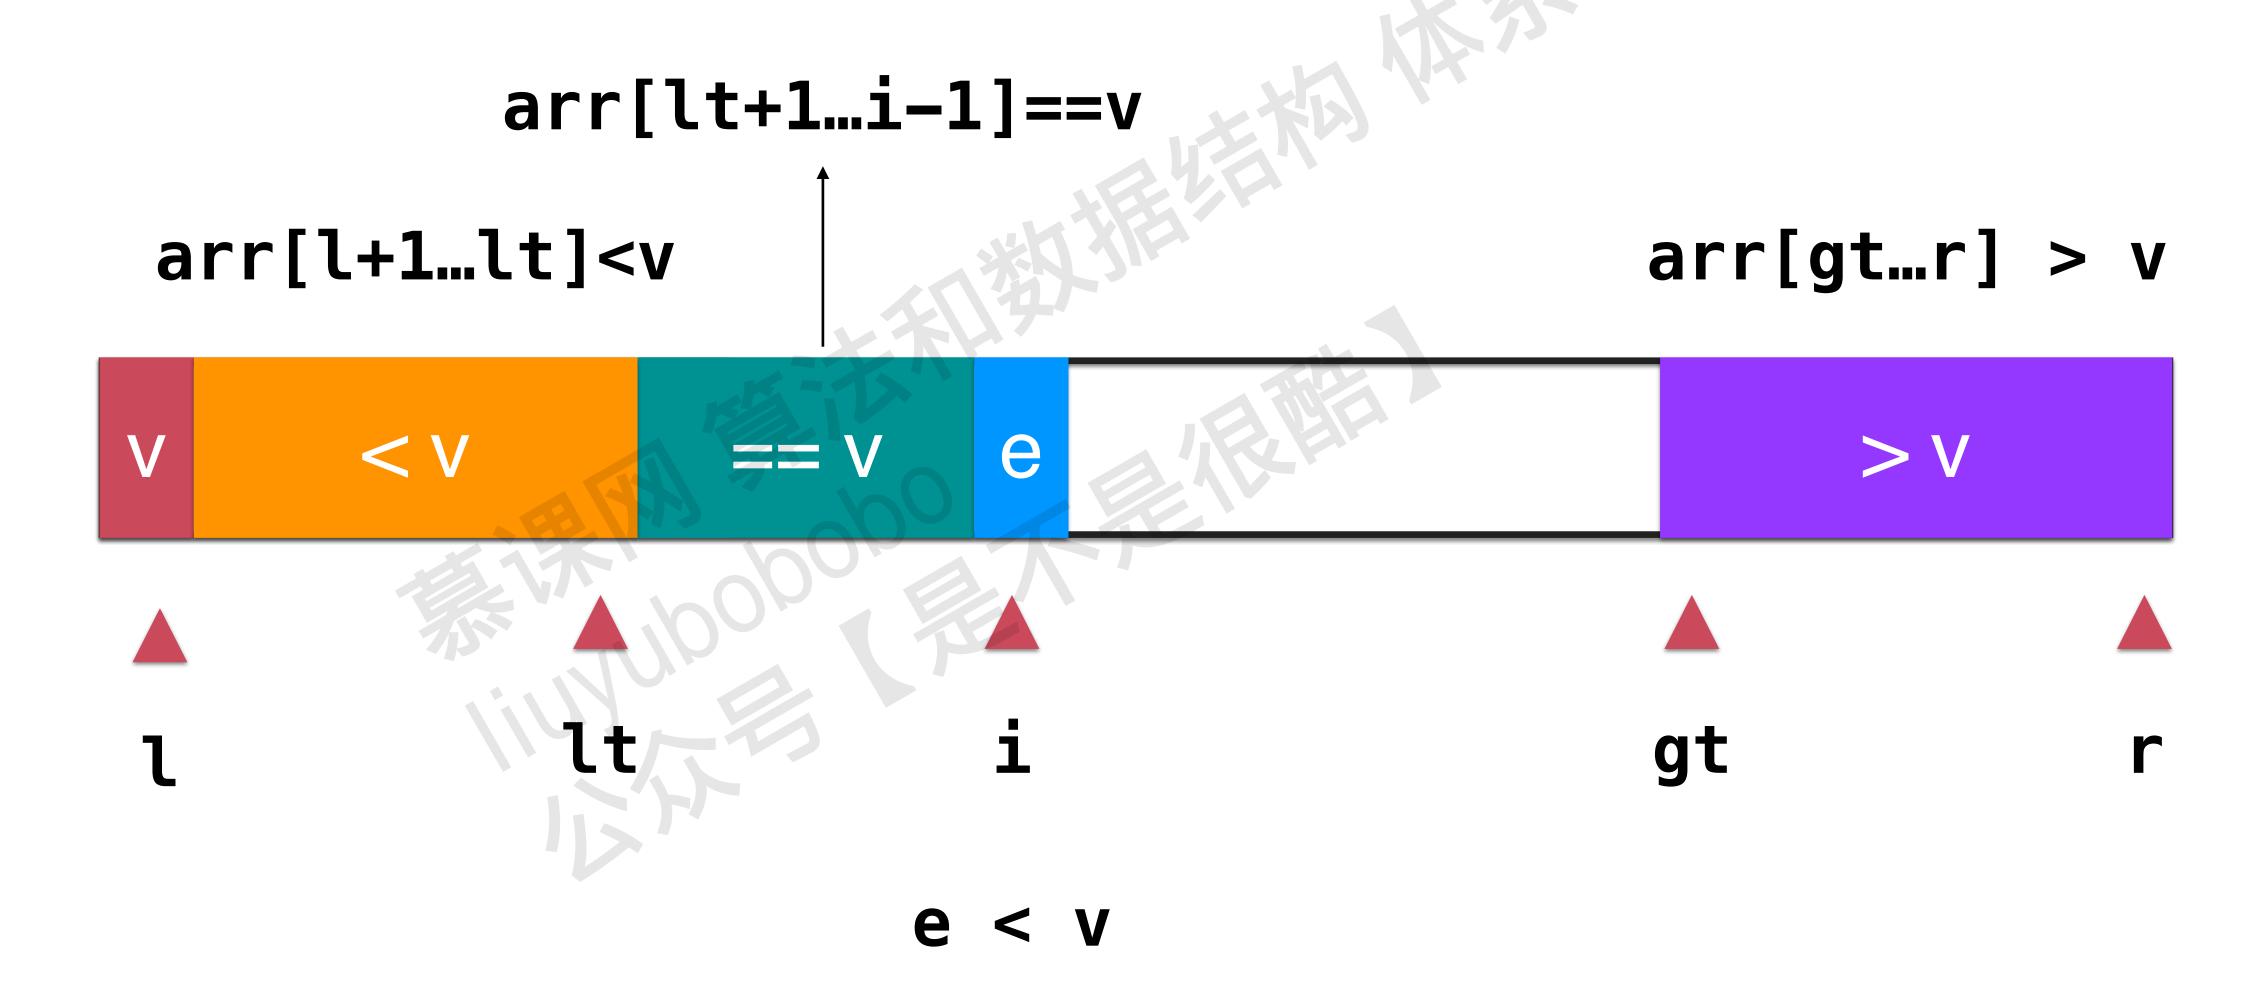

多次调用? 尝试均摊分析

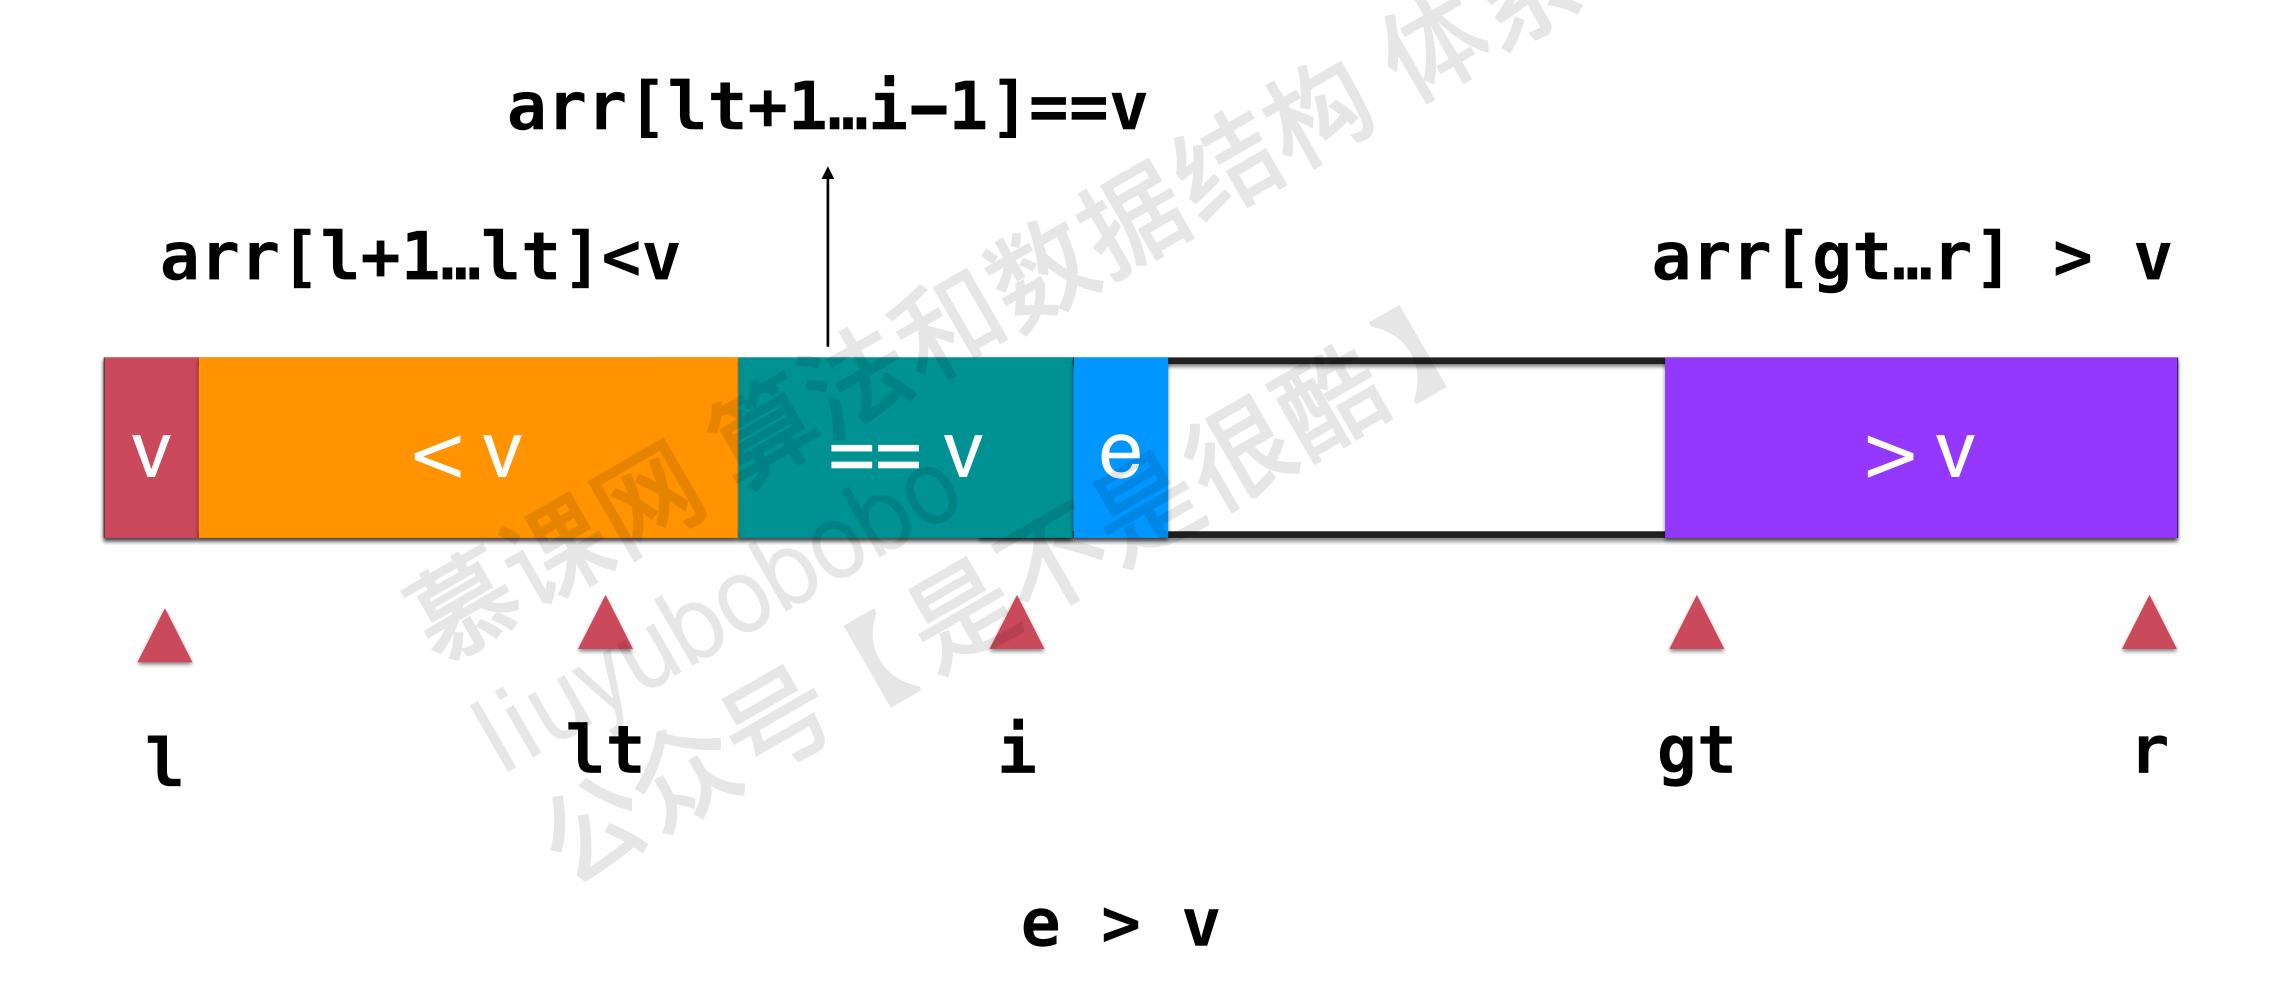

三路快速排序算法

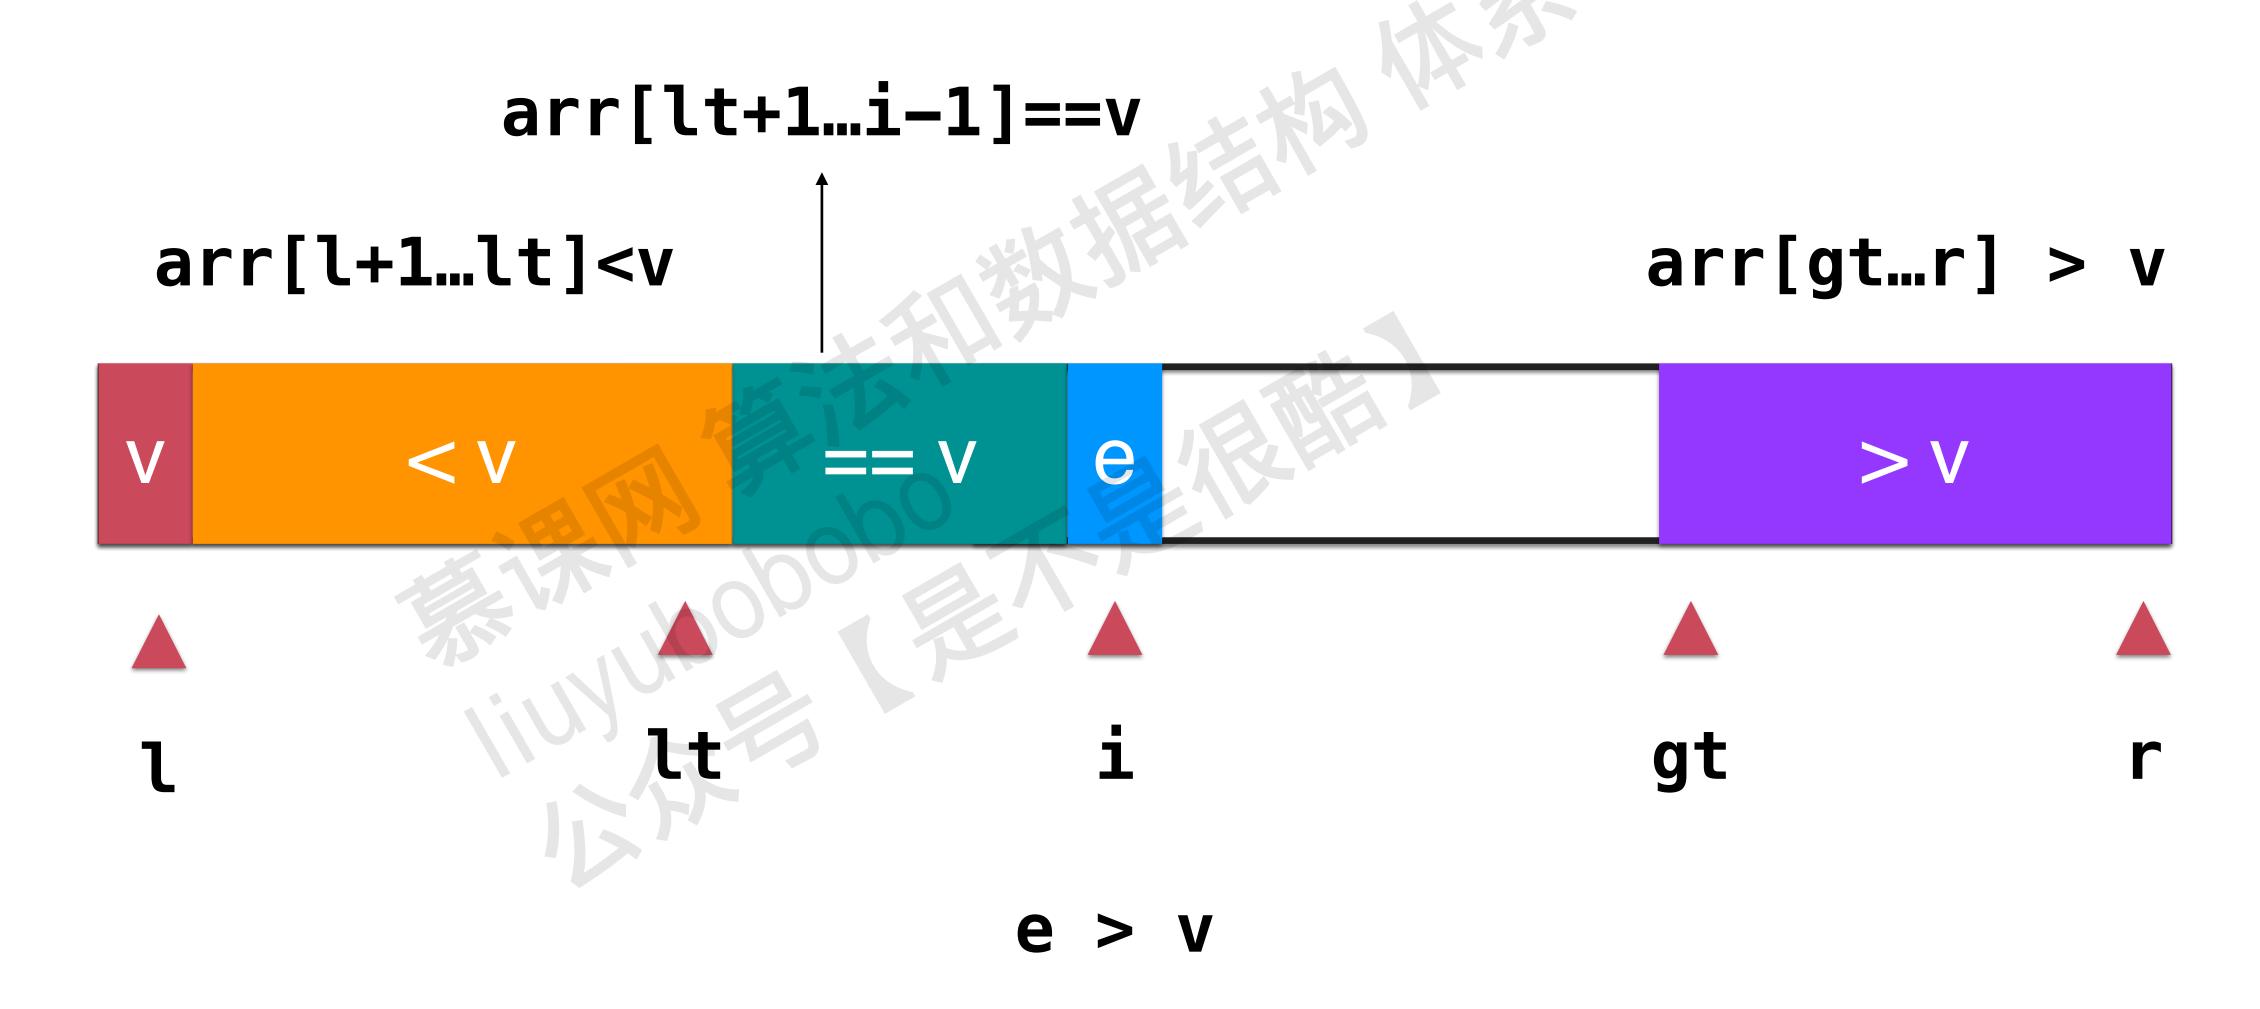

Partition2 arr[l+1...i-1] <= v arr[j+1...r] >= v

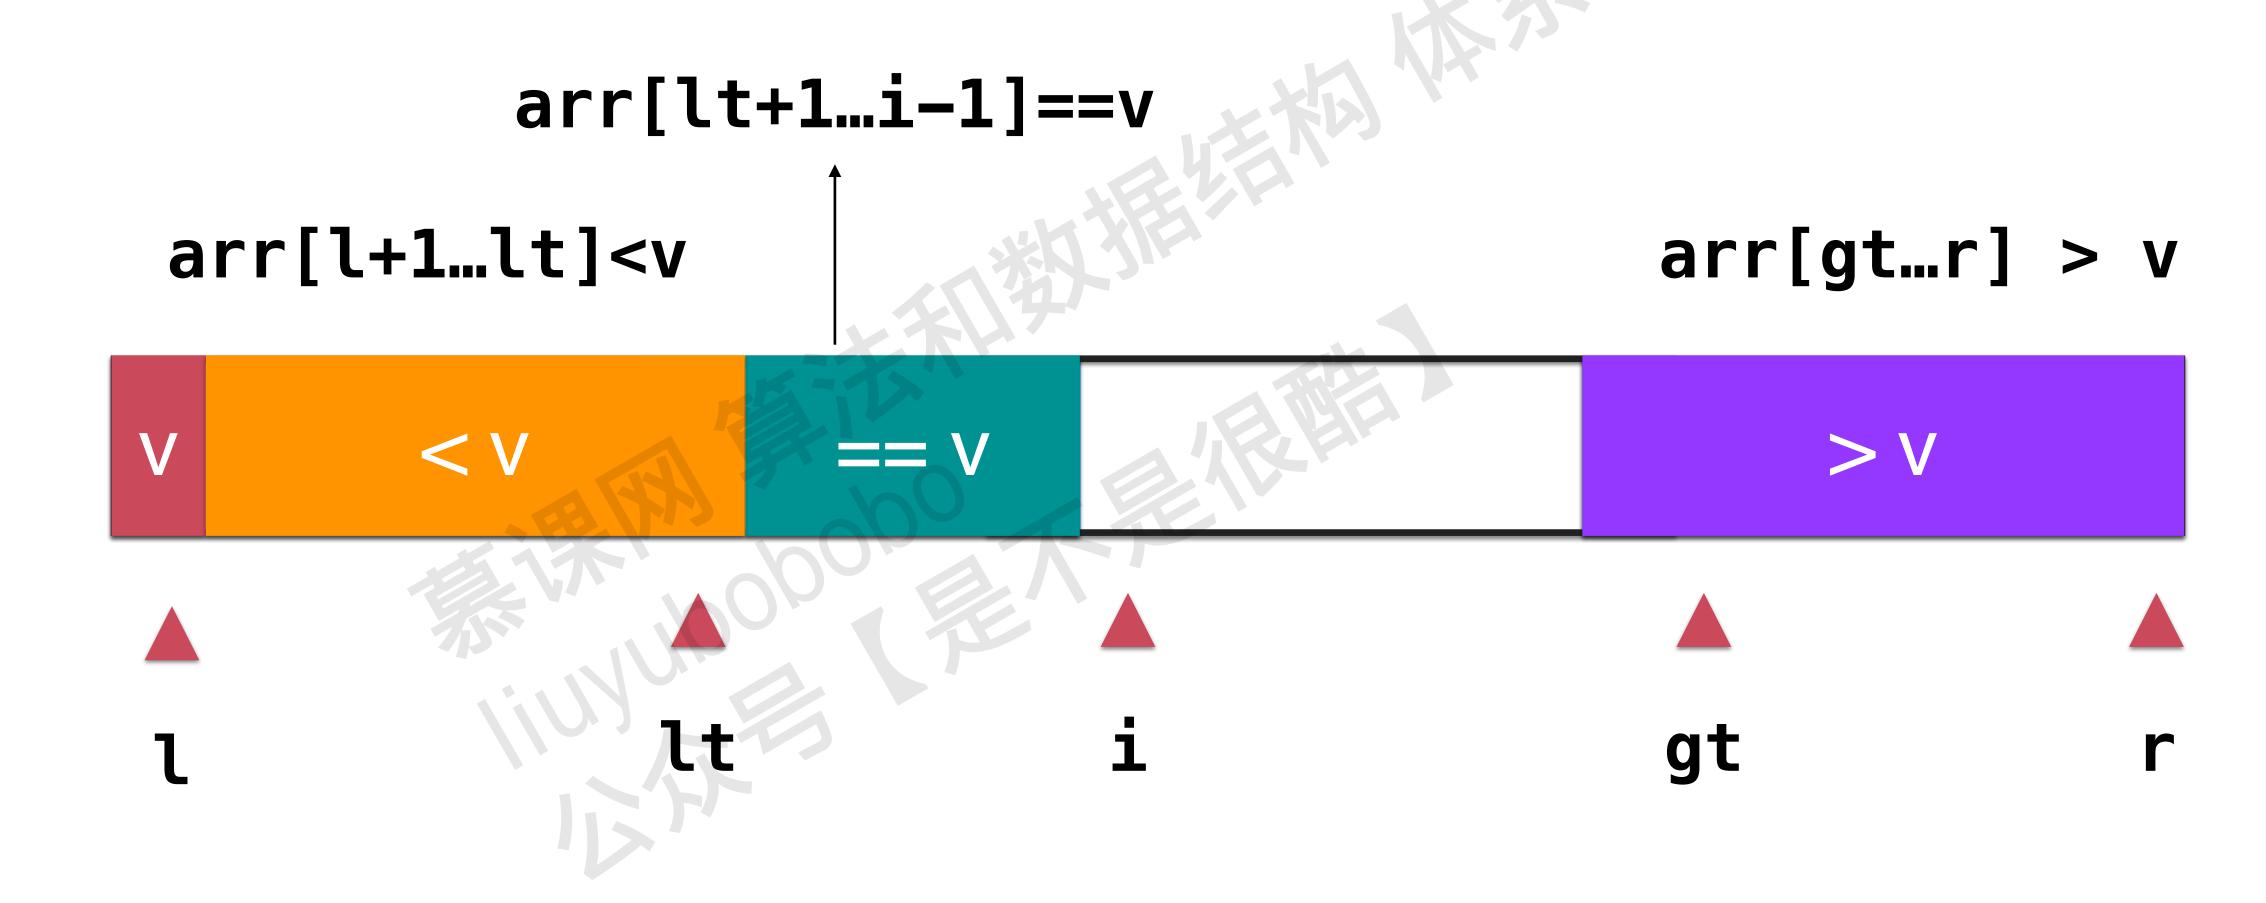

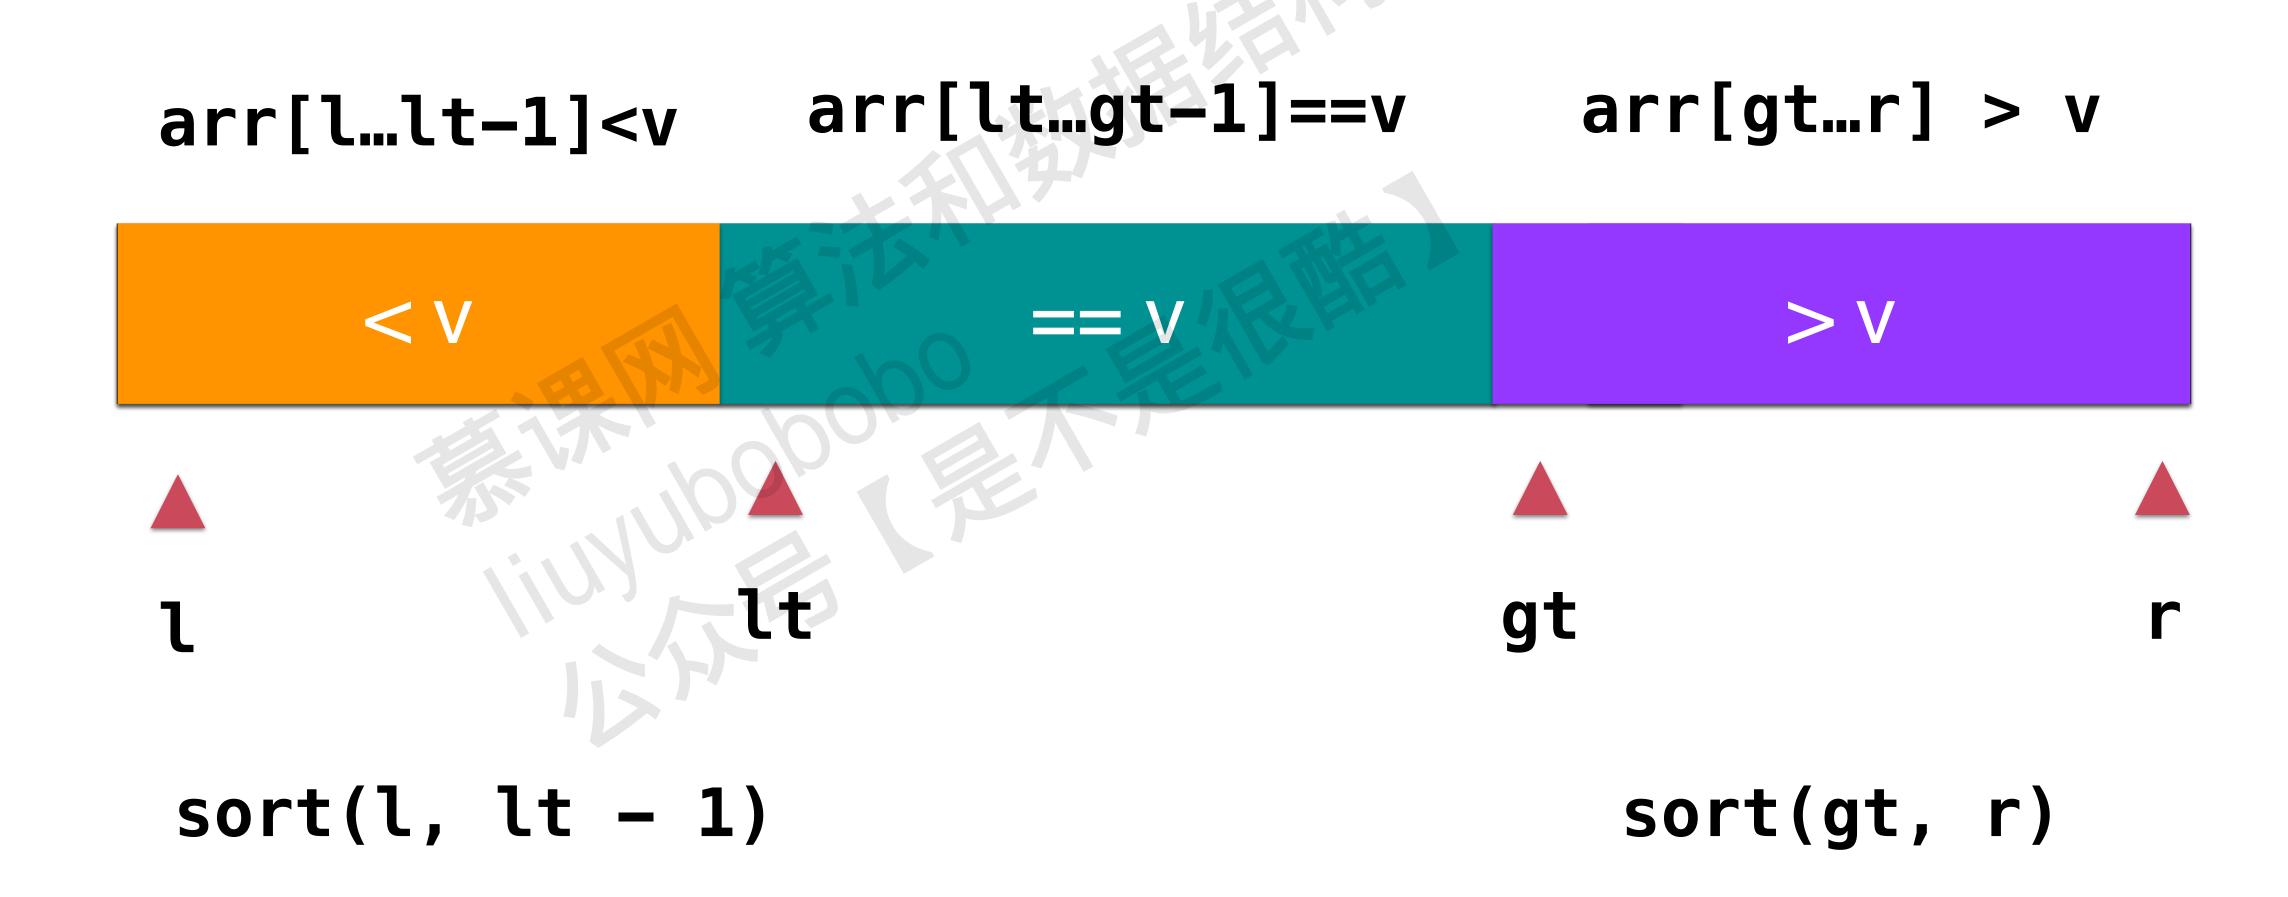

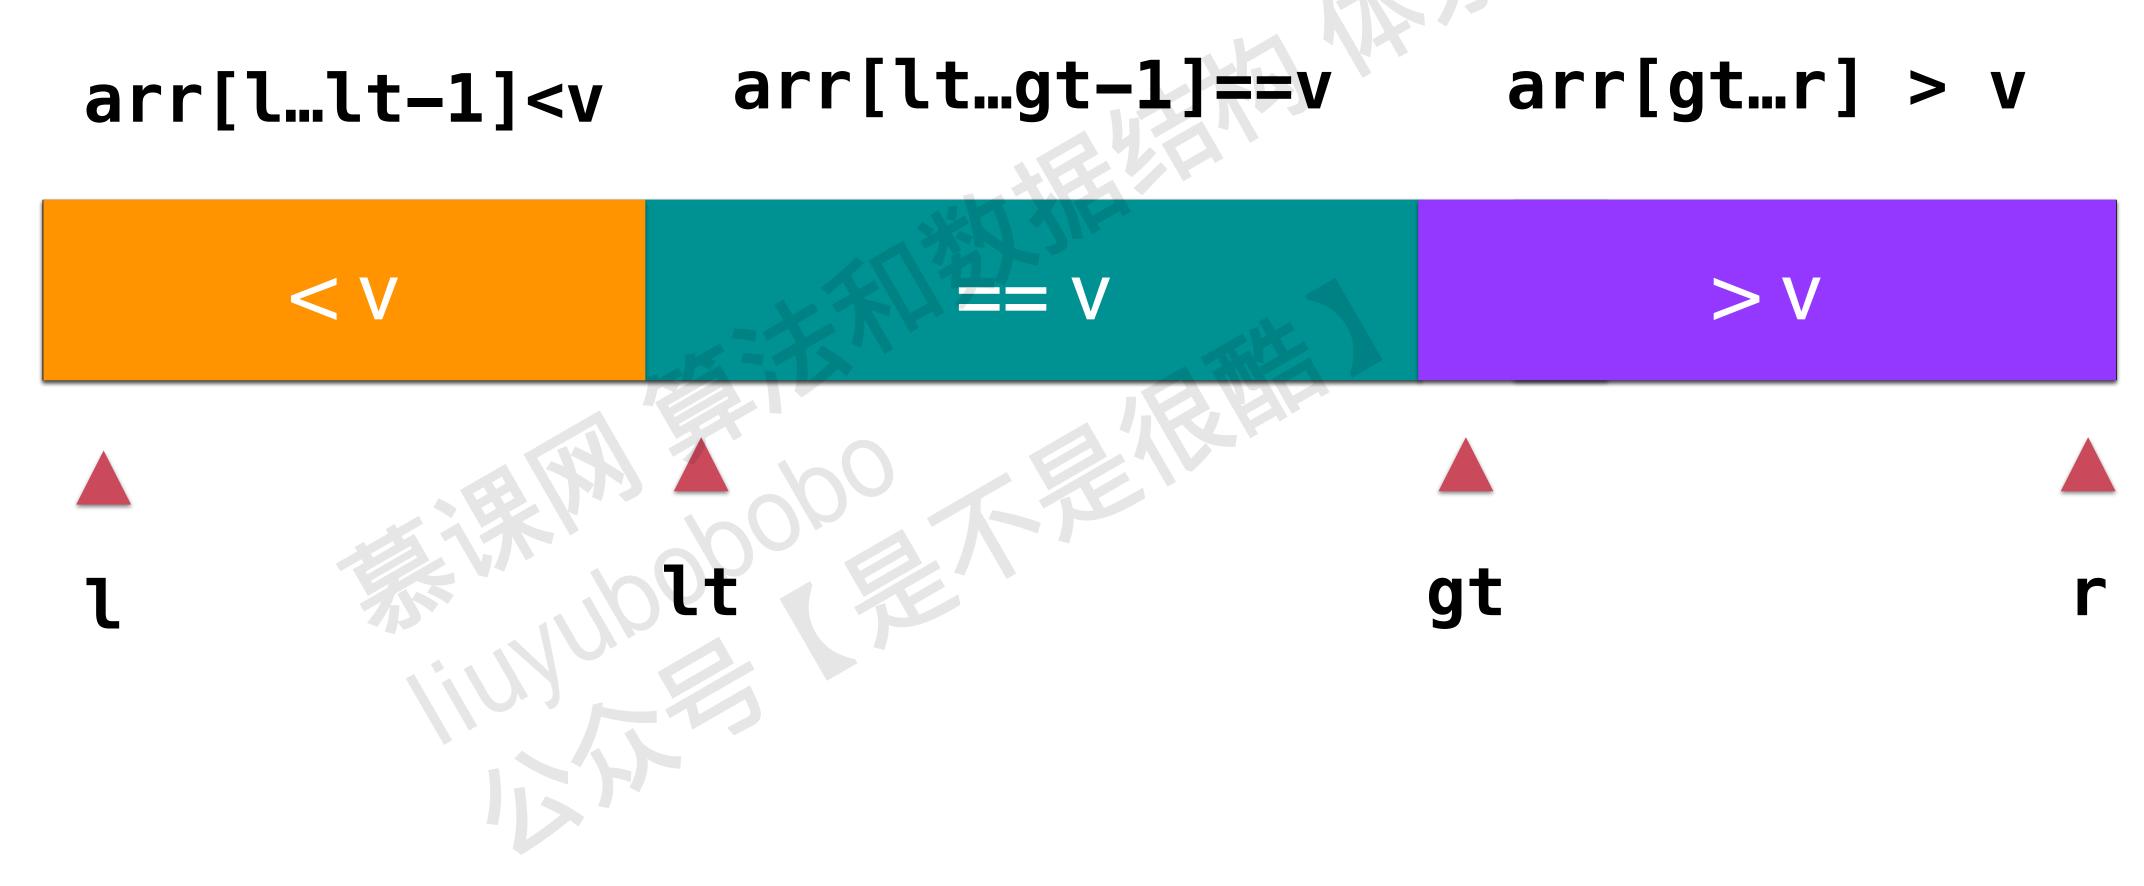

arr[l+1...lt]<v arr[lt+1...i-1]==v arr[gt...r] > v

所有元素都相同的数组: 0(n)

实现三路快速排序算法

作业解析: Sort Colors

Select K

Select K

给出一个无序数组,找出数组的第 K 小的元素

排序; arr[k - 1] 0(nlogn)

使用快速排序算法的思路,可以在 0(n) 时间完成

6 | 2 | 8

到右边找

找到了! 到左边找 < p?

k > p?

< 4

4

$$k == p$$
?

找到了!

k < p?

到左边找

k > p?

到右边找

期望

$$n + n/2 + n/4 + ... + 1$$

$$=2n = 0(n)$$

https://leetcode-cn.com/problems/kth-largest-element-in-an-array/

作业解析: Select K

快速排序整体思想:

单路快速排序

单路快速排序

完全有序的数据退化

引入随机化

引入随机化

所有元素一样的数据退化

双路快速排序

双路快速排序

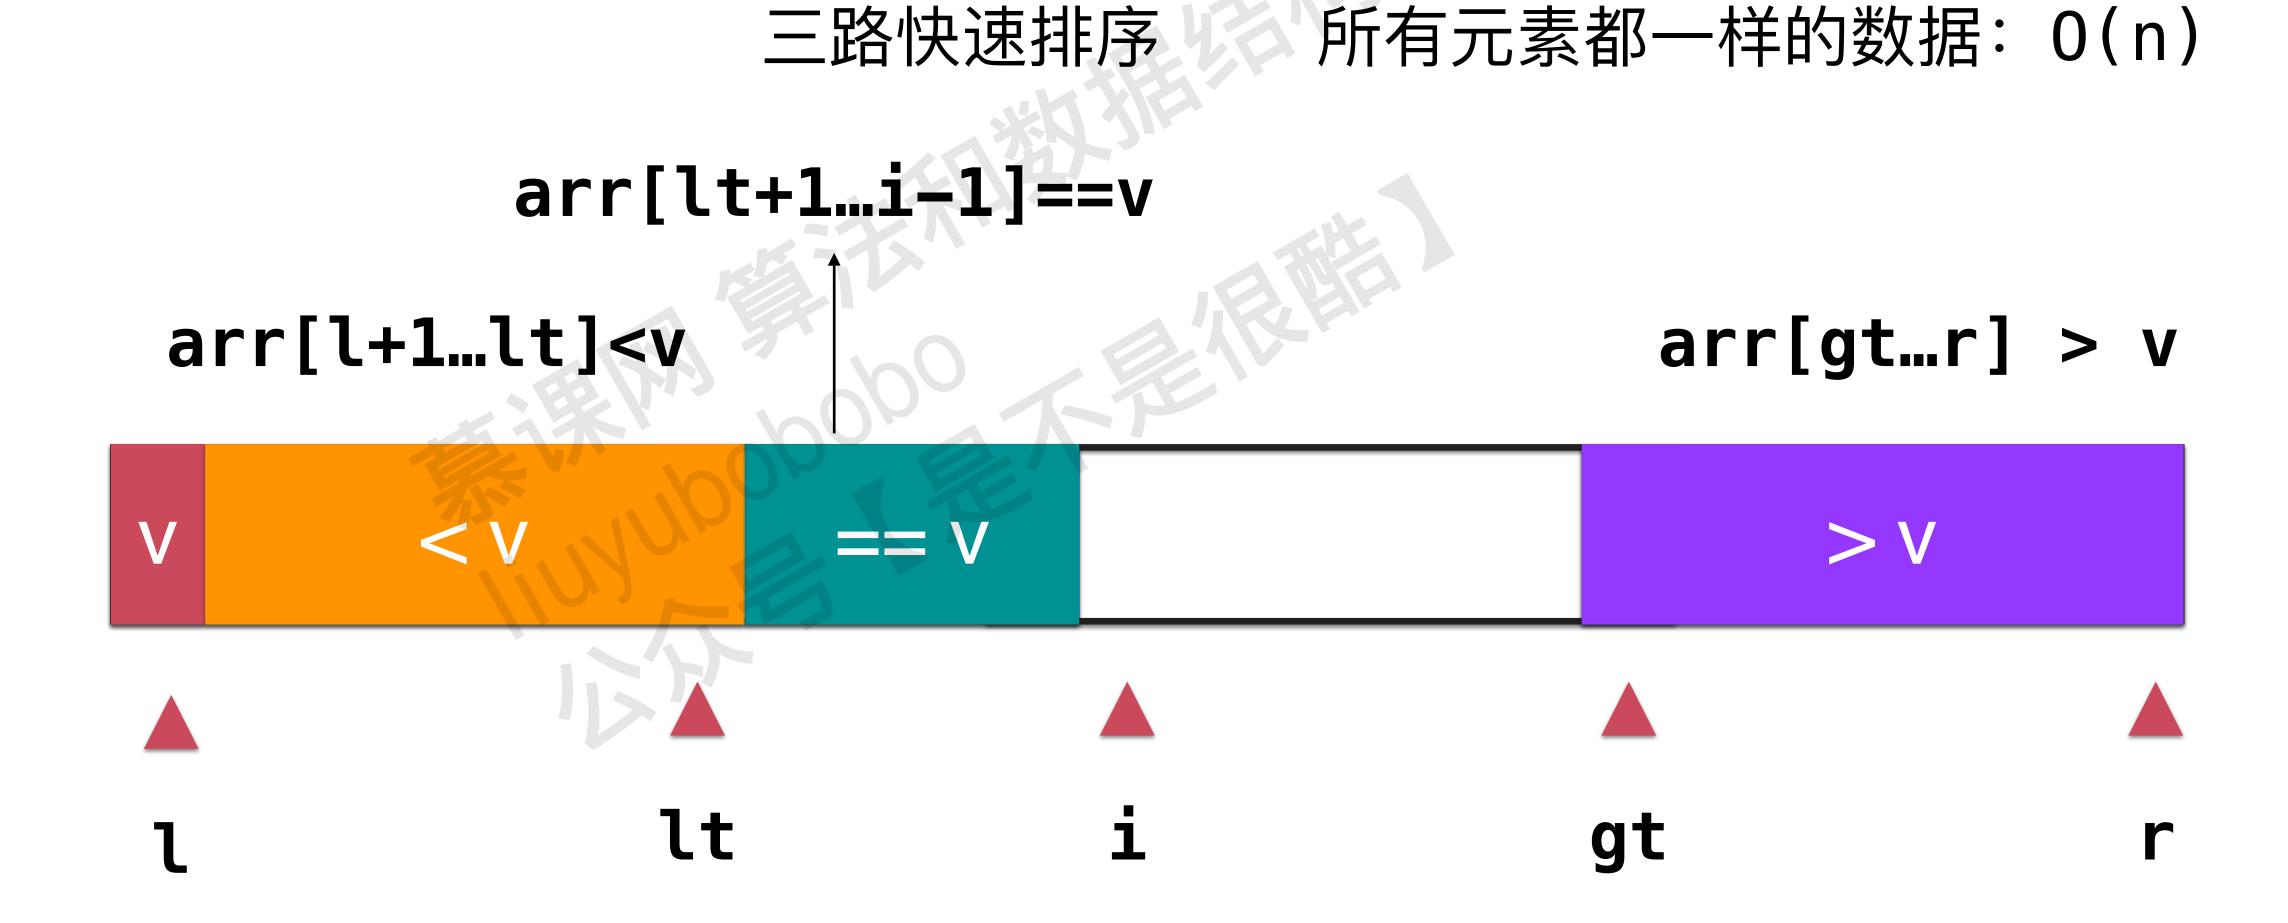

arr[l+1...i-1] <= v arr[j+1...r] >= v

v <= v >= v

i j r

双路快速排序

单路快速排序

随机化

双路快速排序

三路快速排序

普通算法: 看最差 能找到一组数据 100% 恶化

随机算法: 看期望 没有一组数据能 100% 恶化

多次调用? 尝试均摊分析

快速排序算法的思想:

排序

SelectK
